APPENDIX C – *Hyalella azteca* toxicity test data

Hyalella azteca Sediment Test Summary Sheet

Client: Teck Coal
Work Order No.: 211262

Start Date: July 1, 2021
Set up by: KJL/RZS

Sample Information:

Sample ID: Various
Sample Date: June 29, 2021, July 6, July 13, July 20
Date Received: June 30, 2021, July 8, July 14, July 21
Sample Volume: 20L

Test Organism Information:

Species: *Hyalella azteca*
Supplier: Aquatic Biosystems, CO
Date received: June 30, 2021
Age or size (Day 0): 7-8 d

NaCl Reference Toxicant Results:

Reference Toxicant ID: HA200
Stock Solution ID: n/a
Date Initiated: July 1, 2021

96-h LC50 (95% CL): 6.9 (5.6-8.4) g/L NaCl

96-h LC50 Reference Toxicant Mean and Range: 6.1 (3.8-9.8) CV (%): 24

Test Results:

Sample ID	Survival ± SD (%)	Average Dry Wt. ± SD (mg)
Lab Control	96.0 ± 5.5	0.31 ± 0.12
FR-UFR1	92.0 ± 8.4	0.37 ± 0.09

APPENDIX D – *Oncorhynchus mykiss* toxicity test data

Embryo-Alevin Test Summary Sheet

Client: Teck
Work Order No.: 210963
Test Date: May 19 - June 18, 2021
Test Species: *Oncorhynchus mykiss*

Sample Information:

Sample ID: Various - see table below
Sample Date: May 18, 25, June 1, 8 and 15, 2021
Date Received: May 19, 26, June 2, 9 and 16, 2021
Sample Volume: (1-5) x 20 L per refresh

Dilution Water:

Type: Dechlorinated Tap Water
Hardness (mg/L CaCO3): 12 - 17
Alkalinity (mg/L CaCO3): 13 - 15

Test Organism Information:

Batch No: 051921
Source: Ted's Trout, Campbell Lake, BC
Number male broodstock used: 4
Loading Density: 1.24 g/L
Number female broodstock used: 4
Sperm motility check: Verification of sperm motility using a compound microscope

SDS Reference Toxicant Results:

Reference Toxicant ID: RTE156
Stock Solution ID: 21S01
Date Initiated: May 19, 2021
7-d EC50 (95% CL): 5.3 (5.0 - 5.6) mg/L SDS

Reference Toxicant Mean and Range: 4.8 (2.2 - 10.4) mg/L SDS
Reference Toxicant CV (%): 41

Test Results:

This report has been prepared by Nautilus Environmental Company Inc. based on data and/or samples provided by our client and the results of this study are for their sole benefit. Any reliance on the data by a third party is at the sole and exclusive risk of that party. The results presented here relate only to the samples tested.

1.0 INTRODUCTION

Nautilus Environmental conducted toxicity tests for Teck Coal Ltd. (Teck) on samples collected from various locations in the Elk Valley as part of a quarterly toxicity testing program required under the BC Ministry of Environment and Climate Change Strategy permit number 107517.

Stations sampled in the third quarter of 2021 are shown in Figure 1; stations shown as green symbols align with the integrated chronic toxicity testing program, which was designed to eliminate redundancy between Permit 107517 Section 9.8 (ii) and Permit 106970 toxicity testing programs. The integrated program was approved by BC Ministry of Environment and Climate Change Strategy on March 4, 2019 (BC ENV 2019). Species requiring quarterly testing include a include a cladoceran (*Ceriodaphnia dubia*) and a unicellular green alga (*Pseudokirchneriella subcapitata*). On a semi-annual basis, tests using rainbow trout (*Oncorhynchus mykiss*; Q2 and Q4), an amphipod (*Hyalella azteca*; Q2 and Q4), and fathead minnows (*Pimephales promelas*; Q1 and Q3) are also required. Due to the technical laboratory error from the second quarter, the hyalella test was re-initiated in Q3. Figure 1 stations shown as orange symbols align with the upper Fording River chronic toxicity testing program, which is a supplemental study for 2021 to satisfy Section 4D3.6 of Permit 107517. The upper Fording River program includes the same test species and testing frequency as the regional program, except that green alga is not tested.

Water samples used for testing were transported in 20-L plastic containers in coolers containing ice packs. Samples were received at temperatures ranging from 2.8 to 16.9°C and were stored in the dark at 4 ± 2°C prior to testing. Table 1 summarizes the toxicity tests that were conducted on each sample as well as sample collection dates. Samples were collected weekly on the dates shown in Table 1 for the duration of the *P. promelas* and *H. azteca* tests. The *C. dubia*, *P. subcapitata*, and *H. azteca* tests were conducted at the Nautilus Environmental laboratory in Burnaby, BC. The *P. promelas* test was conducted at the Nautilus Environmental laboratory in Calgary, AB.

This report presents the results of the toxicity tests. Copies of laboratory data sheets and printouts of statistical analyses are provided in Appendices A through D. The chain-of-custody forms are provided in Appendix E. Results of analytical chemistry that was performed on the samples tested in this program are uploaded by Teck to the Environmental Management System database. Analytical chemistry samples were collected by Teck personnel at the same time the samples were collected for toxicity testing.

* Site water controls

Upper Fording River samples from the supplemental study for 2021

‡ Testing with *C. dubia* and *P. subcapitata* was conducted with water collected on August 8th; testing with *H. azteca* was conducted with water collected August 8th – 31st; testing with *P. promelas* was conducted with water collected August 8th – September 7th.

2.0 METHODS

Methods for the toxicity tests using *C. dubia*, *P. subcapitata, P. promelas* and *H. azteca* are summarized in Tables 2-5. Laboratory control water was prepared using deionized water with 20% Perrier for *C. dubia*; deionized water with supplemented nutrients for *P. subcapitata*; dechlorinated City of Calgary municipal tap water with the addition of 4 mg/L potassium chloride (KCl) for *P. promelas*. In accordance with a recipe provided in Environment Canada (2013), water for *H. azteca* was prepared by adding reagent grade salts to dechlorinated Metro Vancouver municipal tap water.

For *C. dubia*, the test protocol specifies that test duration must be 7 ± 1 day, with the test being terminated on the day that at least 60% of control organisms have produced three broods. To provide additional information on reproduction patterns in the samples, and as requested by Teck, the tests were extended to 8 days, regardless of when 60% of controls had produced three broods. The results reported below were calculated based on the specifications of the test method, which in this case was based on the reproduction that had been observed up to Day 7 of exposure. The additional information on reproduction up to Day 8 of exposure is available in Appendix A.

As requested by Teck, site water used in the tests with *P. promelas* were amended with either 10, 15, or 20 µg/L of copper (concentrations provided by Golder depending on the hardness, pH and DOC of each sample) to reduce the potentially confounding effects of microbial growth. Fathead minnows are susceptible to adverse effects of fungi and microbes (Grothe and Johnson, 1996; Kszos et al., 1997; Downey et al., 2000). Results of toxicity tests and Toxicity Identification Evaluation efforts conducted in 2015 indicated that artefactual toxicity (i.e., adverse effects that were not associated with toxicants in the sample) had occurred in fathead minnow tests using ambient water samples from the Elk Valley. Amendment of the samples with a low dose of copper appeared to counteract this effect. Consequently, samples were amended with copper for the *P. promelas* tests in order to reduce the potential adverse effects caused by fungi and microbes.

The fathead minnows were evaluated for potential microbial growth during daily replenishments and test termination (Nautilus, 2020). Microbial growth is noted on the bench sheets at every instance of visual confirmation of a superficial fungus-like growth around the gill region and/or surrounding the surfaces of the test organisms, and high mortality that is not consistent across replicates, as described in Downey et al. (2000).

For the *H. azteca* tests, all site waters were supplemented with 25 mg/L chloride and 0.02 mg/L bromide using NaCl and NaBr, respectively, in accordance with recommendations by the Hyalella Advisory Group (chaired by Chris Ingersoll, USGS; Norberg-King et al., 2014). Insufficient concentrations of these halides are known to impair growth of this species. The laboratory control water contained approximately 75 mg/L chloride and 0.8 mg/L bromide

Statistical analyses were performed using CETIS (Tidepool Scientific Software, 2013), and involved comparison of results to both the laboratory and site water controls.

Table 2. Test conditions: *Ceriodaphnia dubia* survival and reproduction test.

Test species	*Ceriodaphnia dubia*
Organism source	In-house culture
Organism age	<24-hour old neonates, produced within a 12-hour window
Test type	Static-renewal
Test duration	8 days[1]
Test vessel	20-mL glass test tube
Test volume	15 mL
Test solution depth	10 cm
Test concentrations	100% (undiluted) sample, plus laboratory control
Test replicates	10 per treatment
Number of organisms	1 per replicate
Control water	20% Perrier water and 80% deionized water + 5 µg/L Se and 2 µg/L vitamin B12
Test solution renewal	Daily (100% renewal)
Test temperature	25 ± 1°C
Feeding	Daily with *Pseudokirchneriella subcapitata* and TCC[2] (3:1 ratio)
Light intensity	100 to 600 lux at water surface
Photoperiod	16 hours light / 8 hours dark
Aeration	None
Test measurements	Temperature, dissolved oxygen, pH and conductivity measured daily; hardness and alkalinity of undiluted sample measured at test initiation; survival and reproduction checked daily
Test protocol	Environment Canada (2007a), EPS 1/RM/21
Statistical software	CETIS Version 1.9.4
Test endpoints	Survival and reproduction
Test acceptability criteria for controls	≥80% survival; ≥15 young per surviving control producing three broods; ≥60% of controls producing three or more broods; no ephippia present
Reference toxicant	Sodium chloride (NaCl)

[1] Test duration was extended to 8 days to provide additional information on patterns of reproduction. Summarized data and calculated endpoints are based on results from Day 7, according to the standard test procedure; however, all of the data through 8 days are provided in Appendix A.

[2] TCC = Trout Chow + cerophyl

Table 3. Test conditions: *Pseudokirchneriella subcapitata* growth inhibition test.

Test species	*Pseudokirchneriella subcapitata*, strain CPCC# 37
Organism source	In-house axenic culture, obtained from Canadian Phycological Culture Center, and originally isolated from Nivelta River, Norway.
Organism age	3-to 7-day old culture in logarithmic growth phase
Test type	Static
Test duration	72 hours
Test vessel	Microplate
Test volume	220 µL
Test concentrations	Full strength sample diluted to 95.2% (v/v) by addition of nutrients, plus laboratory control
Test replicates	4 per treatment; 8 for laboratory control and site controls
Number of organisms	10,000 cells/mL
Control water	Deionized water supplemented with nutrients
Test solution renewal	None
Test temperature	24 ± 2°C
Feeding	None
Light intensity	3600 to 4400 lux
Photoperiod	24 hours light
Aeration	None
Test measurements	Test area temperature measured daily; temperature and pH measured at test initiation; pH of two control wells measured at test termination
Test protocol	Environment Canada (2007b), EPS 1/RM/25
Statistical software	CETIS Version 1.9.4
Test endpoints	Algal cell growth inhibition
Test acceptability criteria for controls	>16-fold increase in number of algal cells; CV ≤ 20%; no trend when analyzed using Mann-Kendall test
Reference toxicant	Zinc (added as $ZnSO_4$)

Table 4. Test conditions: 32-day fathead minnow *(Pimephales promelas)* survival and growth test.

Test species	*Pimephales promelas*
Organism source	Aquatox Inc., AR
Organism age	<24 hours
Test type	Static-renewal
Test duration	From egg stage until 28 days post hatch
Test vessel	1-L glass jar
Test volume	1 L
Test concentrations	100% (undiluted) sample amended with 10, 15, or 20 µg/L Cu, plus laboratory control and control amended with 10, 15, or 20 µg/L Cu
Test replicates	4 per treatment
Number of organisms	10 per replicate
Control water	Dechlorinated City of Calgary municipal tapwater amended with 4 mg/L KCl.
Test solution renewal	Daily (80% renewal)
Test temperature	25 ± 1°C
Feeding	Twice a day, after hatch, with newly hatched brine shrimp (*Artemia* nauplii)
Light intensity	100 to 500 lux
Photoperiod	16 hours light / 8 hours dark
Aeration	None unless dissolved oxygen fell to less than 60% saturation
Test measurements	Temperature, dissolved oxygen, pH and conductivity measured daily; hardness and alkalinity measured upon arrival; survival and any incidence of fungal growth on the test organisms recorded daily
Test protocol	US EPA (1996) and ASTM (2013)
Statistical software	CETIS Version 1.9.4
Test endpoints	Hatch, survival, length, biomass, normal development (which assesses incidence of deformities)
Test acceptability criteria for controls	>66% hatch, ≥70% post-hatch survival
Reference toxicant	Sodium chloride (NaCl)

Table 5. Test conditions: *Hyalella azteca* survival and growth test.

Test species	*Hyalella azteca*
Organism source	Aquatic Biosystems, CO
Organism age	7- to 8-days old
Test type	Static-renewal
Test duration	28 days
Test vessel	375-mL glass container
Test volume	300 mL
Test concentrations	100% (undiluted) samples amended with 25 mg/L Cl and 0.02 mg/L Br, plus laboratory control
Test replicates	5 per treatment
Number of organisms	10 per replicate
Control water	Reconstituted water containing ~75 mg/L Cl and 0.8 mg/L Br (Environment Canada 2013). Samples were supplemented with 25 mg/L Cl and 0.02 mg/L Br.
Test solution renewal	Twice daily (~80% renewal)
Test temperature	23 ± 1°C
Feeding	1 mL of YCT daily to each container. Tetramin daily, with amounts increasing weekly; Week 1: 0.25 mg, Week 2: 0.5 mg, Week 3: 1 mg, Week 4: 1.5 mg in each test container.
Light intensity	500 to 1000 lux at water surface
Photoperiod	16 hours light / 8 hours dark
Aeration	None
Test measurements	Temperature, dissolved oxygen, pH and conductivity measured daily; hardness and alkalinity measured upon arrival; hardness and alkalinity measured at test termination; total ammonia measured at test initiation and termination
Test protocol	Modified from US EPA (2000), as described in Norberg-King et al. (2014)
Statistical software	CETIS Version 1.9.4
Test endpoints	Survival and dry weight
Test acceptability criteria for controls	Mean control survival of ≥80%, dry weight ≥0.10 mg
Reference toxicant	Sodium chloride (NaCl)

3.0 RESULTS

3.1 *Ceriodaphnia dubia*

Results of the toxicity tests using *C. dubia* are provided in Table 6. The site water control samples from FR_UFR1, GH_ER2, CM_MC1 and LC_SLC performed similarly to the laboratory control, indicating that there were no adverse effects associated with the upstream stations.

There were no adverse effects on survival in any of the samples tested; survival ranged between 80 and 100%. Significantly lower reproduction relative to one or more controls was observed in FR_FRCP1, LC_DCDS and FR_FR4.

3.2 *Pseudokirchneriella subcapitata*

Results of the toxicity tests using *P. subcapitata* are provided in Table 7. The cell yield in site controls FR_UFR1, GH_ER2, CM_MC1 and LC_SLC was 2.9- to 3.0-fold greater than the laboratory control. This finding is not unusual, since the higher ionic strength associated with the site water controls would be expected to stimulate cell growth of this species relative to the very low ionic strength associated with the laboratory control water.

Significantly lower cell yield relative to one or more site controls was observed in FR_FRABCH, GH_ERC, EV_HC1, LC_DCDS and LC_LC3. Growth stimulation was observed in all samples tested compared to the laboratory control. Percent stimulation ranged between 106.9 and 203.3%.

3.3 *Pimephales promelas*

Results of the toxicity tests using *P. promelas* are provided in Table 8. Relative to the laboratory control, there were no adverse effects observed in the copper-amended controls for hatch rate, biomass, or normal development. An adverse effect on survival relative to the laboratory control or one or more copper-amended controls was observed in site control FR_UFR1. Decreased length relative to the laboratory control or one or more copper-amended controls was observed in site controls GH_ER2 and CM_MC1.

There were no adverse effects observed on hatch rate or normal development for any samples tested. Adverse effects on survival in downstream stations relative to one or more controls were observed in samples EV_HC1 and LC_LCDSSLC. Decreased biomass relative to one control was observed in EV_HC1. Decreased length relative to one or more control was observed in FR_FRCP1, GH_FR1, RG_MIDAG, EV_MC2, FR_FR4, FR_FR2, FR_MULTIPLATE and FR_FRRD.

Microbial growth was observed on test organisms in one or more replicates of all samples except EV_MC2 and LC_DCDS suggesting that the copper dose employed in these samples was not sufficient to curtail microbial effects. Instances of microbial growth were observed as early as day 3 of the test and observations persisted as late day 20. Patterns of mortality are consistent with previous observations microbial growth.

3.4 *Hyalella azteca*

Results of the toxicity tests using *H. azteca* are provided in Table 9. Survival among site controls FR_UFR1, GH_ER2, CM_MC1 and LC_SLC was similar to the laboratory control, however, dry weight of FR_UFR1, GH_ER2, and LC_SLC was significantly lower than the laboratory control.

Significantly lower survival, relative to all controls, was observed in CM_MC. All of the samples tested had significantly lower dry weight relative to one or more controls, except of RG_MIDAG and EV_HC1.

§ Result was significantly lower than the LC_SLC site control

4.0 QA/QC

The health histories of the test organisms used in the exposures were acceptable and met the requirements of the test protocols. Tests met all control acceptability criteria and water quality parameters remained within ranges specified in the protocol throughout the tests. There were no other deviations from the test methodologies, other than the planned modifications to the *C. dubia*, *H. azteca* and *P. promelas* tests, as described in Section 2.0. Uncertainty associated with the test is best described by the standard deviation around the mean.

Results of the reference toxicant tests conducted during the testing program are summarized in Table 10. Results of the *C. dubia*, *P. subcapitata*, *H. azteca* and the *P. promelas* growth endpoint fell within the acceptable range for organism performance of two standard deviations around the mean, based on historical results obtained by the laboratory with these tests. The *P. promelas* survival result of the reference toxicant test fell outside of two standard deviations of the historical mean; this is expected to happen 5% of the time. An investigation occurred and all testing and culturing procedures were followed appropriately. The sensitivity of the organisms used in these tests was appropriate.

Table 10. Reference toxicant test results.

Test species	Endpoint	Historical mean (2 SD Range)	CV (%)	Test date
C. dubia	Survival (LC50): 2.0 g/L NaCl	2.0 (1.8-2.2)	5	August 10, 2021
	Reproduction (IC50): 1.8 g/L NaCl	1.8 (1.4-2.3)	13	
P. subcapitata	Growth (IC50): 28.3 µg/L Zn	32.0 (26.8 – 38.3)	9	August 4, 2021
P. promelas	Survival (LC50): 3.9 g/L NaCl	6.3 (4.1-9.7)	14.1	August 17, 2021
	Biomass (IC25): 2.3 g/L NaCl	3.7 (2.2-6.2)	17.2	
H. azteca	Survival (LC50): 6.9 g/L NaCl	6.2 (3.9-9.8)	23	August 12, 2021

SD = Standard Deviation, CV = Coefficient of Variation, LC = Lethal Concentration, IC = Inhibition Concentration

APPENDIX A – *Ceriodaphnia dubia* Toxicity Test Data

Ceriodaphnia dubia Summary Sheet

Client: TECK
Work Order No.: 211567

Start Date/Time: August. 11/21 @ 1500h
Set up by: SAK/JZL

Sample Information:

Sample ID: Various - see below
Sample Date: ~~Aug. 10/21~~ Aug. 10/21
Date Received: Aug. 11/21
Sample Volume: Various

Test Validity Criteria:

1) Mean survival of first generation controls is ≥80 %
2) At least 60% of controls have produced three broods within 8 days
3) An average of ≥15 live young produced per surviving female in the control solutions during the first three broods.
4) Invalid if ephippia observed in any control solution at any time.

WQ Ranges:

T (°C) = 25 ± 1; DO (mg/L) = 3.3 to 8.4 ; pH = 6.0 to 8.5

Test Organism Information:

Broodstock No.: BB080421A ~~+B~~, ~~BB080521~~ BB072921A+B
Age of young (Day 0): <24-h (within 12-h)
Avg No. young in first 3 broods of previous 7 d: 30
Mortality (%) in previous 7 d: 6
Individual female # used ≥8 young on test day: ~~#~~ 1, 3-10, 12-19', ~~#~~ 3, 5-7, 12, 14-18, 21-23, 26

NaCl Reference Toxicant Results:

Reference Toxicant ID: Cd291
Stock Solution ID: 21NaCl2
Date Initiated: Aug. 10/21

7-d LC50 (95% CL): 2.0 (1.7 - 2.3) g/L NaCL
7-d IC50 (95% CL): 1.8 (1.4 - 1.9) g/L NaCL

7-d LC50 Reference Toxicant Mean and Historical Range: 2.0 (1.8-2.2) g/L NaCL CV (%): 5
7-d IC50 Reference Toxicant Mean and Historical Range: 1.8 (1.4 - 2.3) g/L NaCL CV (%): 13

Test Results:

	Survival (%)	Reproduction (Mean ± SD)
Negative Control	100	22.2 ± 3.8
FR_UFR1	100	22.1 ± 3.3
GH-ER2	90	21.0 ± 7.7
CM-MC1	100	23.0 ± 4.0
LC_SLC	100	23.0 ± 4.3
FR_FRABCH	100	19.1 ± 3.4
FR-FRCP1	90	12.7 ± 7.4 a,b,c,d
GH-FR1	100	19.1 ± 3.8

Ceriodaphnia 7-d Survival and Reproduction Test

Nautilus Environmental

Batch ID:	09-9771-6958	**Test Type:**	Reproduction-Survival (7d)	**Analyst:**	Sierra Klueppel
Start Date:	11 Aug-21 15:00	**Protocol:**	EC/EPS 1/RM/21	**Diluent:**	20% Perrier Water
Ending Date:	19 Aug-21 13:00	**Species:**	Ceriodaphnia dubia	**Brine:**	
Test Length:	7d 22h	**Taxon:**	Branchiopoda	**Source:**	In-House Culture **Age:** <24

APPENDIX B – *Pseudokirchneriella subcapitata* Toxicity Test Data

Pseudokirchneriella subcapitata Summary Sheet

Client: TECK
Work Order No.: 211566

Start Date: Aug. 12/21 @1500h
Set up by: SAK

Sample Information:

Sample ID: various - see below
Sample Date: August. 10/21
Date Received: August. 11/21
Sample Volume: various

Test Organism Information:

Culture Date: August. 6/21
Age of culture (Day 0): 6d

Zinc Reference Toxicant Results:

Reference Toxicant ID: SC218
Stock Solution ID: 21Zn01
Date Initiated: Aug. 4/21

72-h IC50 (95% CL): 28.3 (24.7 - 32.2) µg/L Zn

72-h IC50 Reference Toxicant Mean and Range: 32.0 (26.8 - 38.3) µg/L Zn CV (%): 9

Test Results:

	Cell Yield (Mean± SD)
Negative Control	33.1 ± 3.5
FR-UFR1	95.8 ± 12.4
GH-ER2	97.4 ± 8.4
CM-MC1	100.4 ± 8.7
LC-SLC	99.4 ± 9.2
FR-FRABCH	83.8 ± 7.2 c,d
FR-FRCP1	89.8 ± 11.6
GH-FR1	87.0 ± 10.8
GH-ERC	75.0 ± 7.5 a,b,c,d

All samples are significantly greater than the lab control.
Results that are significantly lower than

a = FR-UFR1
b = GH-ER2
c = CM-MC1
d = LC-SLC

APPENDIX C – *Pimephales promelas* Toxicity Test Data

32-d Fathead Minnow Survival and Growth Test

Client: Teck
Work Order No.: NA
Test Date: 13-Aug-21
Test Species: *Pimephales promelas*

Sample Information:

Sample ID: Various - see table below
Sample Date: Tuesday, August 10th
Date Received: Wednesday, August 11th

Dilution Water:

Type: Dechlorinated Tap Water (amended with 4 mg/L KCl)
Temperature (°C): 24°C
pH: 8
Conductivity: 367
Dissolved Oxygen (mg/L): 7.5
Hardness (mg/L CaCO3): 162
Alkalinity (mg/L CaCO3): 141

Test Organism Information:

Batch No: 20210813FM-ELS
Source: Aquatox
Age: <24 hours post fertilization
Receipt temperature: 28°C
Acclimation Rate: N/A
Swim bladder inflated at test initiation? (Y/N): N/A
Breeding stock mortality during the week prior to test initiation (%): N/A
Breeding stock mortality on weekly basis: N/A
Incidence of disease: No

NaCl Reference Toxicant Results:

Reference Toxicant ID: QA177
Stock Solution ID: NA
Date Initiated: August 17, 2021
7-d LC50 (95% CL): 3.9 (3.3 - 4.5) g/L NaCl
7-d IC25 (95% CL): 2.3 (1.7 - 3.2) g/L NaCl

Survival

Reference Toxicant Mean and Range: 6.3 (4.1 - 9.7) g/L NaCl (14.1% CV)

Biomass

Reference Toxicant Mean and Range: 3.7 (2.2 - 6.2) g/L NaCl (17.2% CV)

Test Results:

Sample ID	Hatch (%) (Mean ± SD)	Biomass (mg) (Mean ± SD)	Length (mm) (Mean ± SD)	Normality (%) (Mean ± SD)	32 day survival (%) (Mean ± SD)
