Note: Annual summary statistics based on monthly means.

Table B.12: Average Flow of the Elk River (Fernie) and the Kootenay River (Fort Steele), 2014 to 2016

Year	Elk River (Station No. 08NK002)	Kootenay River (Station No. 08NG065)
	m^3/s	m^3/s
2014	55	188
2015	41	144
2016	42	170

APPENDIX C
SEDIMENT QUALITY DATA

Table C.1: Sediment, Benthic, and Plankton Sampling Locations in Koocanusa Reservoir, August 2014

Station		UTM (NAD 83, Zone 11U)		Station Depth	Average Ponar Fullness	Sample Texture	Macrophytes in Sample	Algae in Sample	Comments
		Easting	Northing		% Fullness				
Upstream of Elk River	T2-2	629650	5450400	30.1	25%	100% sand and finer	sparse organic matter	No	mostly clay, hard packed on bottom
	T2-3	629417	5450394	19.2	33%	100% sand and finer	minimal organic matter	No	hard packed clay with minimal material on top
	T2-4	629235	5450445	19.5	33%	100% sand and finer	minimal organic matter	No	-
	T2-5	629059	5450389	20.0	75%	100% sand and finer, more organics than T2-2-4	some dead organic matter	No	-
	T2-6	628883	5450370	18.3	100%	100% sand and finer	dead organic matter common	No	-
Downstream of Elk River	T4-2	630076	5441806	27.8	100%	100% sand and finer	No	No	-
	T4-3	629798	5441984	27.4	100%	100% sand and finer	No	No	-
	T4-4	629703	5441675	26.4	100%	100% sand and finer	No	No	-
	T4-5	629487	5441751	25.8	100%	100% sand and finer	No	No	-
	T4-6	629403	5441477	30.5	100%	100% sand and finer	No	No	-

Table C.2: Sediment Sampling Locations in Koocanusa Reservoir, August 2015

Station		UTM (NAD 83, Zone 11U)		Station Depth (m)	Average Ponar Fullness (%)	Sample Texture	Macrophytes in Sample	Algae in Sample
		Easting	Northing					
Upstream of Elk River	TN-1	627377	5453471	13.5	75%	90% sand and finer, 10% organics	No	No
	TN-2	627270	5453644	12.4	75%	90% sand and finer, 10% organics	No	No
	TN-3	627341	5453711	13.2	100%	90% sand and finer, 10% organics	No	No
	TN-4	627329	5453862	12.9	75%	90% sand and finer, 10% organics	No	No
	TN-5	627211	5453978	13.4	100%	90% sand and finer, 10% organics	No	No
Downstream of Elk River	T4-2	630082	5441810	24.2	100%	90% sand and finer, 10% organics	No	No
	T4-3	629825	5442010	22.8	100%	90% sand and finer, 10% organics	No	No
	T4-4	629715	5441648	22.7	100%	90% sand and finer, 10% organics	No	No
	T4-5	629500	5441738	22.2	100%	90% sand and finer, 10% organics	No	No
	T4-6	629511	5441551	23.2	100%	90% sand and finer, 10% organics	No	No

Table C.3: Benthic Sampling Locations in Koocanusa Reservoir, August 2016

Station		UTM (NAD 83, Zone 11U)		Station Depth (m)	Average Ponar Fullness (%)	Sample Texture	Macrophytes in Sample	Algae in Sample
		Easting	Northing					
Upstream of Elk River	TN-1	627369	5453492	15	50%	100% sand and finer, minimal organics	No	Sparse
	TN-2	627256	5453672	14	75% - 100%	100% sand and finer, minimal organics	No	Sparse
	TN-3	627367	5453710	15	75% - 100%	100% sand and finer, 10% organics	No	Sparse
	TN-4	627333	5453882	15	75% - 100%	100% sand and finer, minimal organics	No	Sparse
	TN-5	627200	5454005	15	75% - 100%	100% sand and finer, minimal organics	No	Sparse
Downstream of Elk River	T4-2	630115	5441812	24	100%	100% sand and finer	No	No
	T4-3	629831	5442006	25	100%	100% sand and finer	No	No
	T4-4	629695	5441699	25	100%	100% sand and finer	No	No
	T4-5	629494	5441783	24	100%	100% sand and finer, minimal organics	No	Sparse
	T4-6	629430	5441547	25	100%	100% sand and finer	No	No

* indicates a significant difference between the two areas at an α of 0.1.

[a] The measure of central tendency reported is based on the applied data-transformation, as follows: mean for no transformation; geometric mean for log_{10}-transformation; and, median for rank-transformation.

[b] The bolded values are above the BC Sediment Quality Guidelines lowest effect level.

P-value < 0.1.

Phytoplankton

Figure D.1: Chlorophyll-a Concentration (µg/L) from *In Situ* Water Quality Profiles in Koocanusa Reservoir in a) April and b) August 2015

Notes: Sand Creek and T2/TN areas are located downstream of the Elk River confluence while Elk River, T4, and Gold Creek areas are located downstream.
The upstream location (T2) was relocated further upstream (TN) from the mouth of the Elk River after the April sampling in 2015.

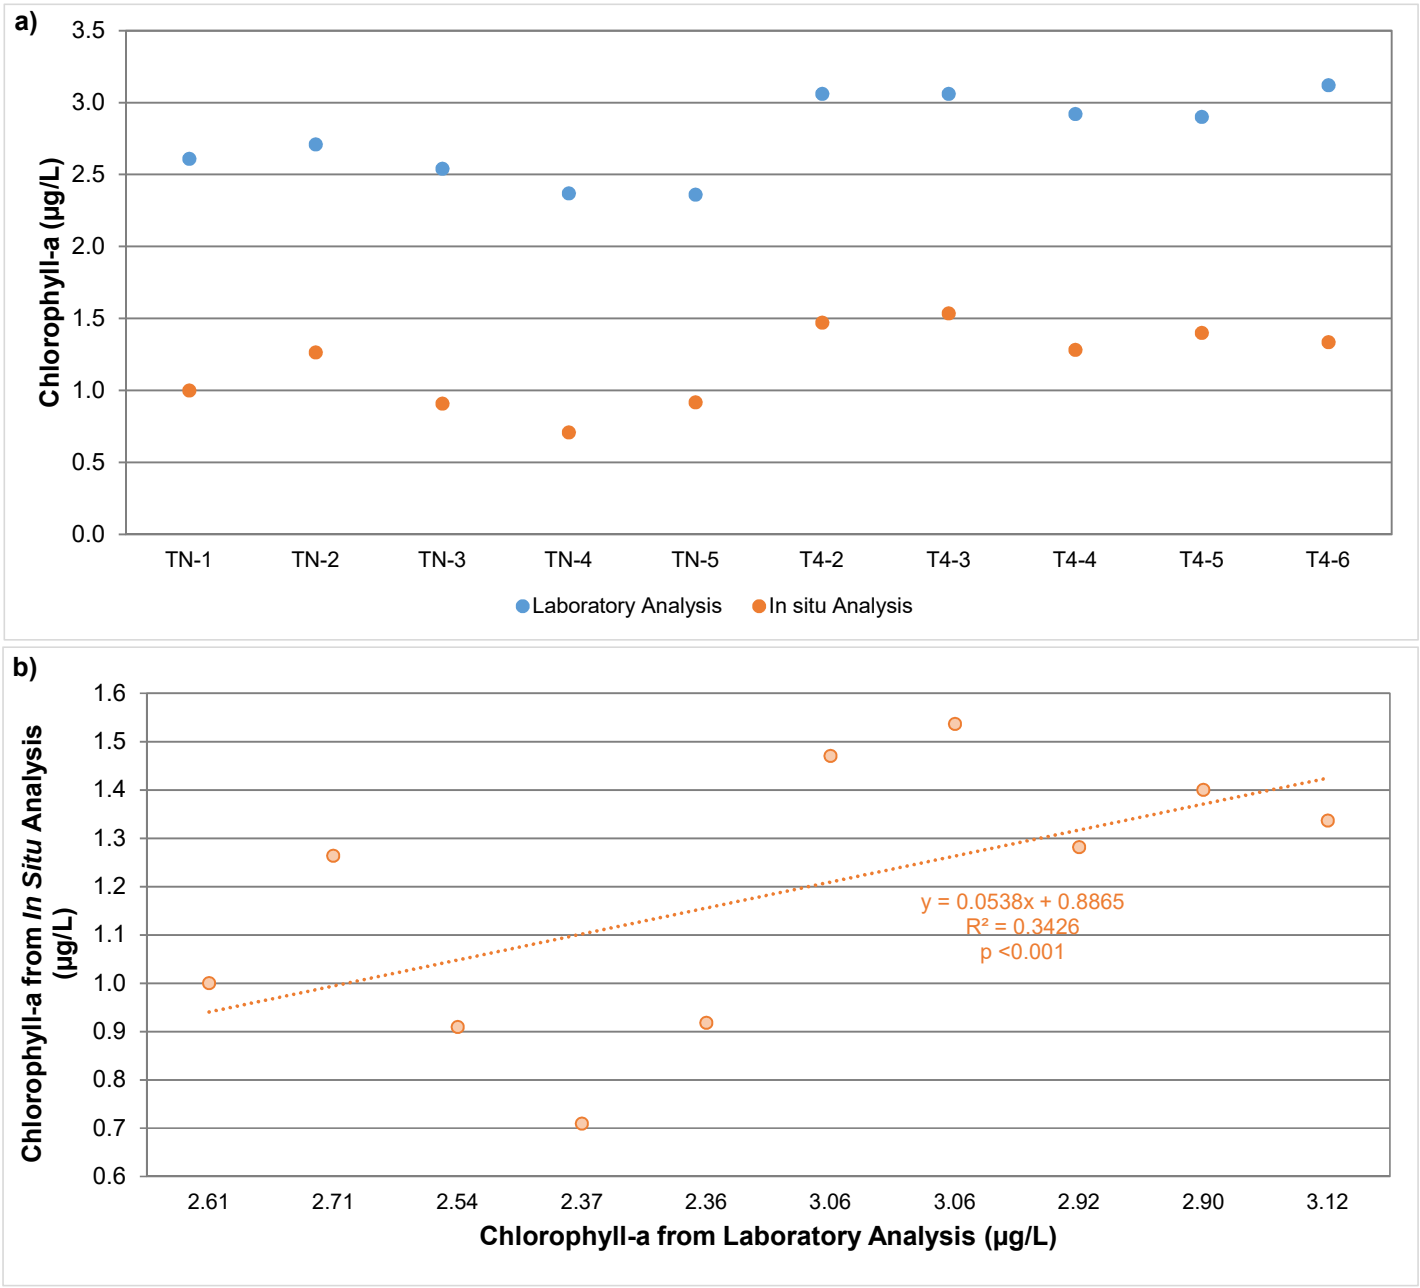

Figure D.2: a) Chlorophyll-a Concentrations in the Top 10 m of the Water Column Upstream (TN) and Downstream (T4) from the Elk River as Measured *In Situ* and in the Laboratory, August 2015
b) Regression Relationship Between the Chlorophyll-a Analyses

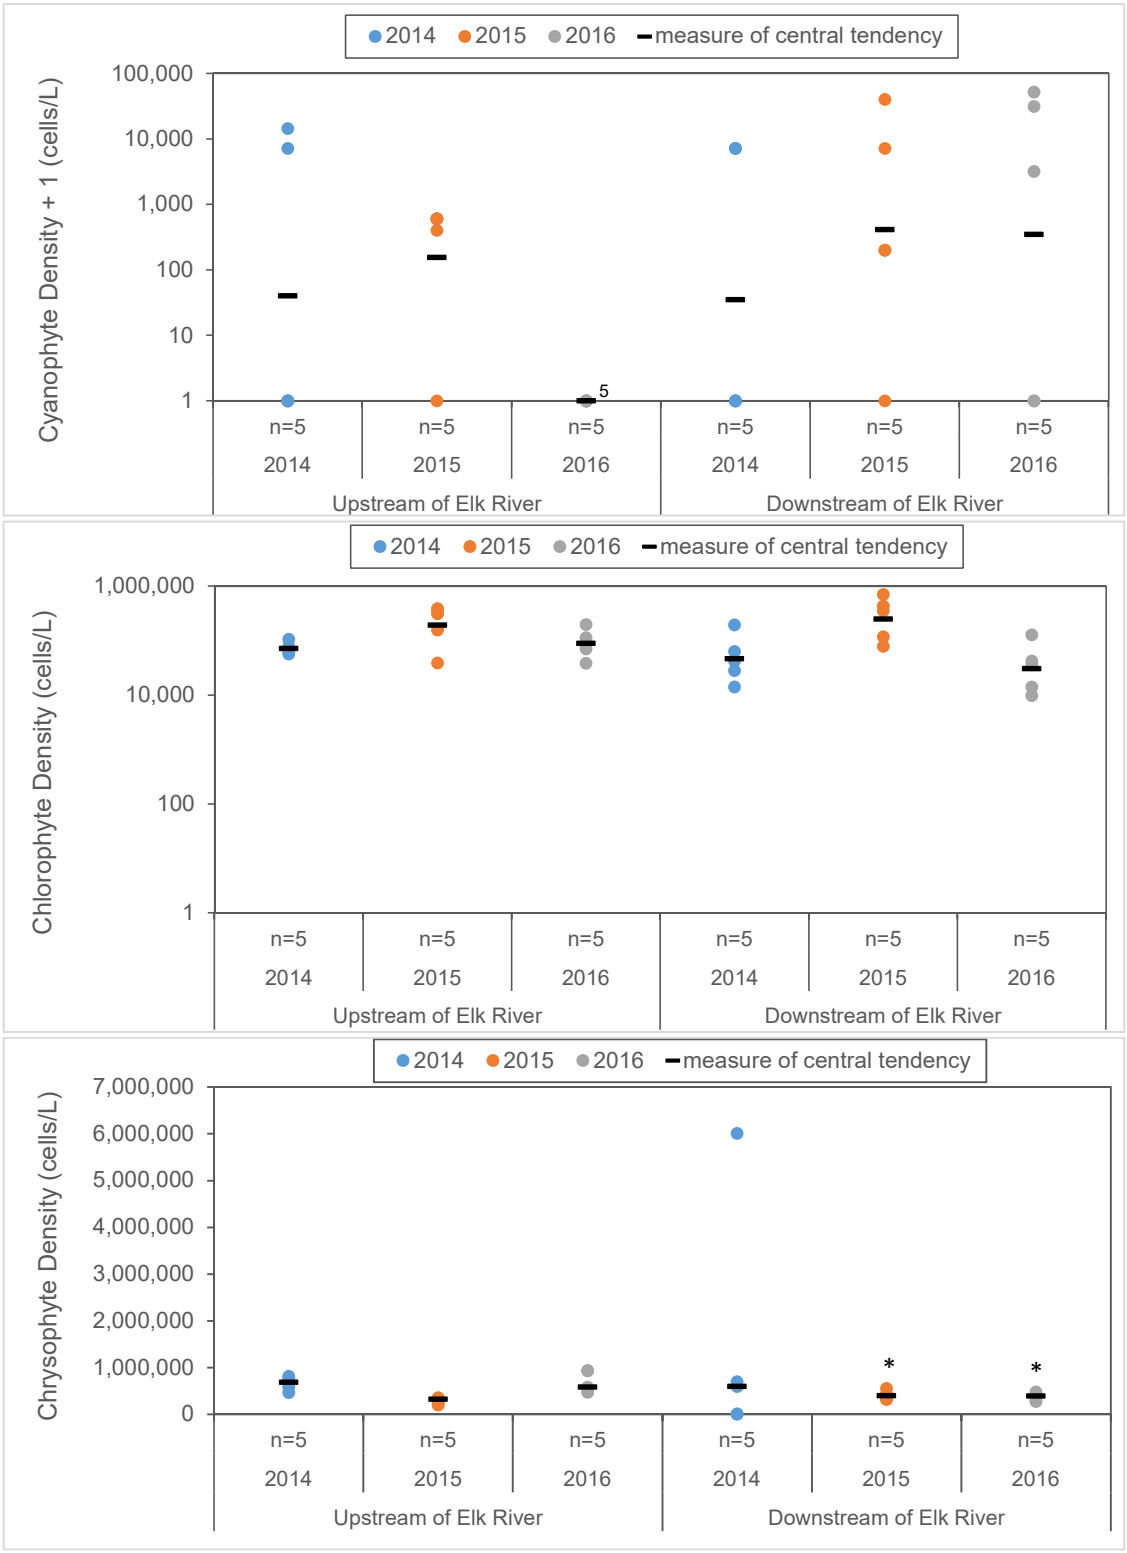

Figure D.3: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Density (cells/L) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

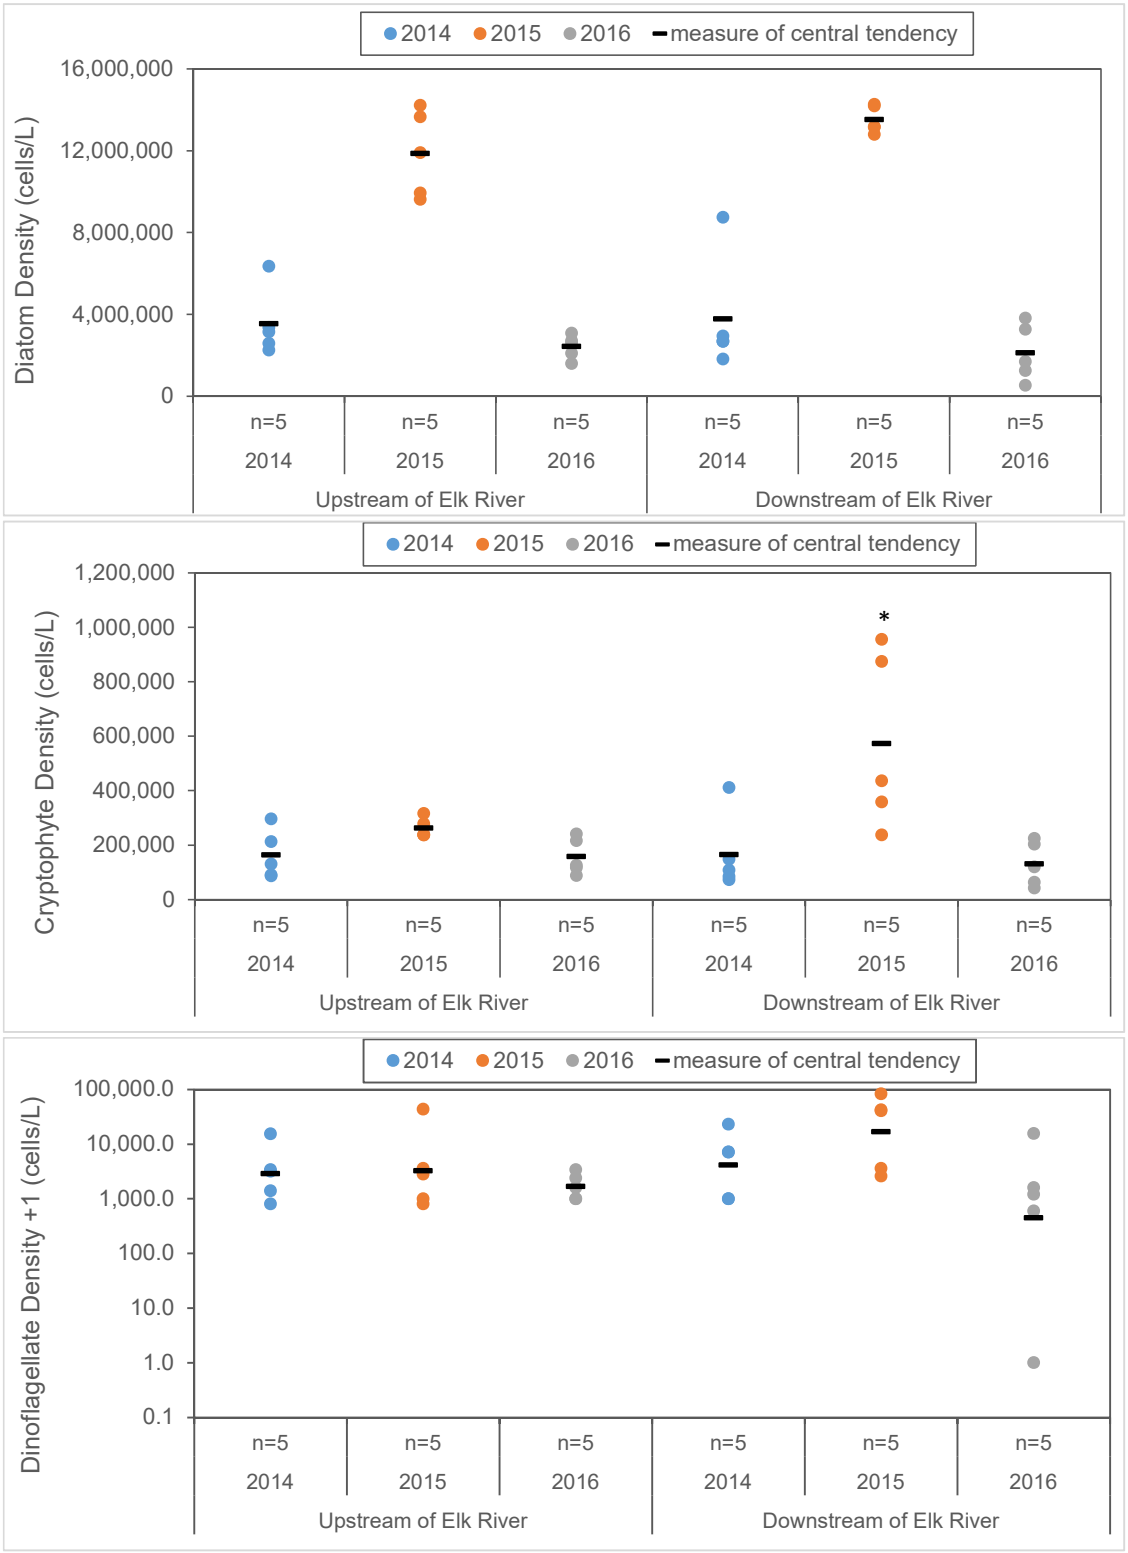

Figure D.3: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Density (cells/L) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

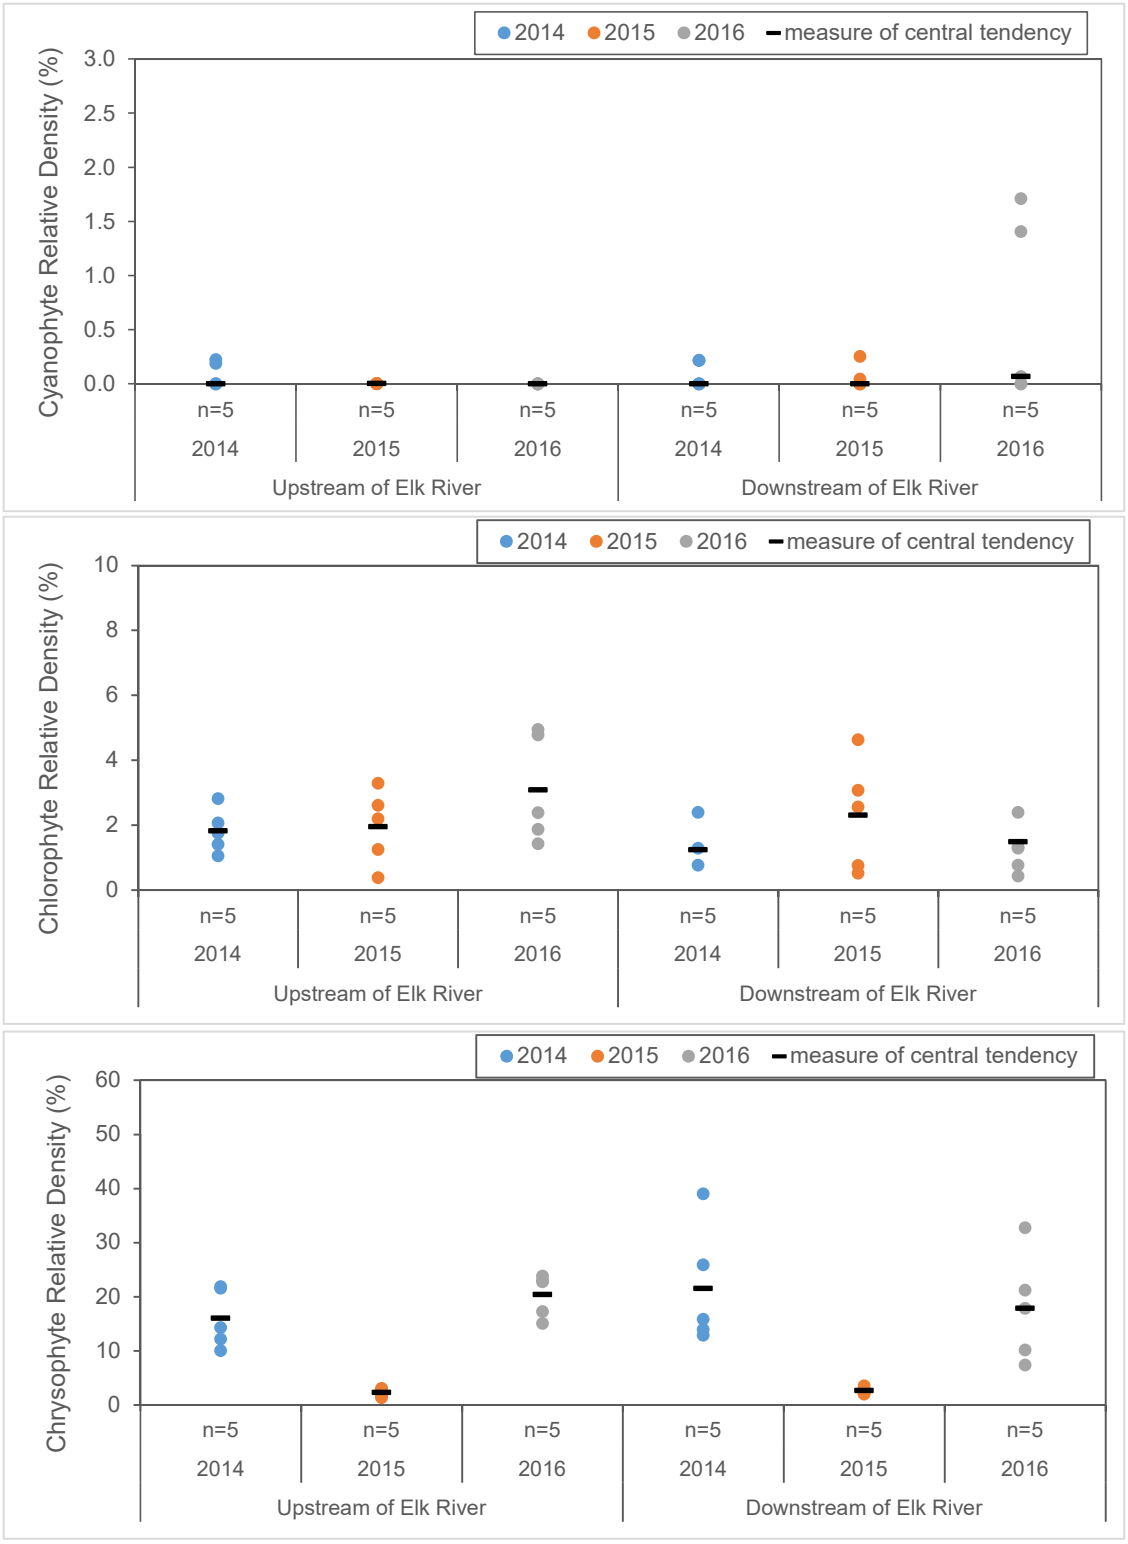

Figure D.4: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Relative Density (%) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

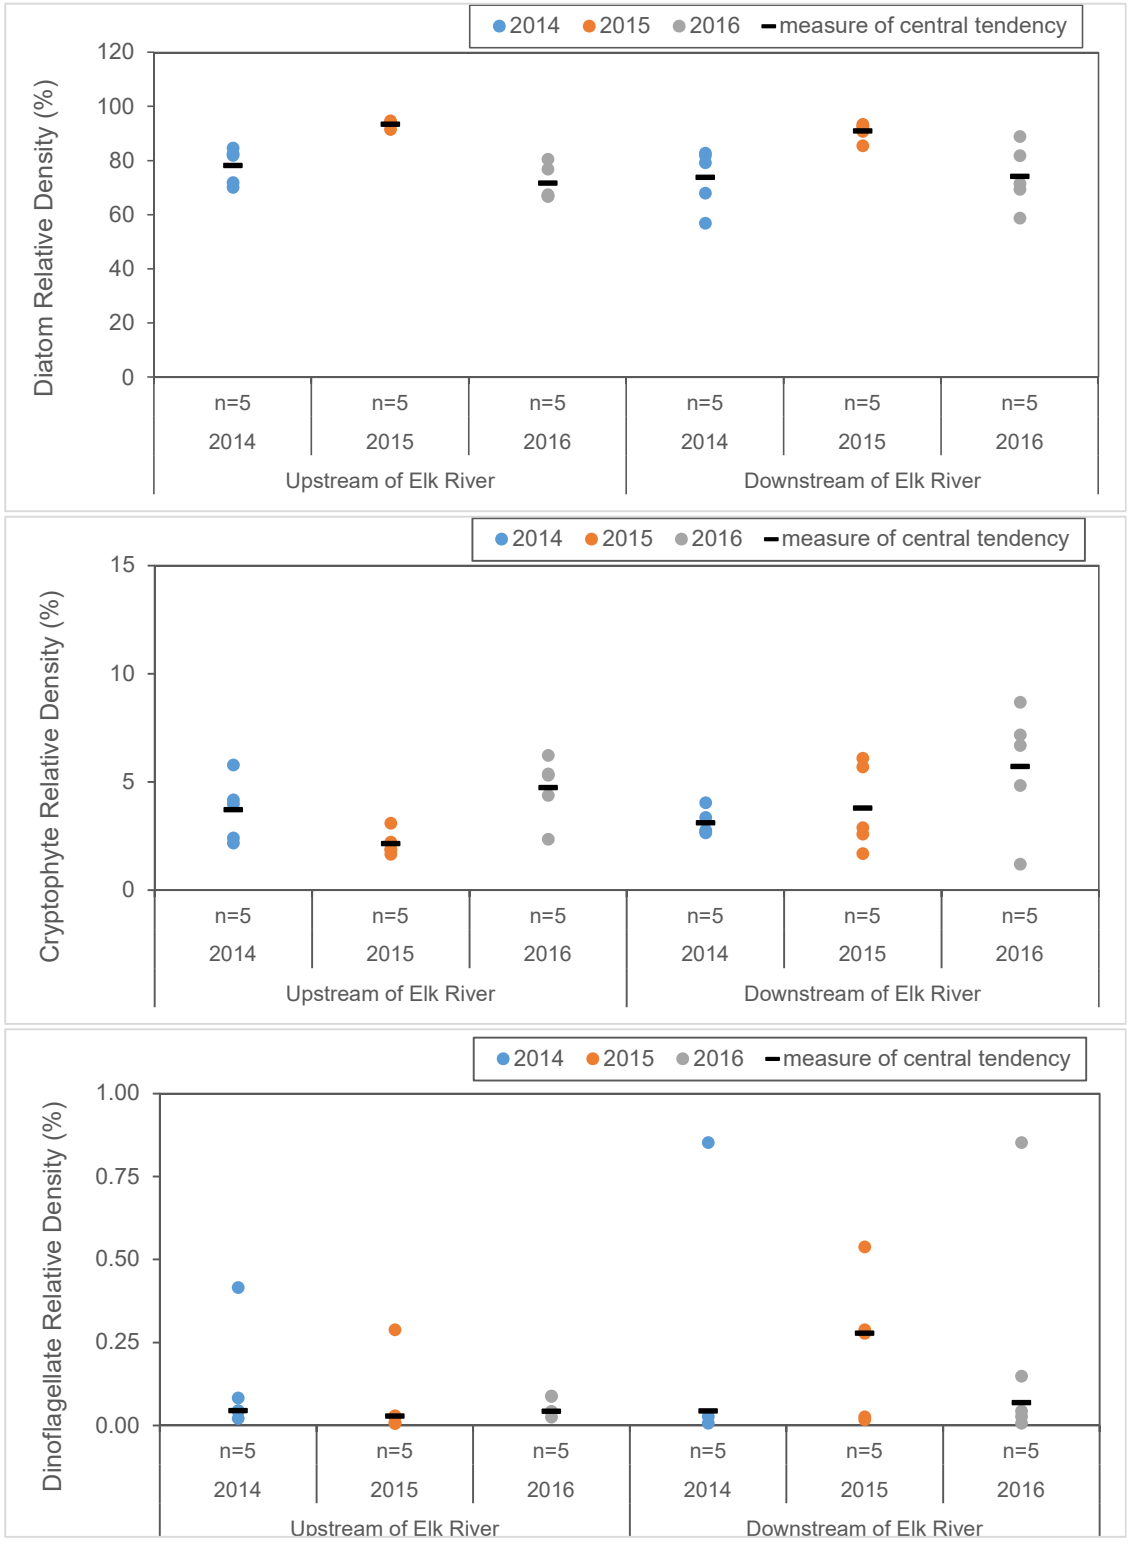

Figure D.4: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Relative Density (%) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

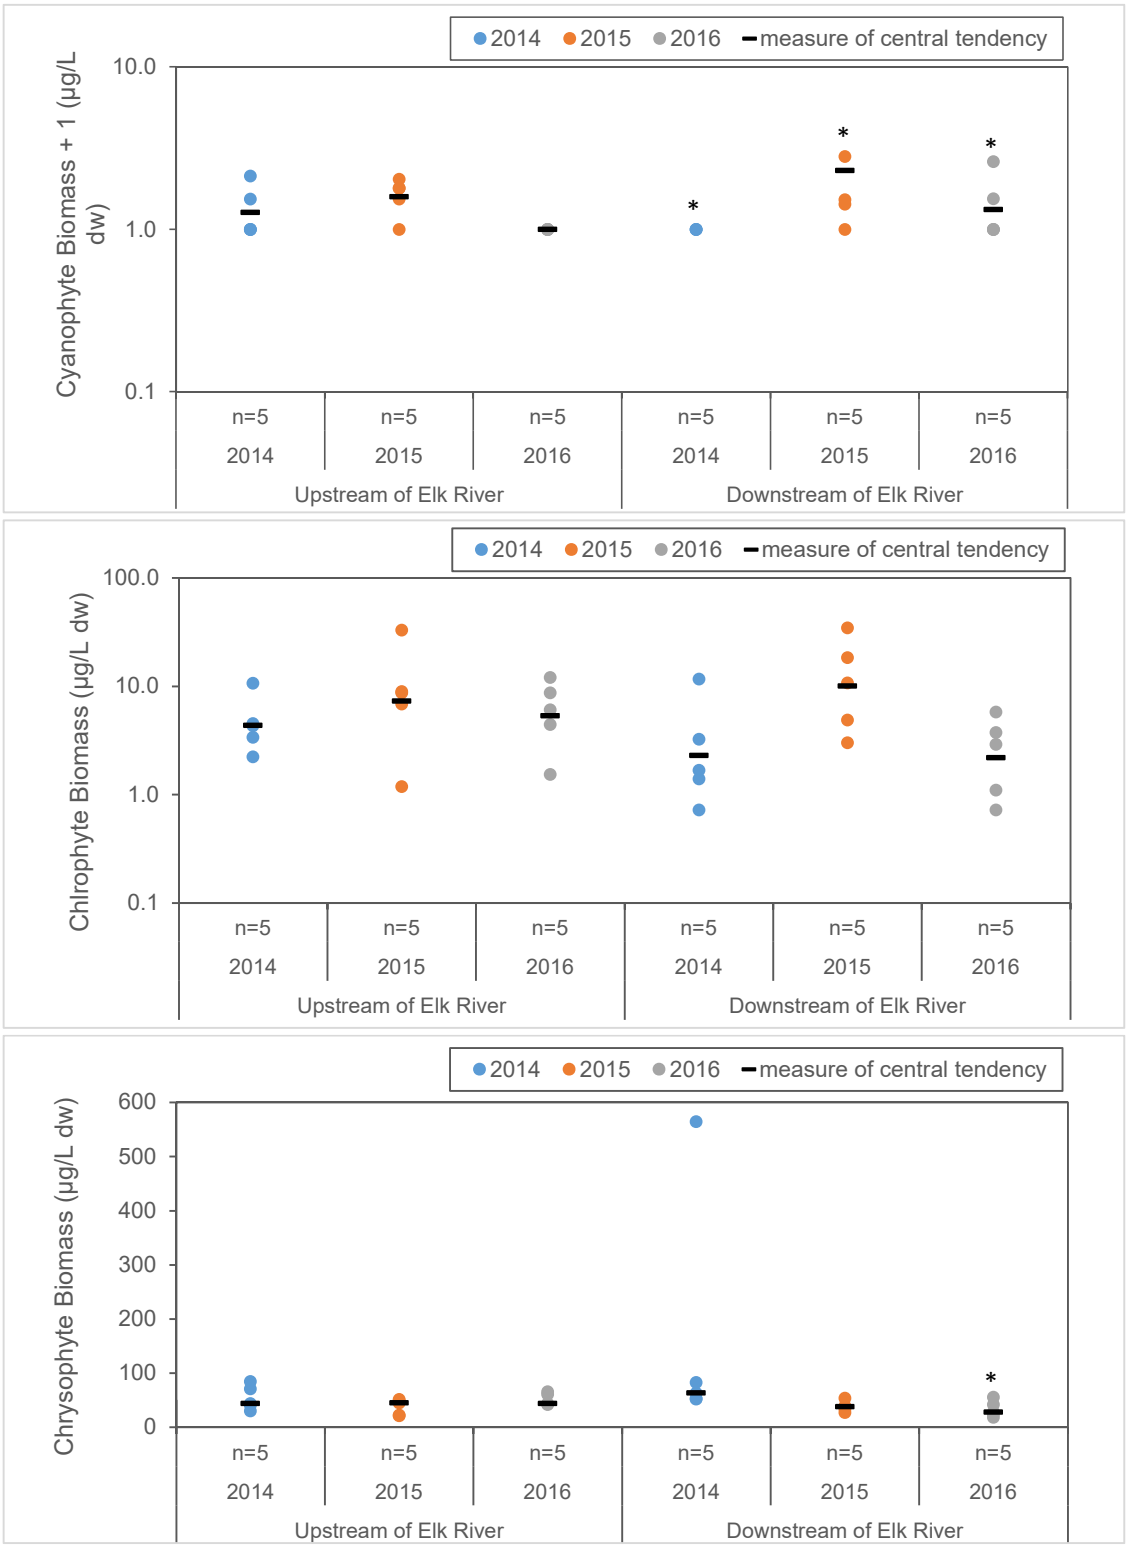

Figure D.5: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Biomass (µg/L) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

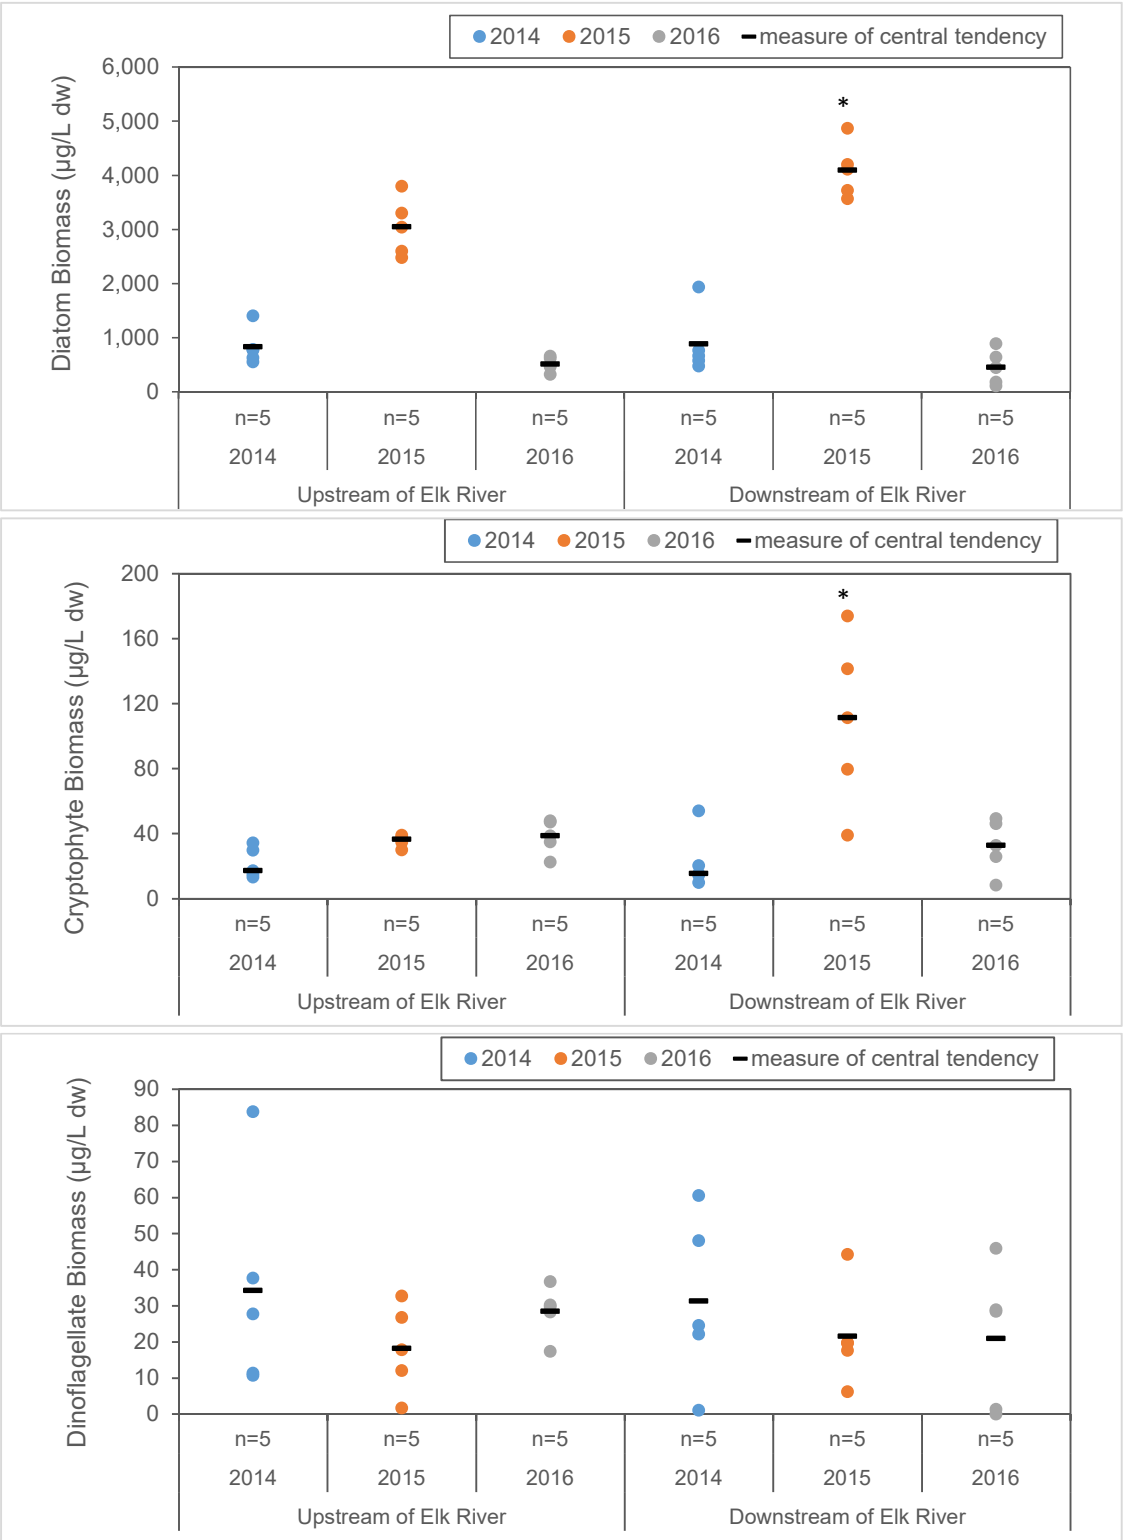

Figure D.5: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Biomass (µg/L) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

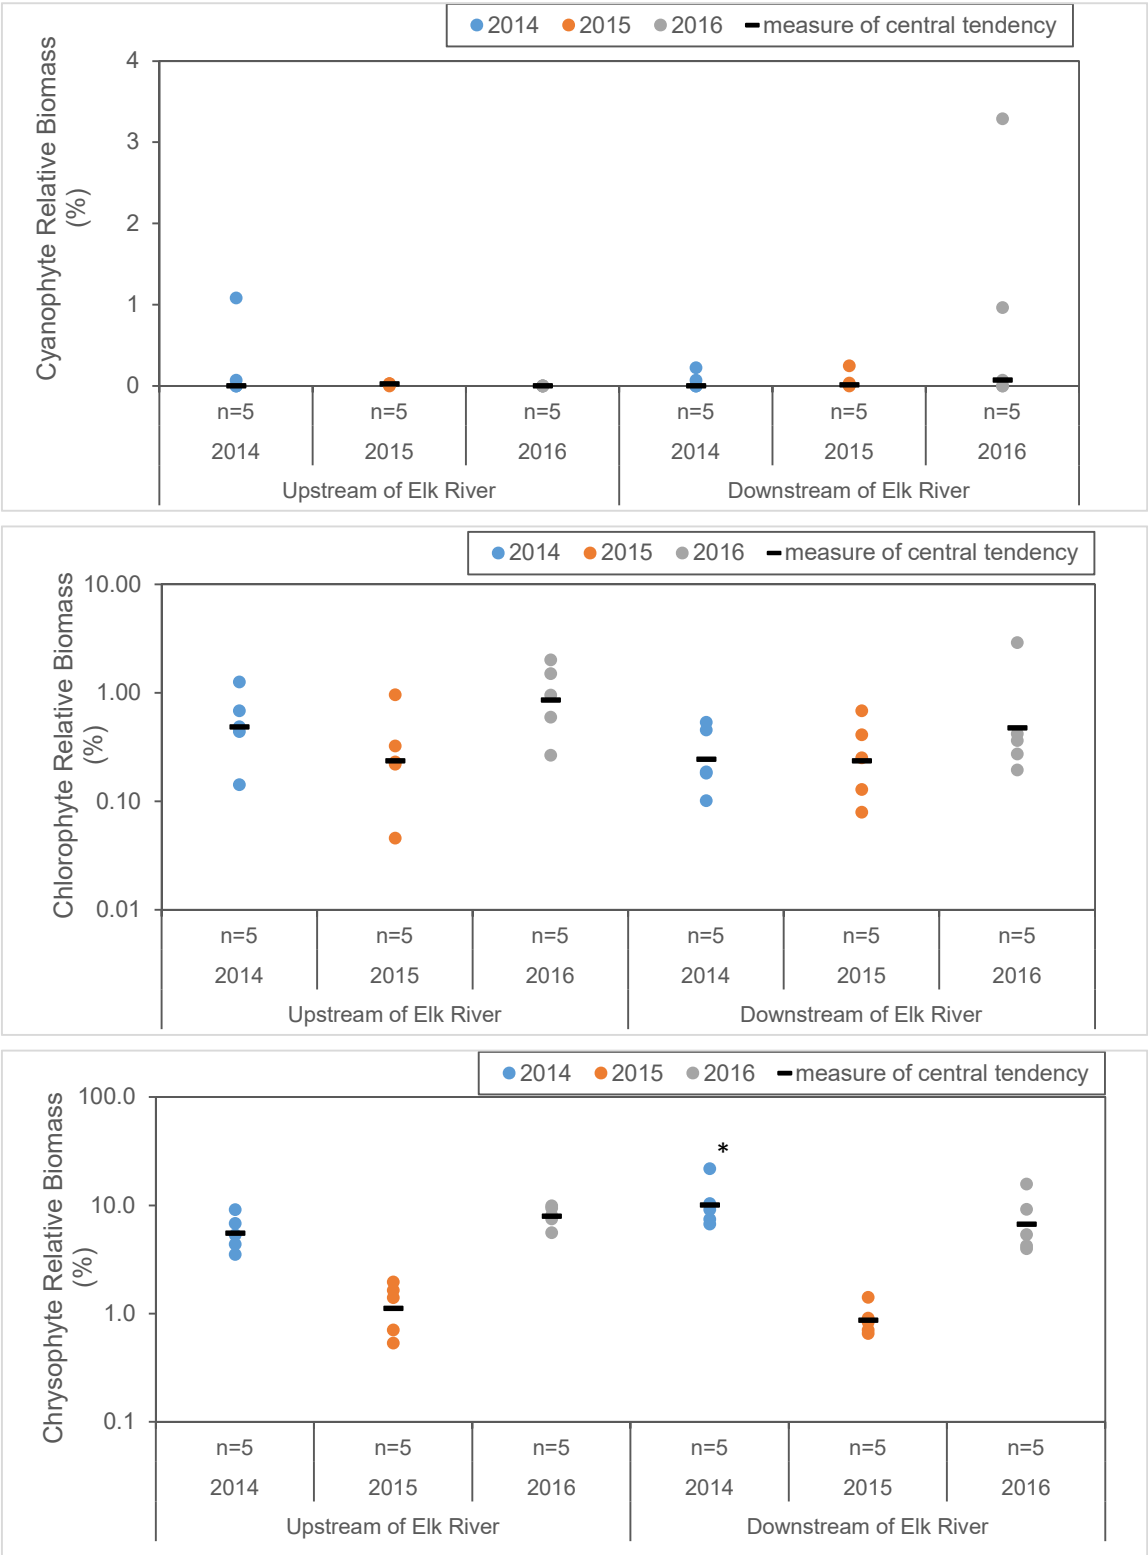

Figure D.6: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Relative Biomass (%) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

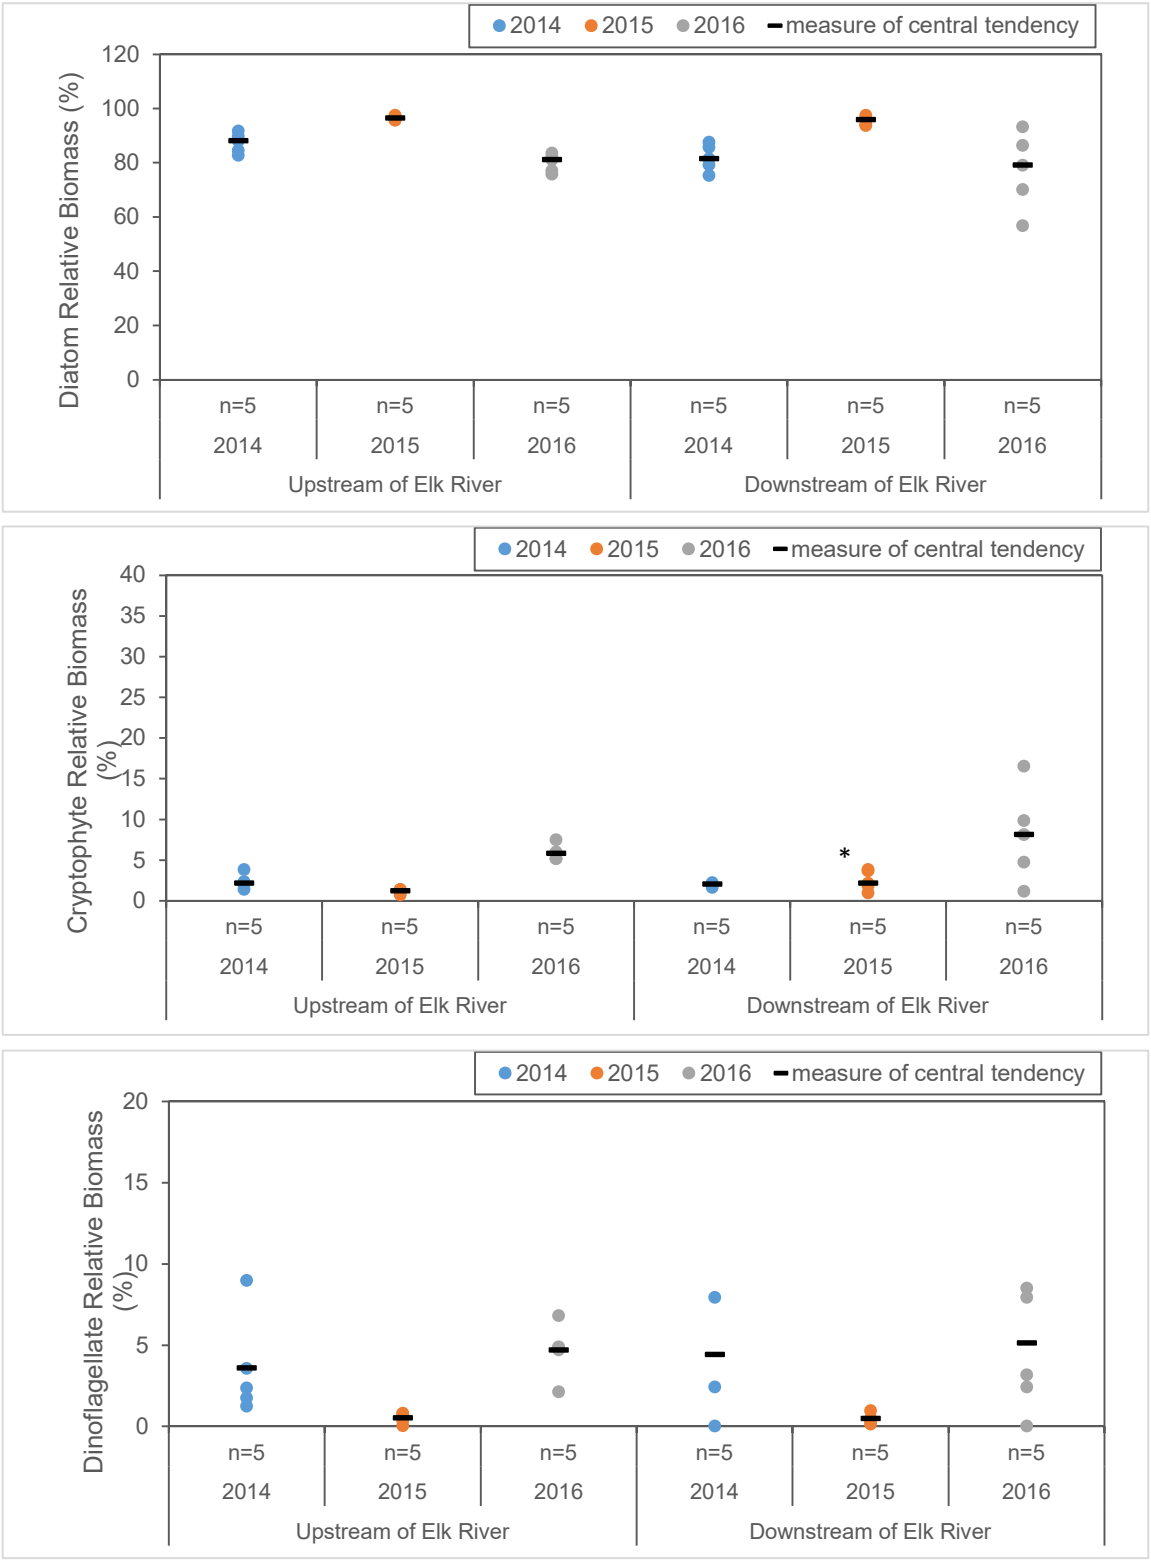

Figure D.6: Cyanophyte, Chlorophyte, Chrysophyte, Diatom, Cryptophyte, and Dinoflagellate Relative Biomass (%) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

Table D.1: Chlorophyll-a and Seston Biomass Concentrations in Water, August 2014 to 2016

Area	Sample ID	Chlorophyll-a (µg/L)			Seston Biomass (mg/L dw)		
		2014	2015	2016	2014	2015	2016

Final Stress			**13.81**		**7.31**	
% Variance explained			**53.8**	**32.1**	**92.5**	**-**
Monte Carlo p-value			**0.004**	**0.004**	**0.012**	**-**

[a] A one dimensional (axis) solution was obtained because a two dimensional solution did not reduce stress by at least 5 units, which indicates that an additional axis does little to improve the monotonic relationship between the original dimensional space and the reduced dimensional space (McCune and Grace 2002).

Table D.28: Pearson Correlations Non-Metric Multidimensional Scaling (NMDS) Axis Scores, using Three Years (2014, 2015, 2016) of Phytoplankton Community Data from the Upstream and Downstream Areas of the Elk River with Relative Benthic Invertebrate Taxon Density

- Pearson correlation coefficients greater than an absolute value of 0.5.
- Pearson correlation with p-value less than 0.05.

[a] A one dimensional (axis) solution was obtained because a two dimensional solution did not reduce stress by at least 5 units, which indicates that an additional axis does little to improve the monotonic relationship between the original dimensional space and the reduced dimensional space (McCune and Grace 2002).

Zooplankton

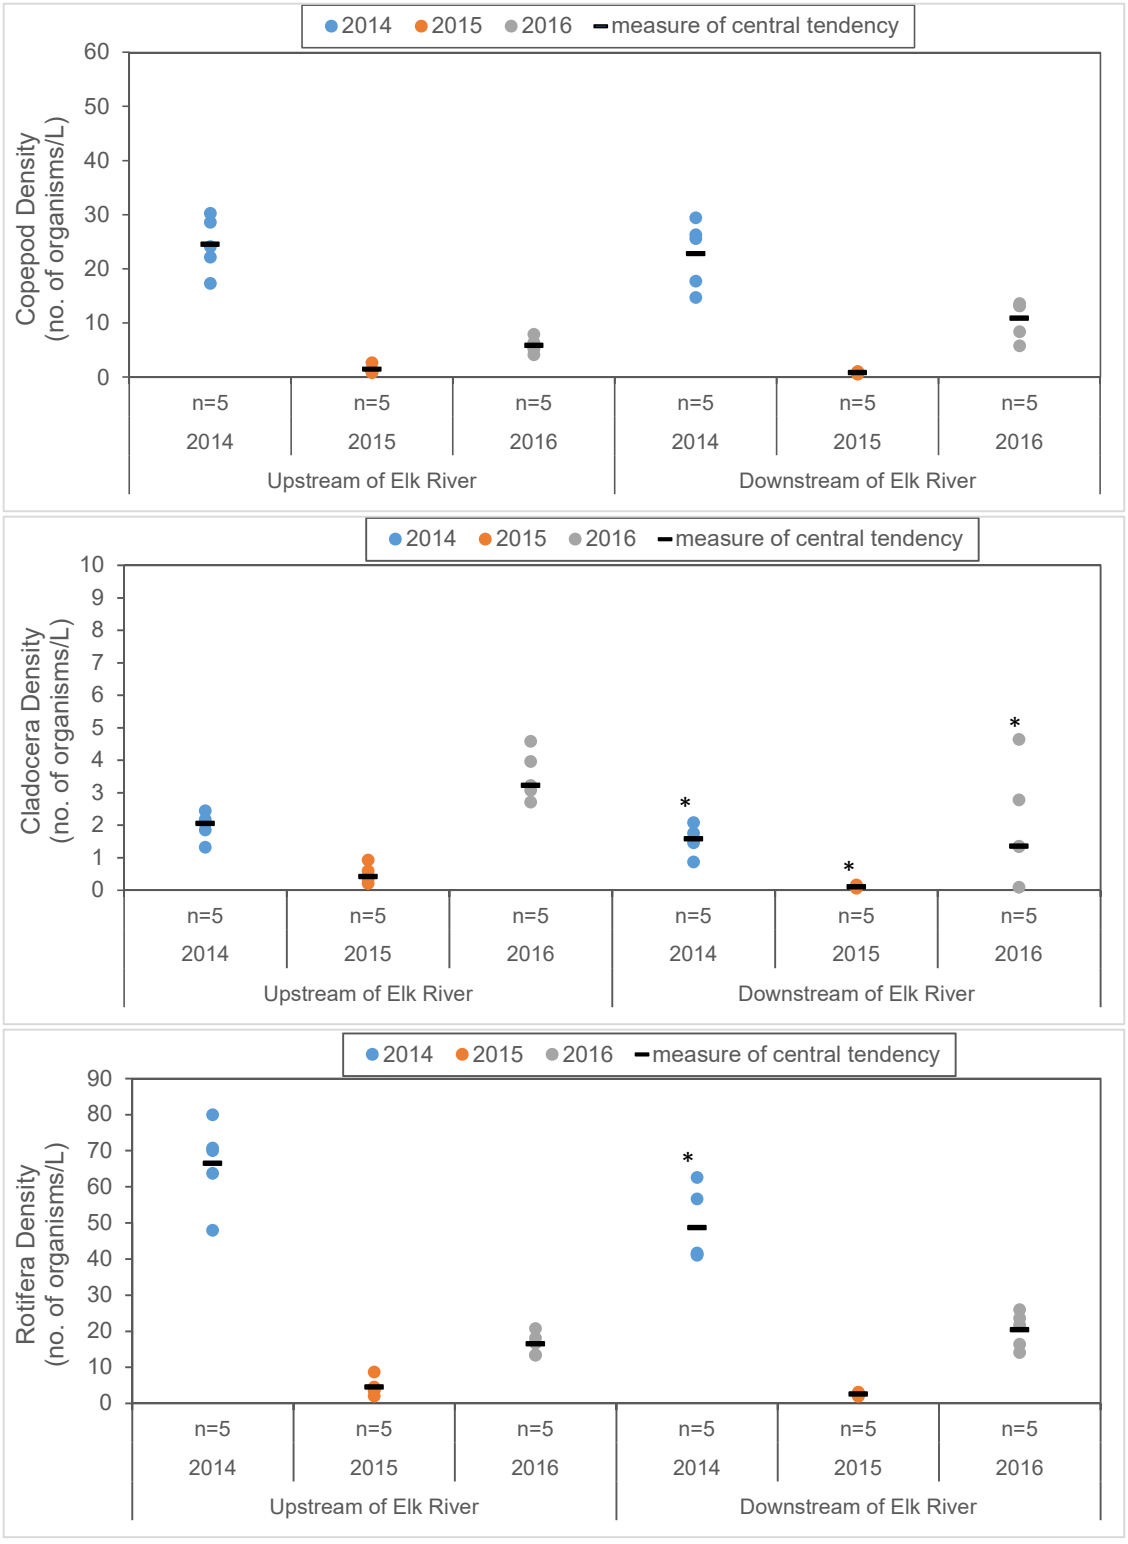

Figure D.7: Copepod Density, Cladocera Density, and Rotifera Density in Koocanusa Reservoir, August 2014, 2015, and 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

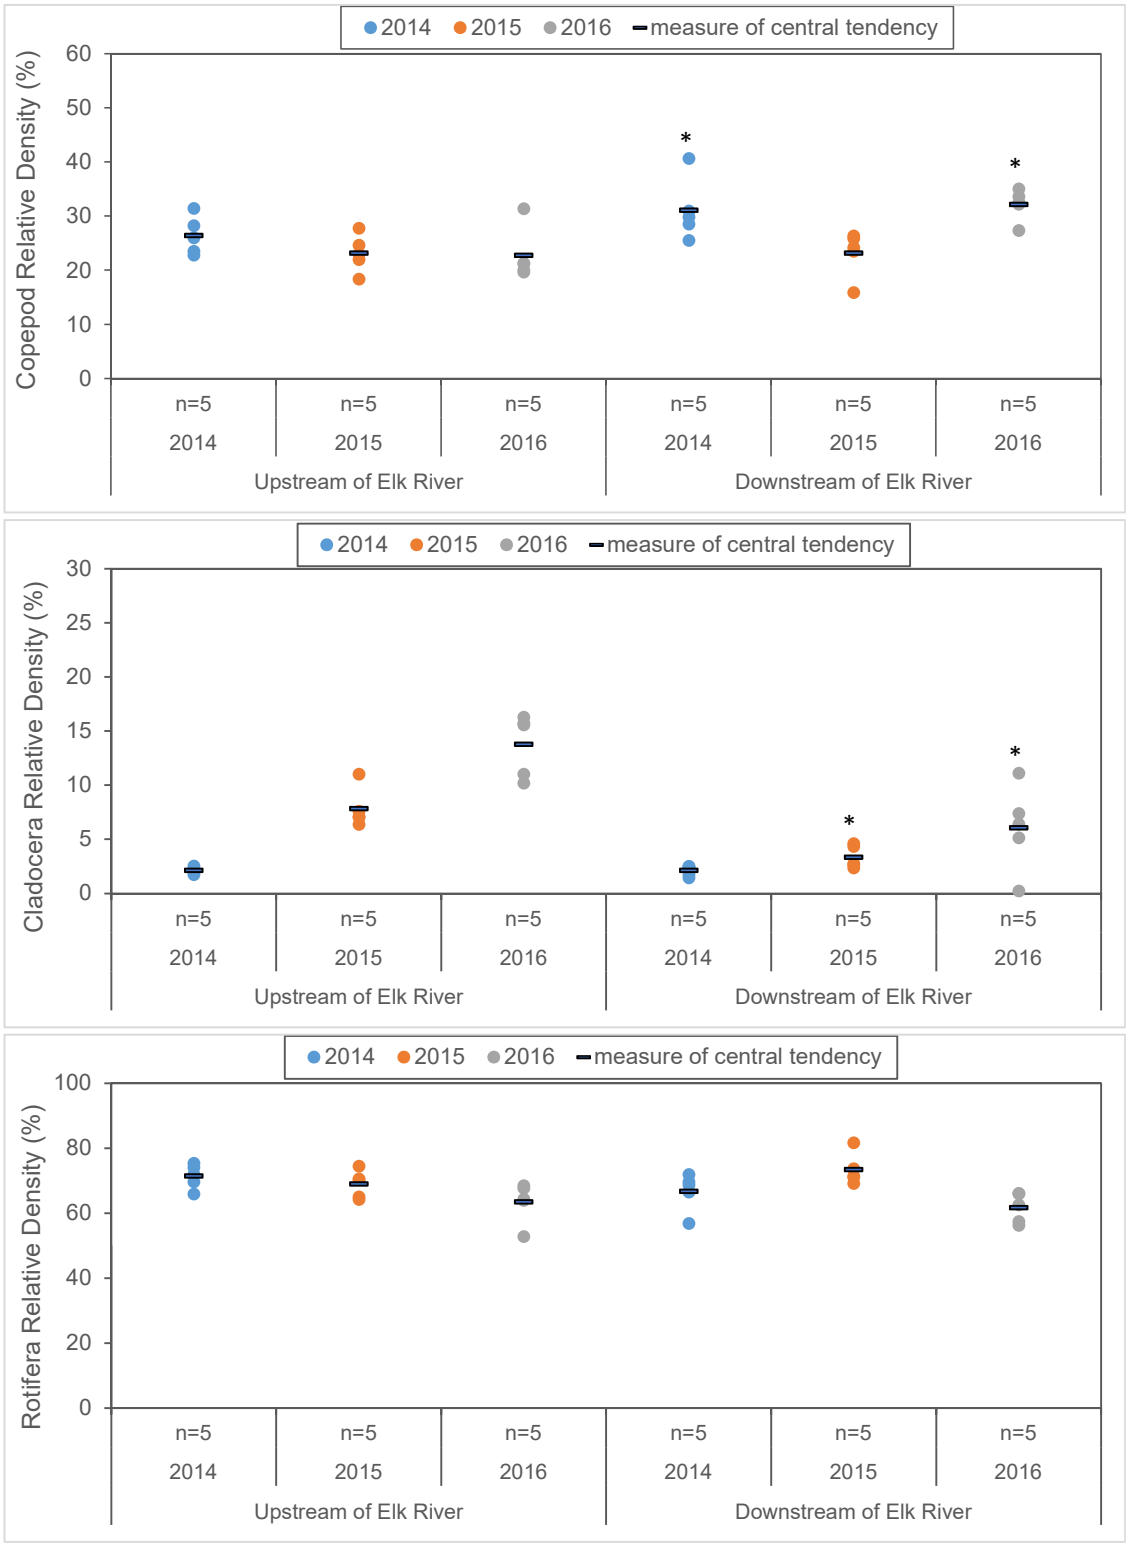

Figure D.8: Copepod Relative Density, Cladocera Relative Density, and Rotifera Relative Density in Koocanusa Reservoir, August 2014, 2015, and 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

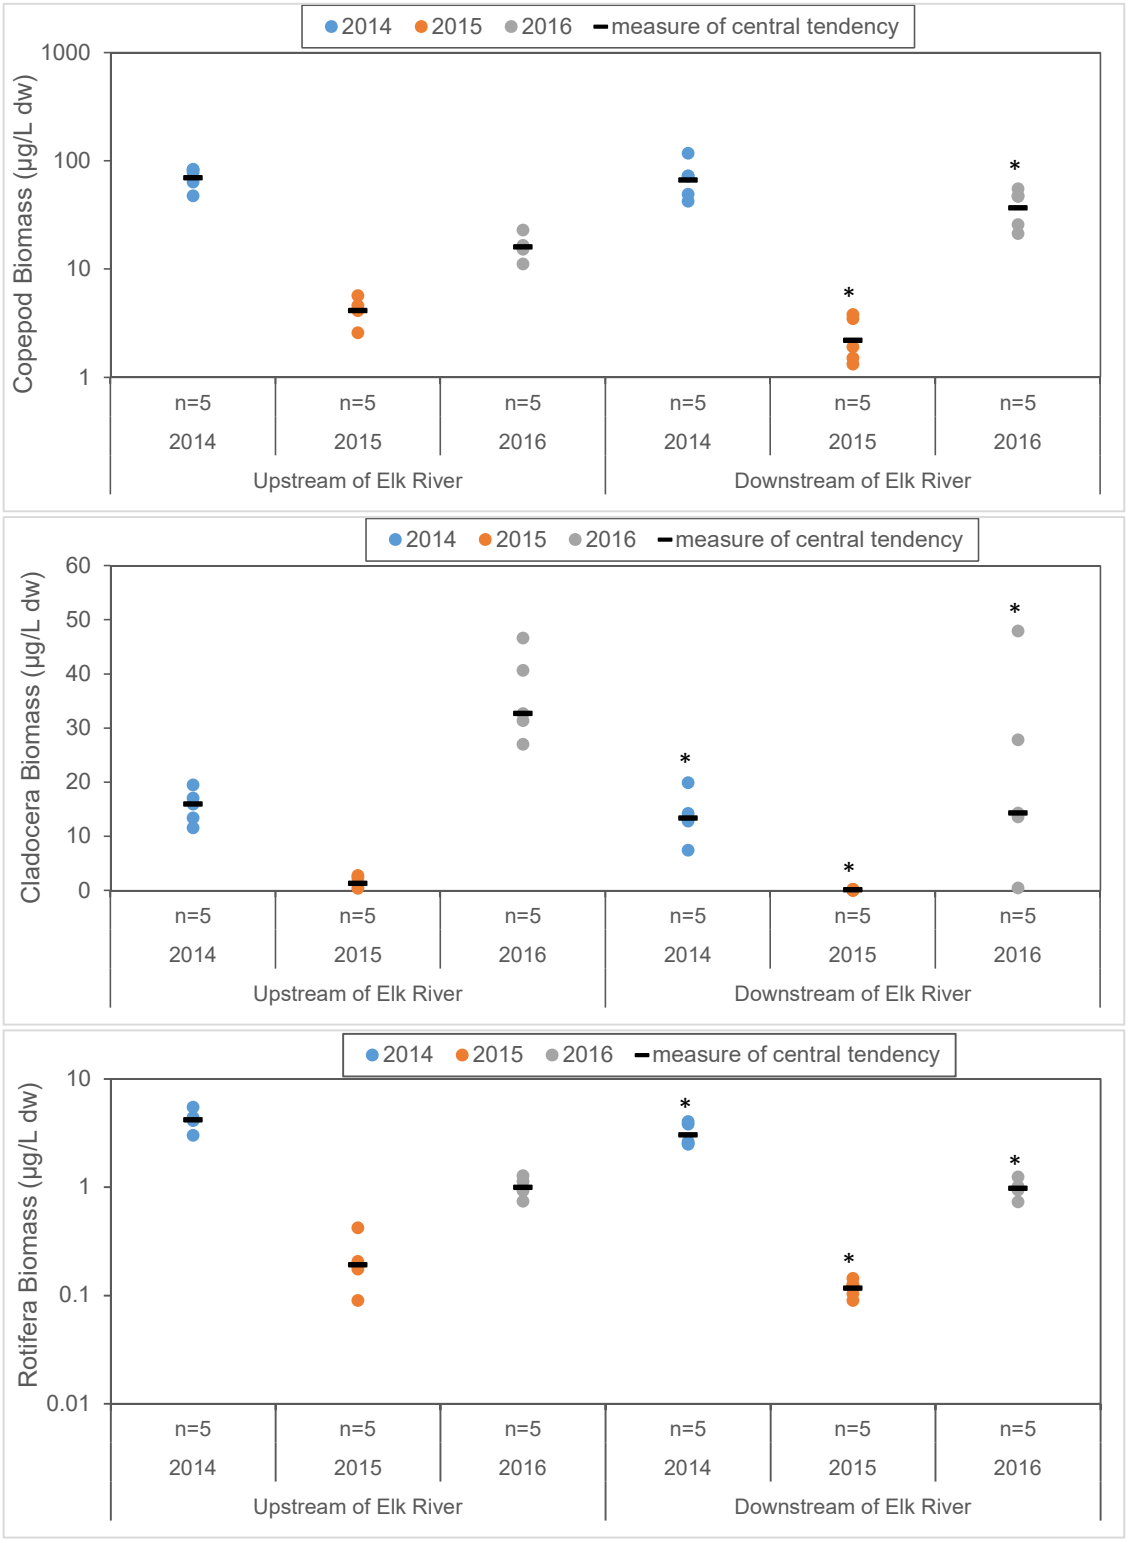

Figure D.9: Copepod Biomass, Cladocera Biomass, and Rotifera Biomass in Koocanusa Reservoir, August 2014, 2015, and 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

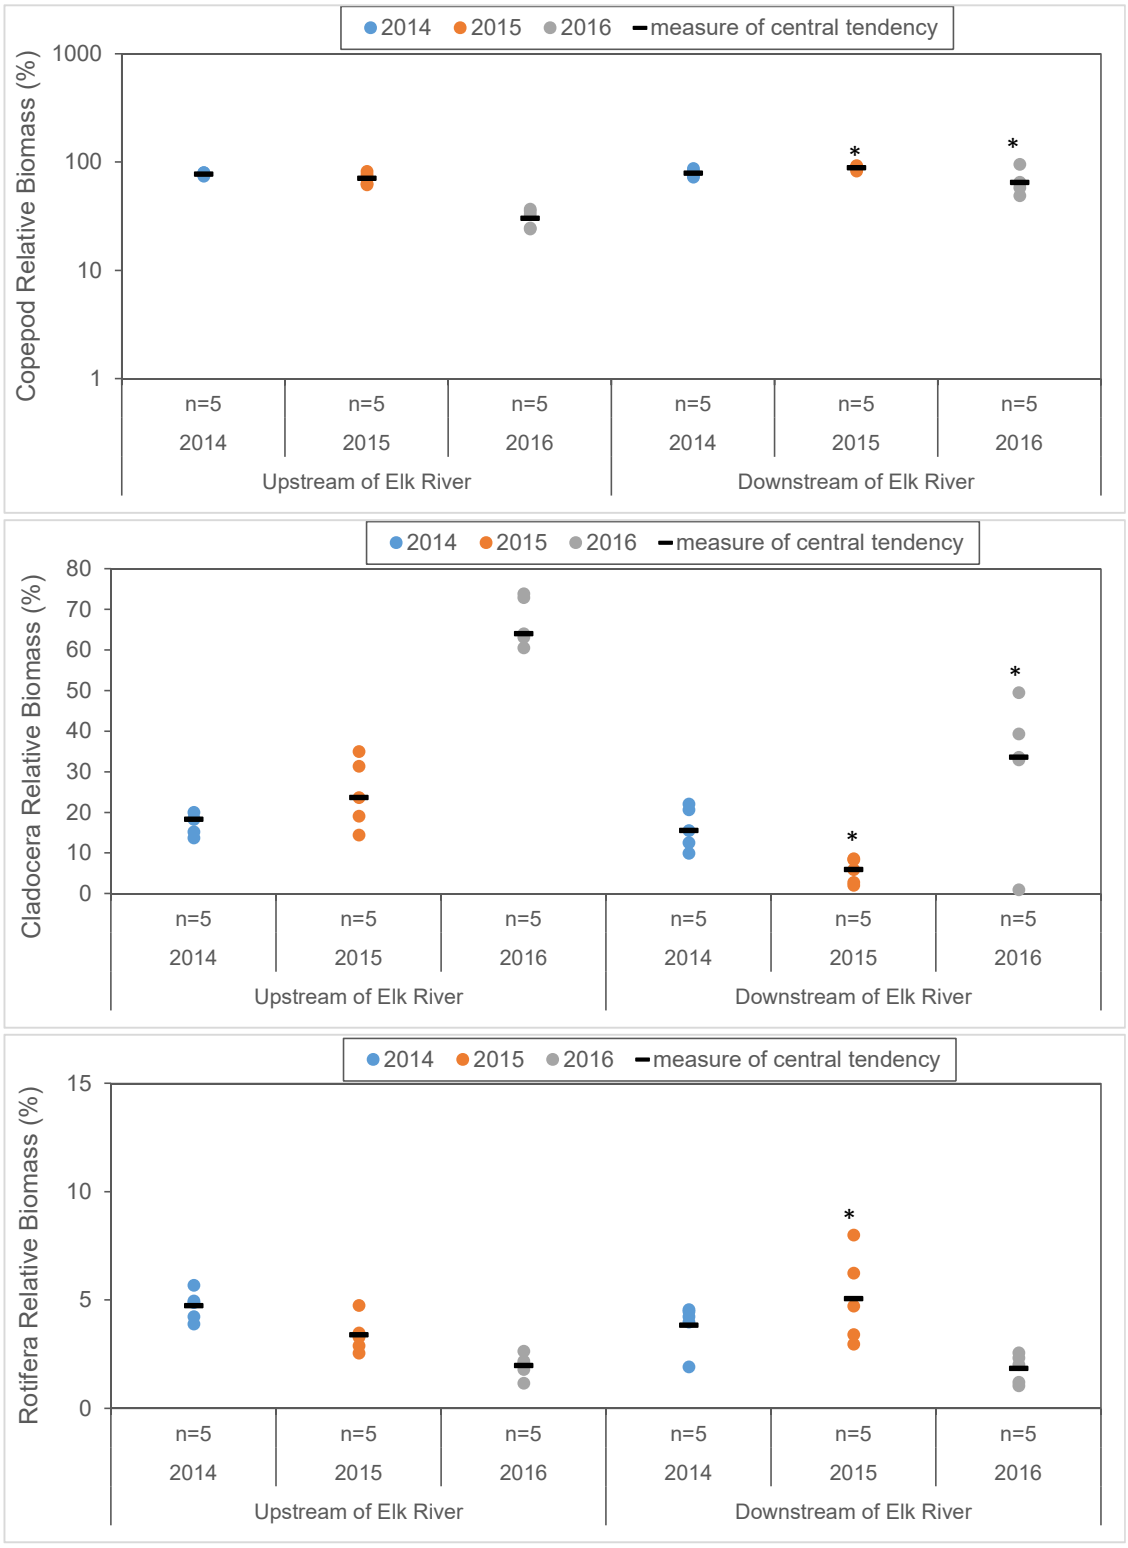

Figure D.10: Copepod Relative Biomass, Cladocera Relative Biomass, and Rotifera Relative Biomass in Koocanusa Reservoir, August 2014, 2015, and 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016.
' * ' indicates the downstream area was significantly different from the upstream area in the same year.

Pearson correlation coefficients greater than an absolute value of 0.5.

Pearson correlation with p-value less than 0.05.

[a] A one dimensional (axis) solution was obtained because a two dimensional solution did not reduce stress by at least 5 units, which indicates that an additional axis does little to improve the monotonic relationship between the original dimensional space and the reduced dimensional space (McCune and Grace 2002).

APPENDIX E
BENTHIC INVERTEBRATE DATA

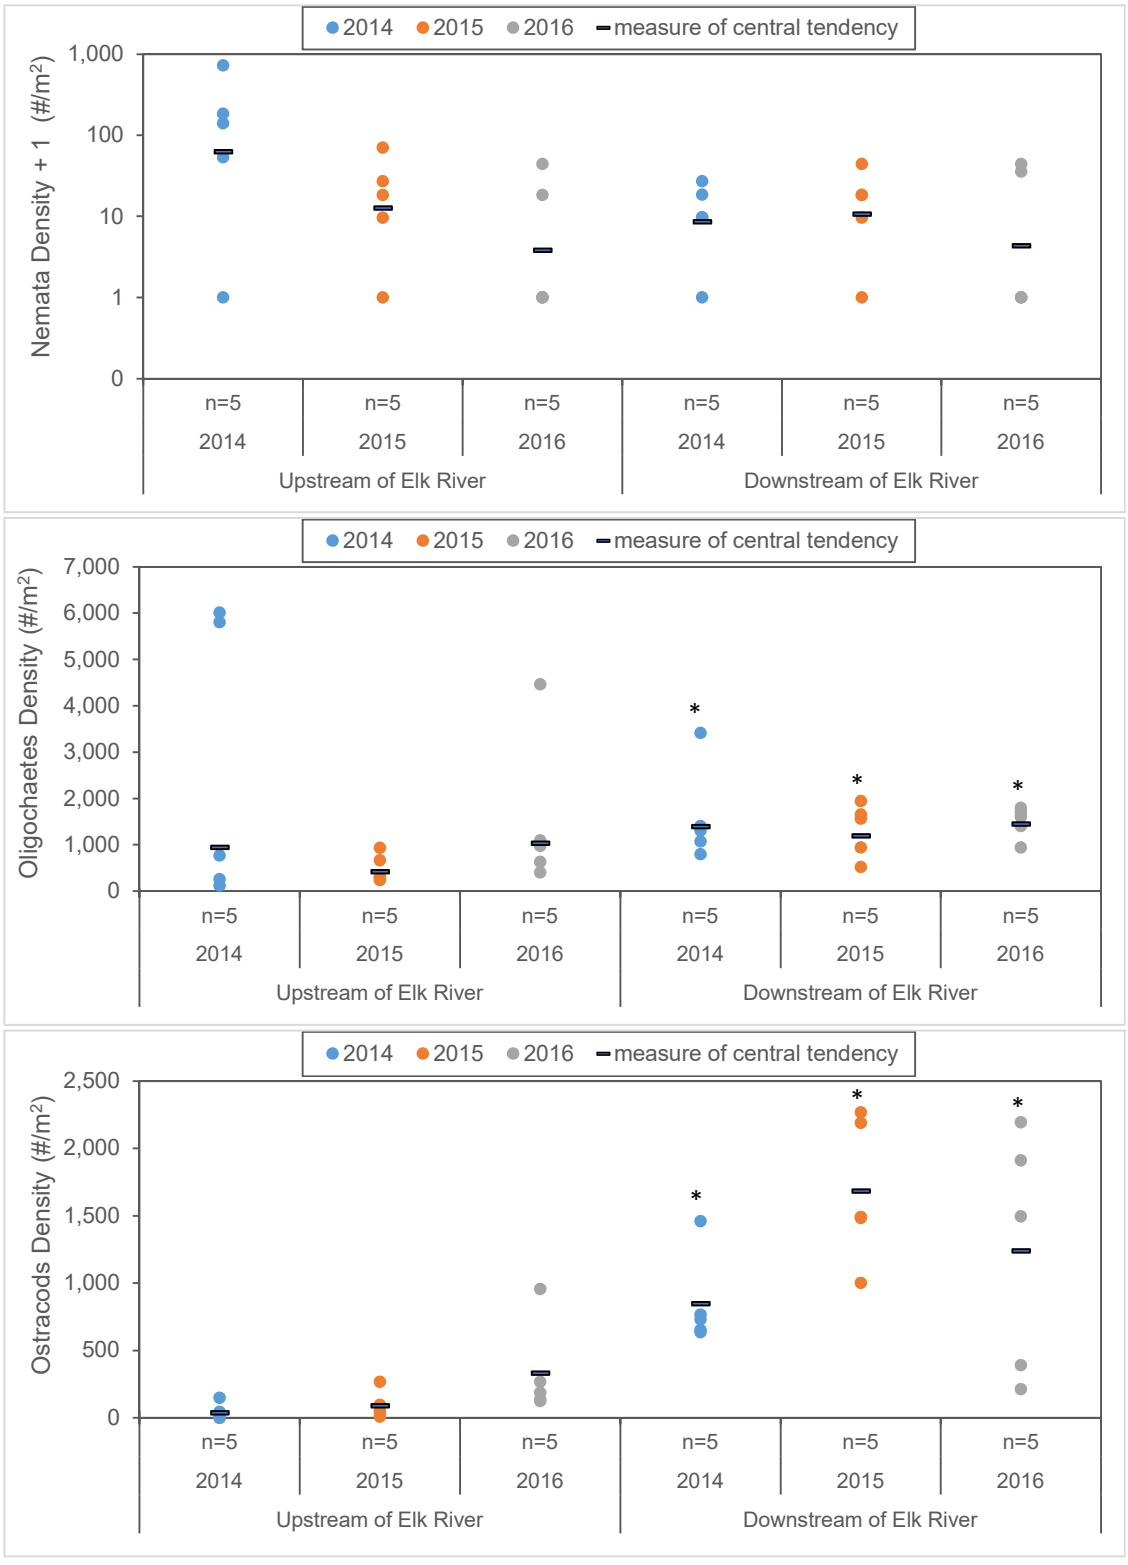

Figure E.1: Nemata, Oligochaetes, Ostracods, Chironomids, and Bivalve Molluscs Density (No. of Organisms/m^2) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016

' * ' indicates the downstream area was significantly different from the upstream area in the same year.

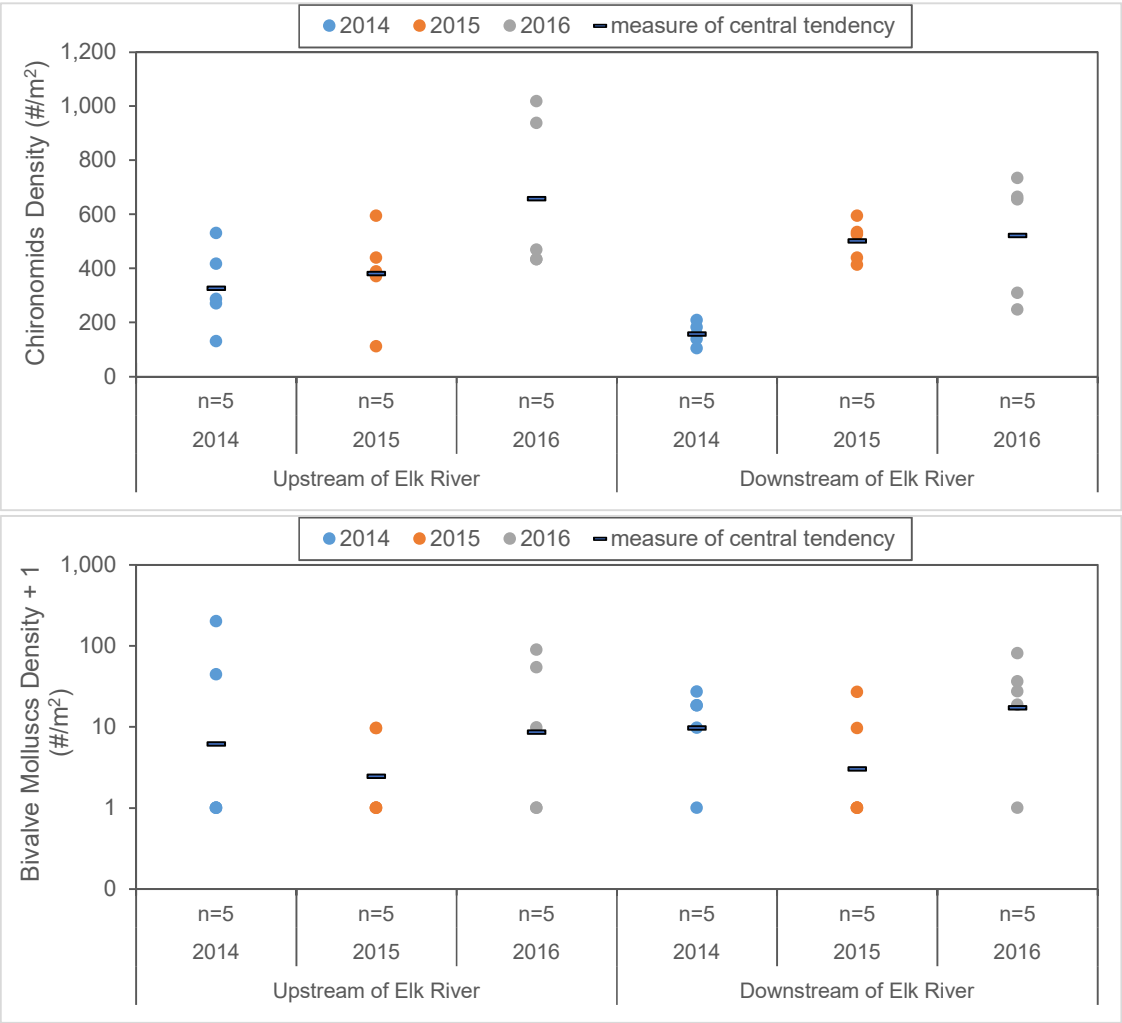

Figure E.1: Nemata, Oligochaetes, Ostracods, Chironomids, and Bivalve Molluscs Density (No. of Organisms/m^2) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016

' * ' indicates the downstream area was significantly different from the upstream area in the same year.

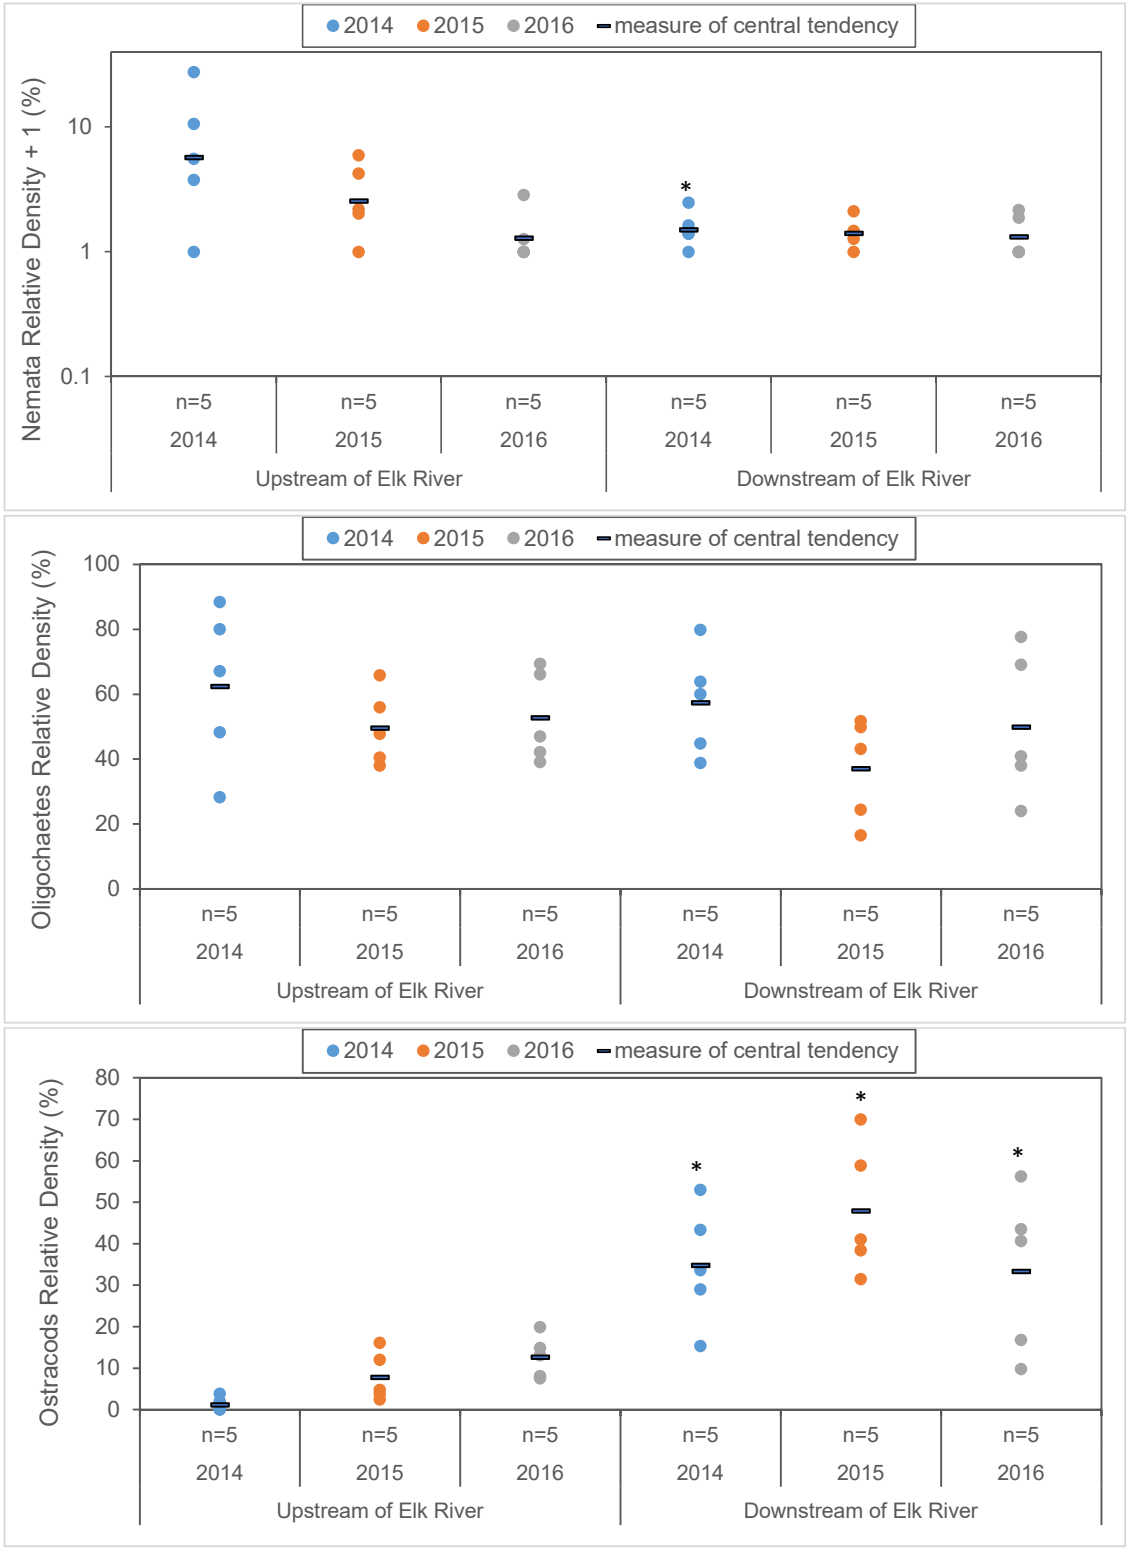

Figure E.2: Nemata, Oligochaetes, Ostracods, Chironomids, and Bivalve Molluscs Relative Density (%) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016

' * ' indicates the downstream area was significantly different from the upstream area in the same year.

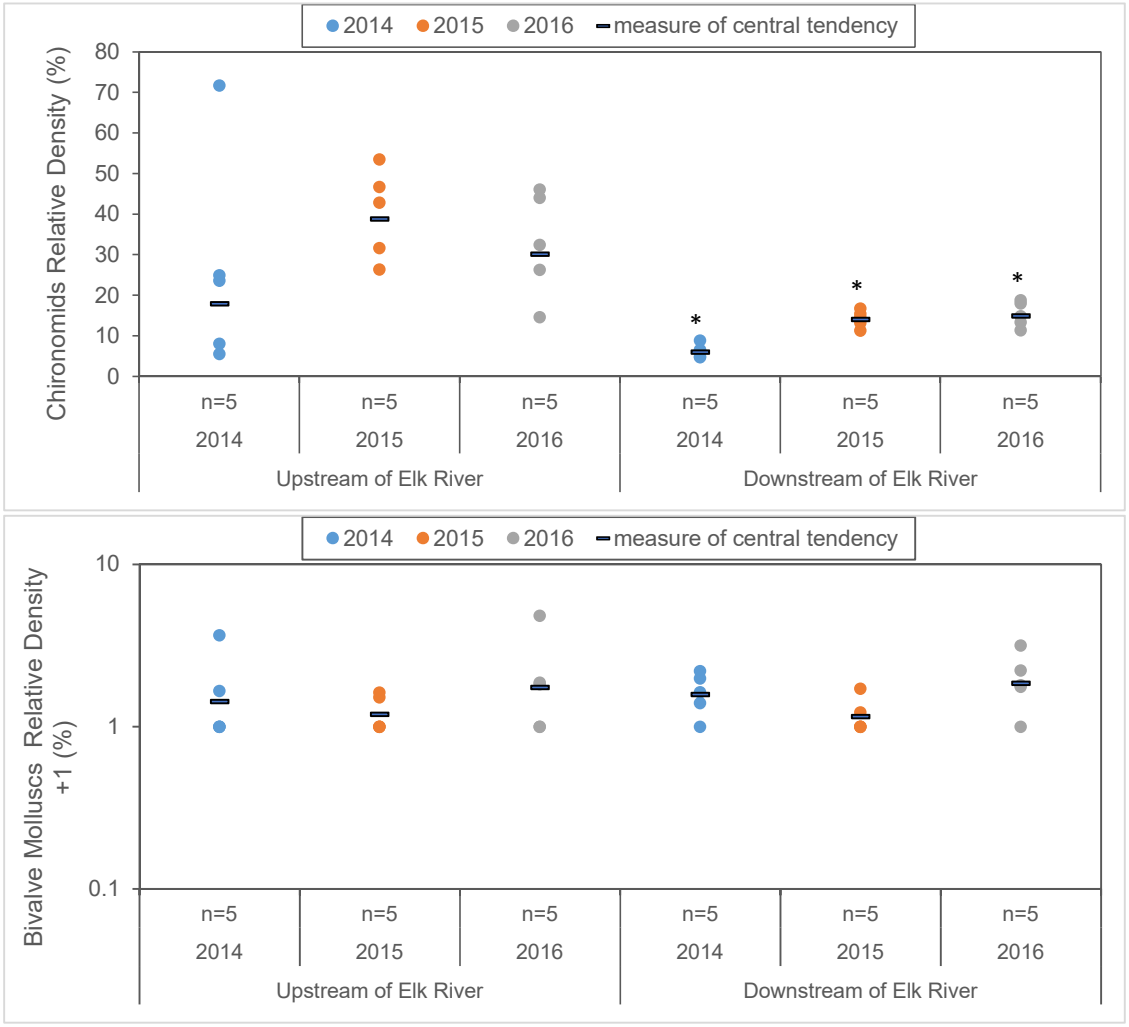

Figure E.2: Nemata, Oligochaetes, Ostracods, Chironomids, and Bivalve Molluscs Relative Density (%) in Koocanusa Reservoir, August 2014 to 2016

Notes: The upstream location was relocated further upstream from the mouth of the Elk River in August 2015 and 2016

' * ' indicates the downstream area was significantly different from the upstream area in the same year.

Table E.1: Benthic Sampling Locations in Koocanusa Reservoir, August 2014

Station Identifier		UTM (NAD 83, Zone 11U)		Station Depth (m)	Average Ponar Fullness	Sample Texture	Macrophytes in Sample	Algae in Sample	Comments
		Easting	Northing		% Fullness				
Upstream of Elk River	T2-2	629650	5450400	30.1	25%	100% sand and finer	sparce organic matter	No	mostly clay, hard packed on bottom
	T2-3	629417	5450394	19.2	33%	100% sand and finer	minimal organic matter	No	hard packed clay with minimal material on top
	T2-4	629235	5450445	19.5	33%	100% sand and finer	minimal organic matter	No	-
	T2-5	629059	5450389	20.0	75%	100% sand and finer, more organics than T2-2-4	some dead organic matter	No	-
	T2-6	628883	5450370	18.3	100%	100% sand and finer	dead organic matter common	No	-
Downstream of Elk River	T4-2	630076	5441806	27.8	100%	100% sand and finer	No	No	-

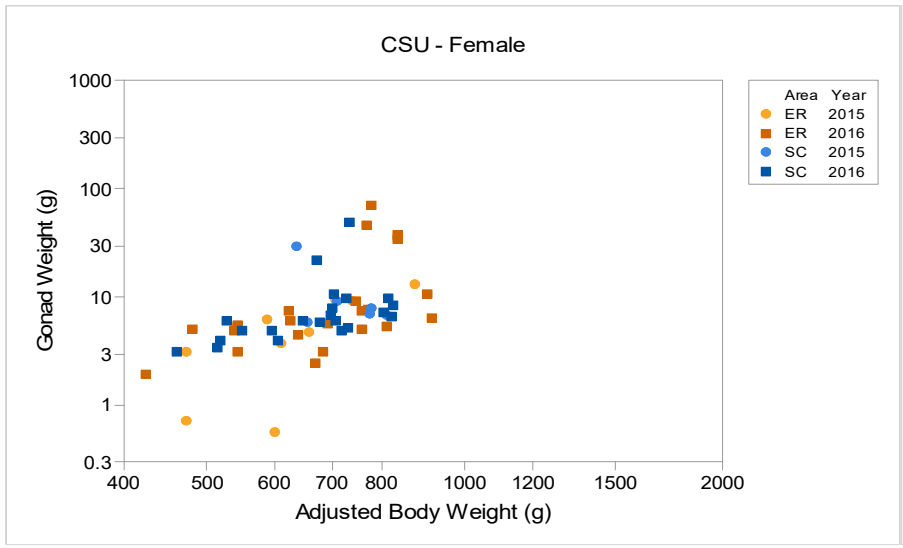
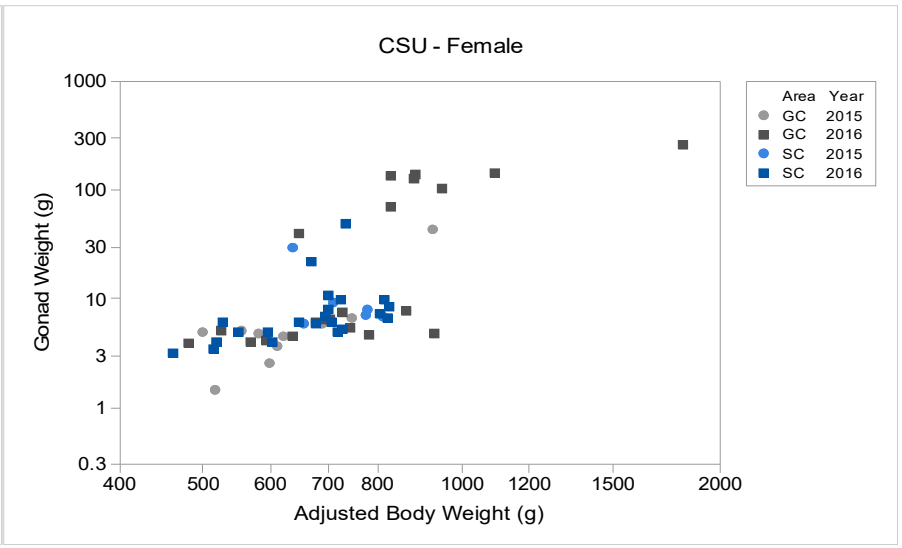
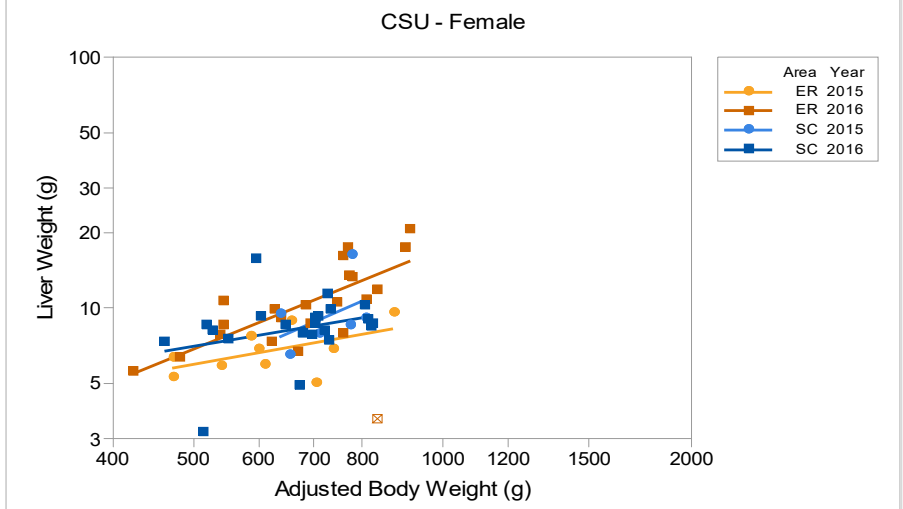
- Pearson correlation coefficients greater than an absolute value of 0.5.
- Pearson correlation with p-value less than 0.05.

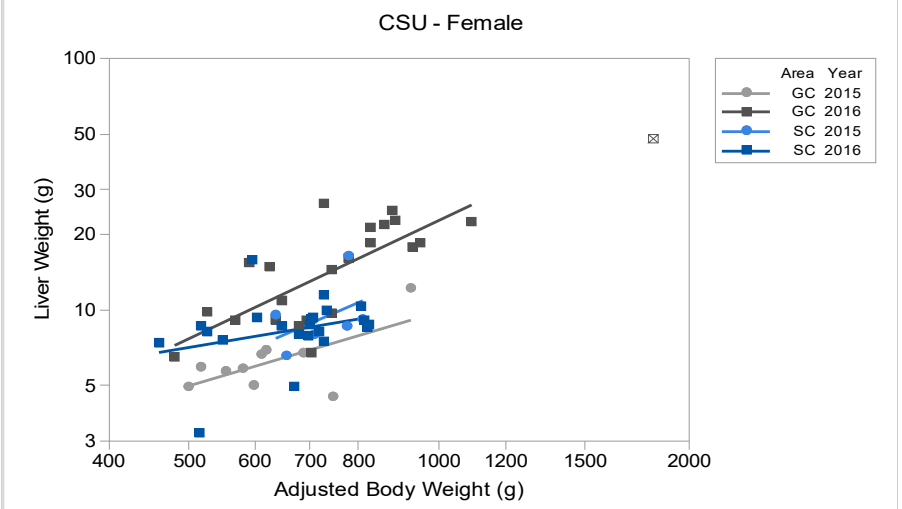
APPENDIX F
FISH DATA

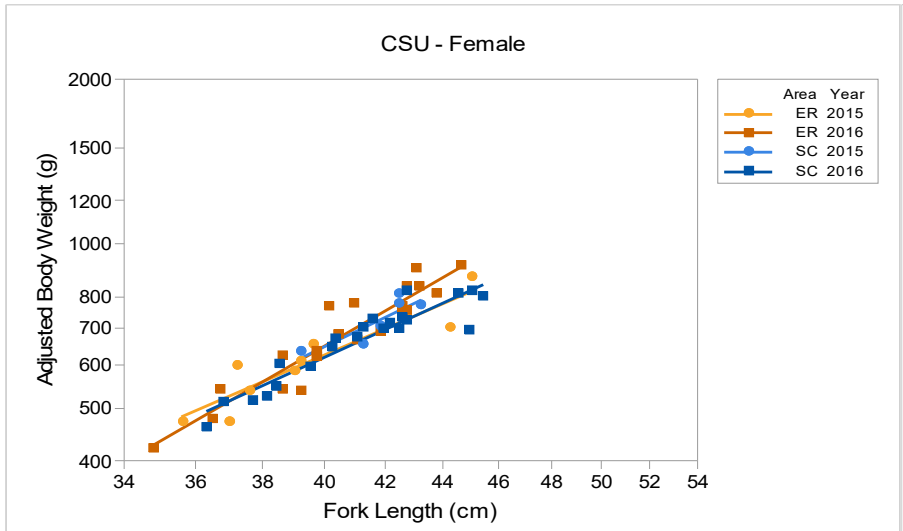
Angling
Burbot Trap
Gill Net
Hoop Net
Minnow Trap

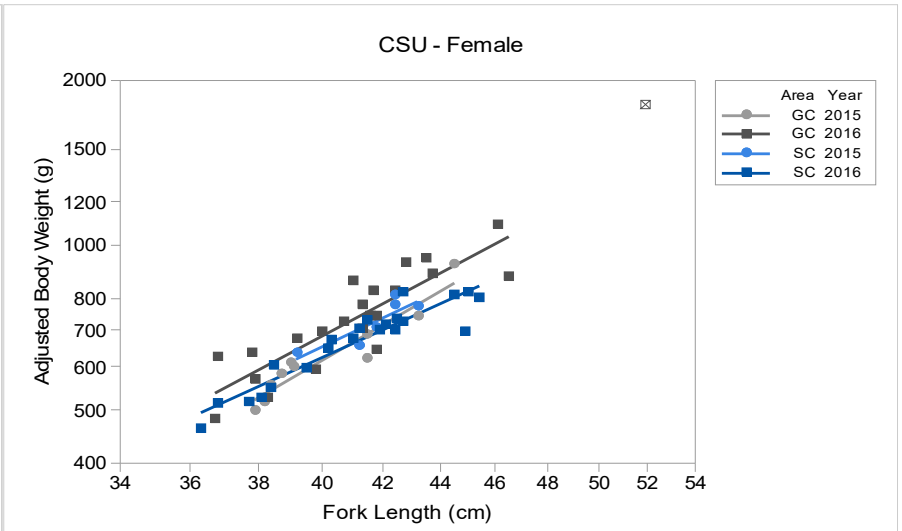


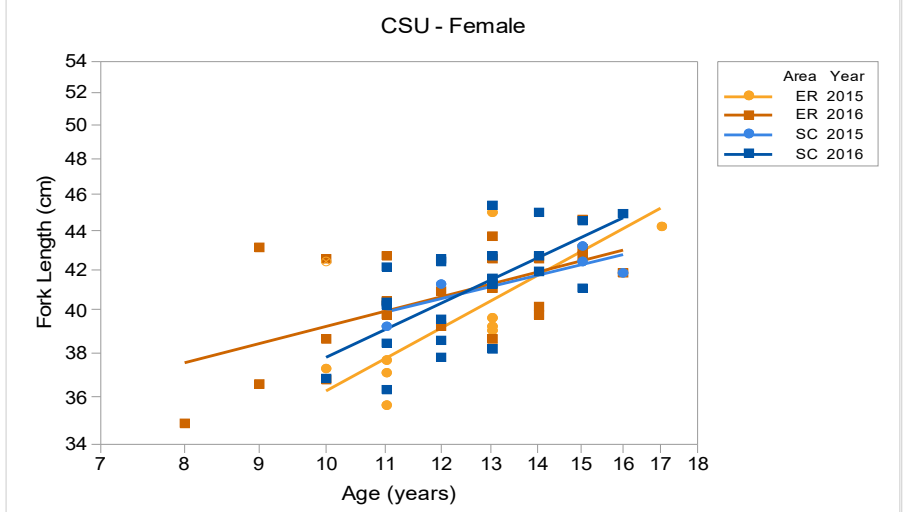


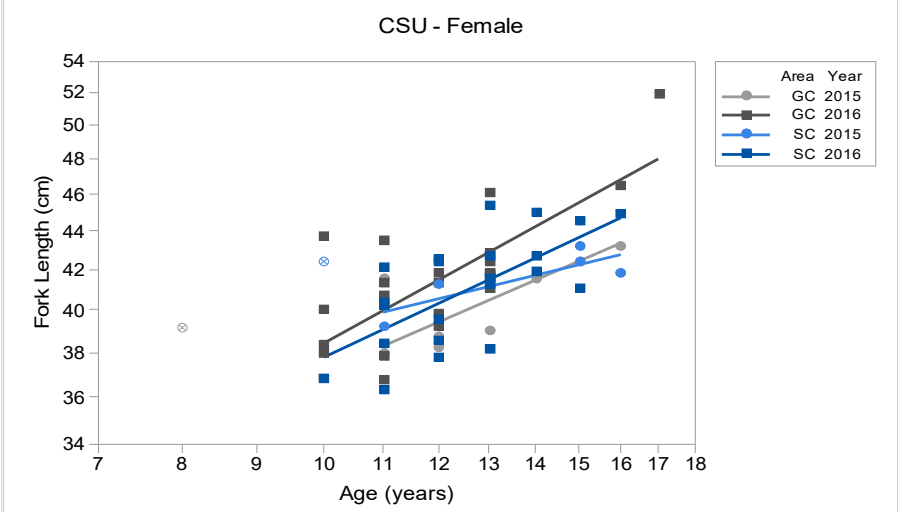


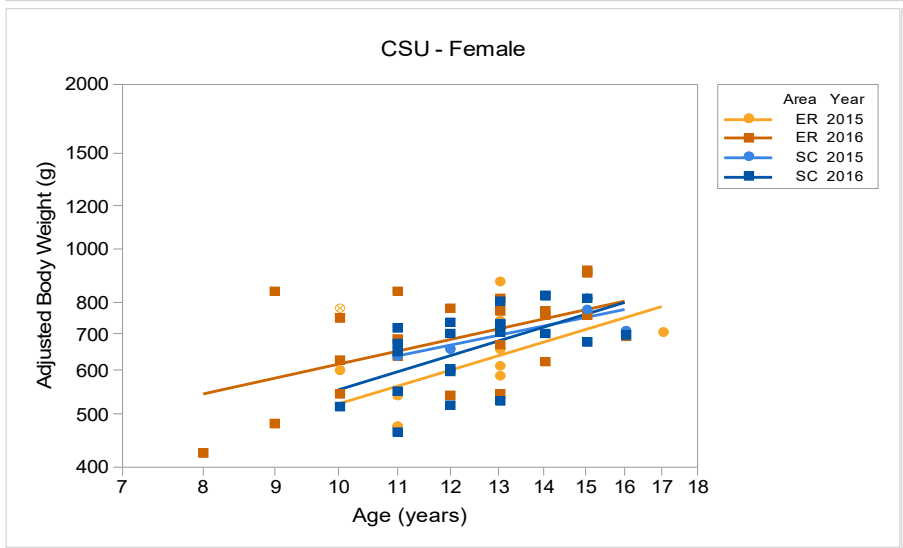












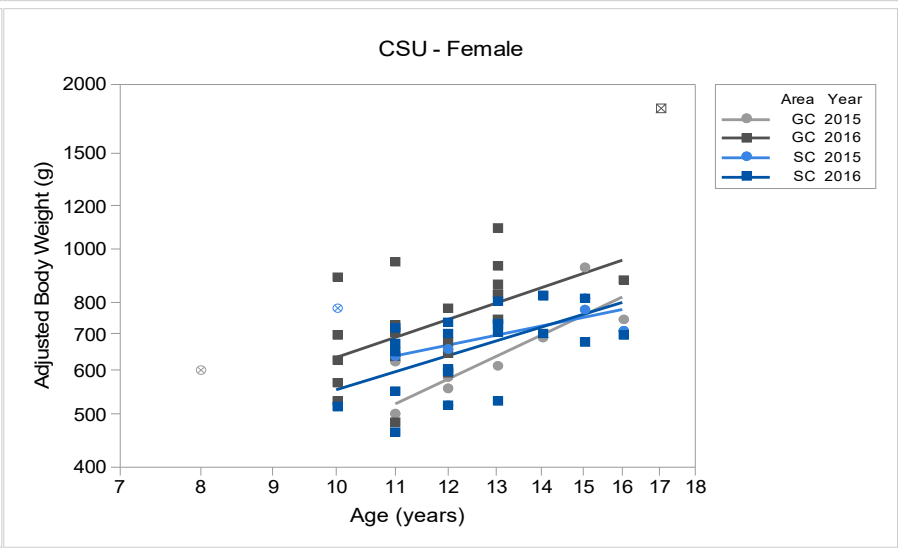


Figure F.1: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2015 and 2016 for Female Largescale Sucker (CSU)

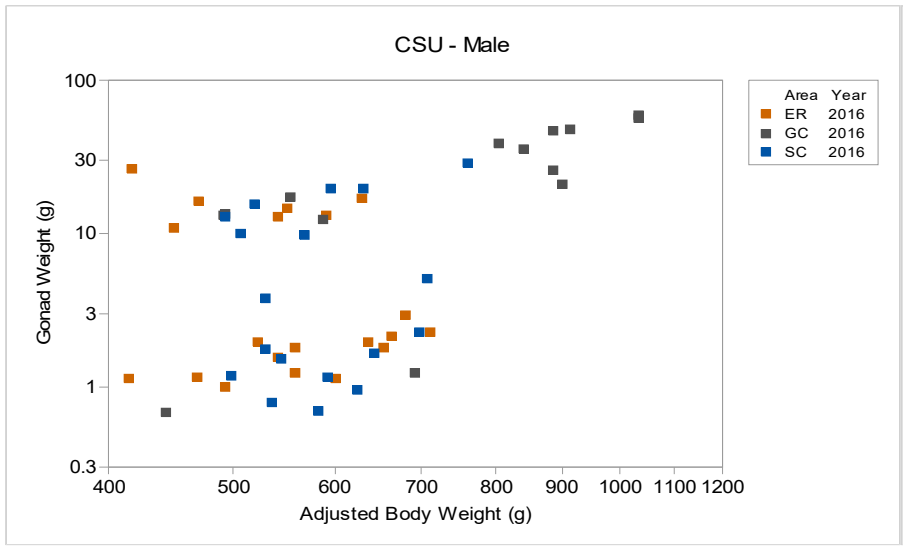
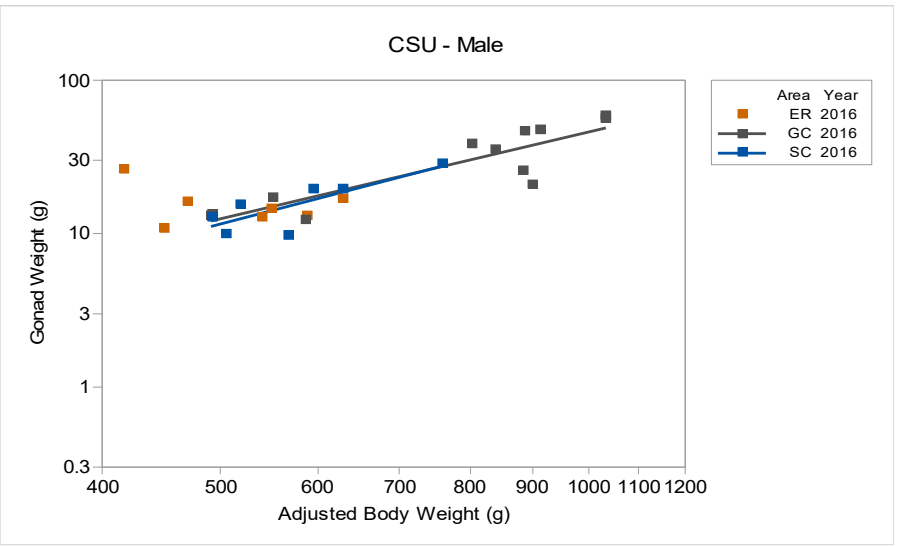
Notes:

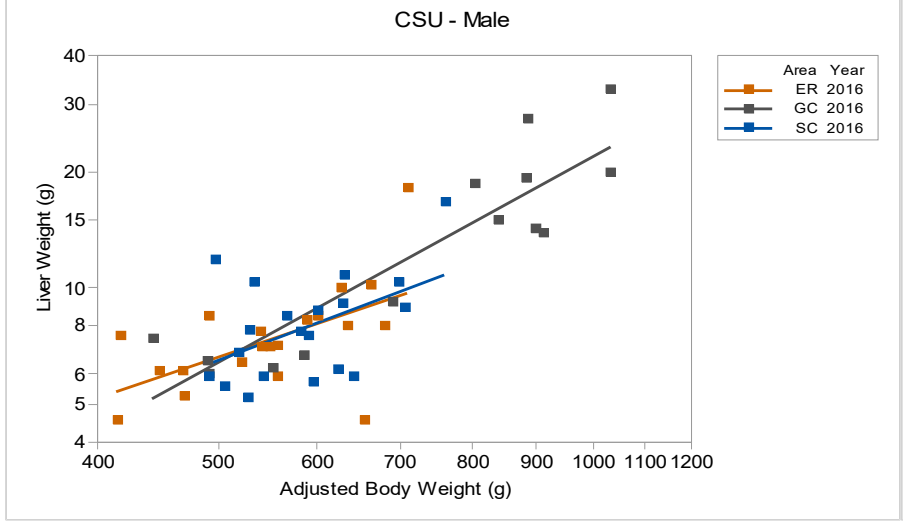
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

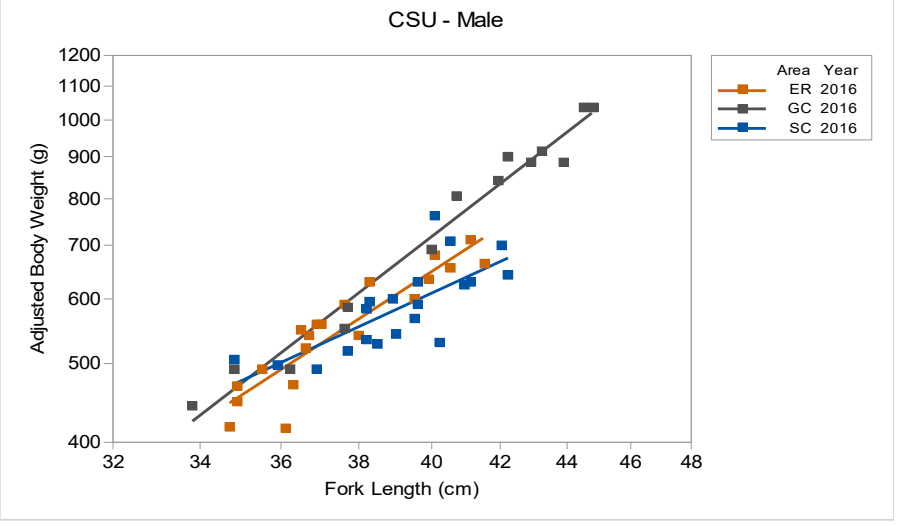
Fish with worms were excluded from the gonad weight comparisons.

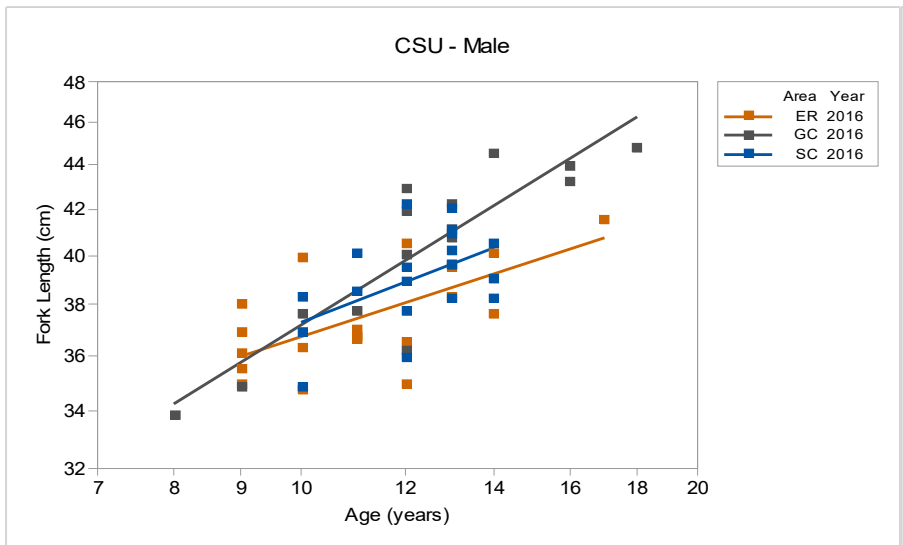
Statistical analyses were not conducted for relative gonad weight because few fish had developping gonads (the majority of fish had GSI < 1%; see Appendix Figure F.11).











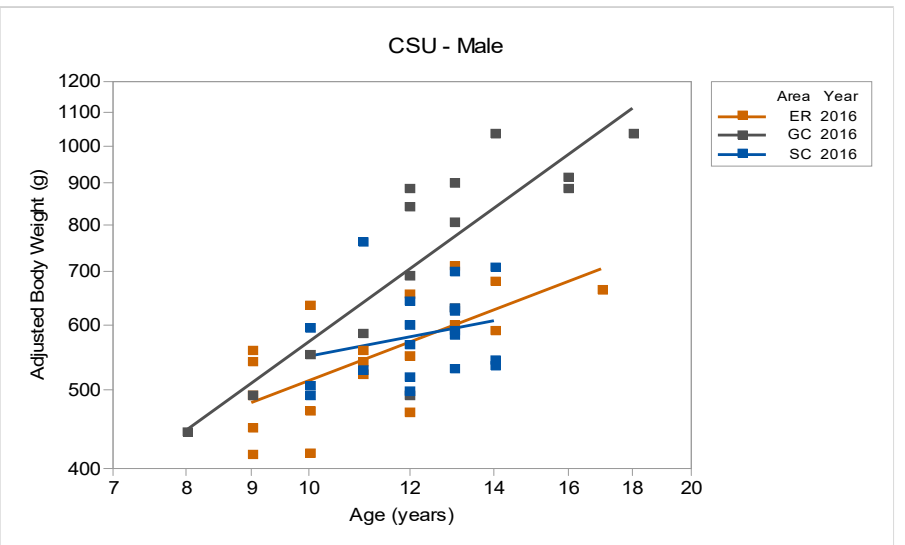


Figure F.2: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2016 for Male Largescale Sucker (CSU)

Notes:

Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

Fish with worms were excluded from the gonad weight comparisons.

Statistical analyses were conducted for relative gonad weight using on fish with developping gonads (the majority of fish had GSI < 1%) using ANOVA for ER vs SC and ANCOVA for GC vs SC.

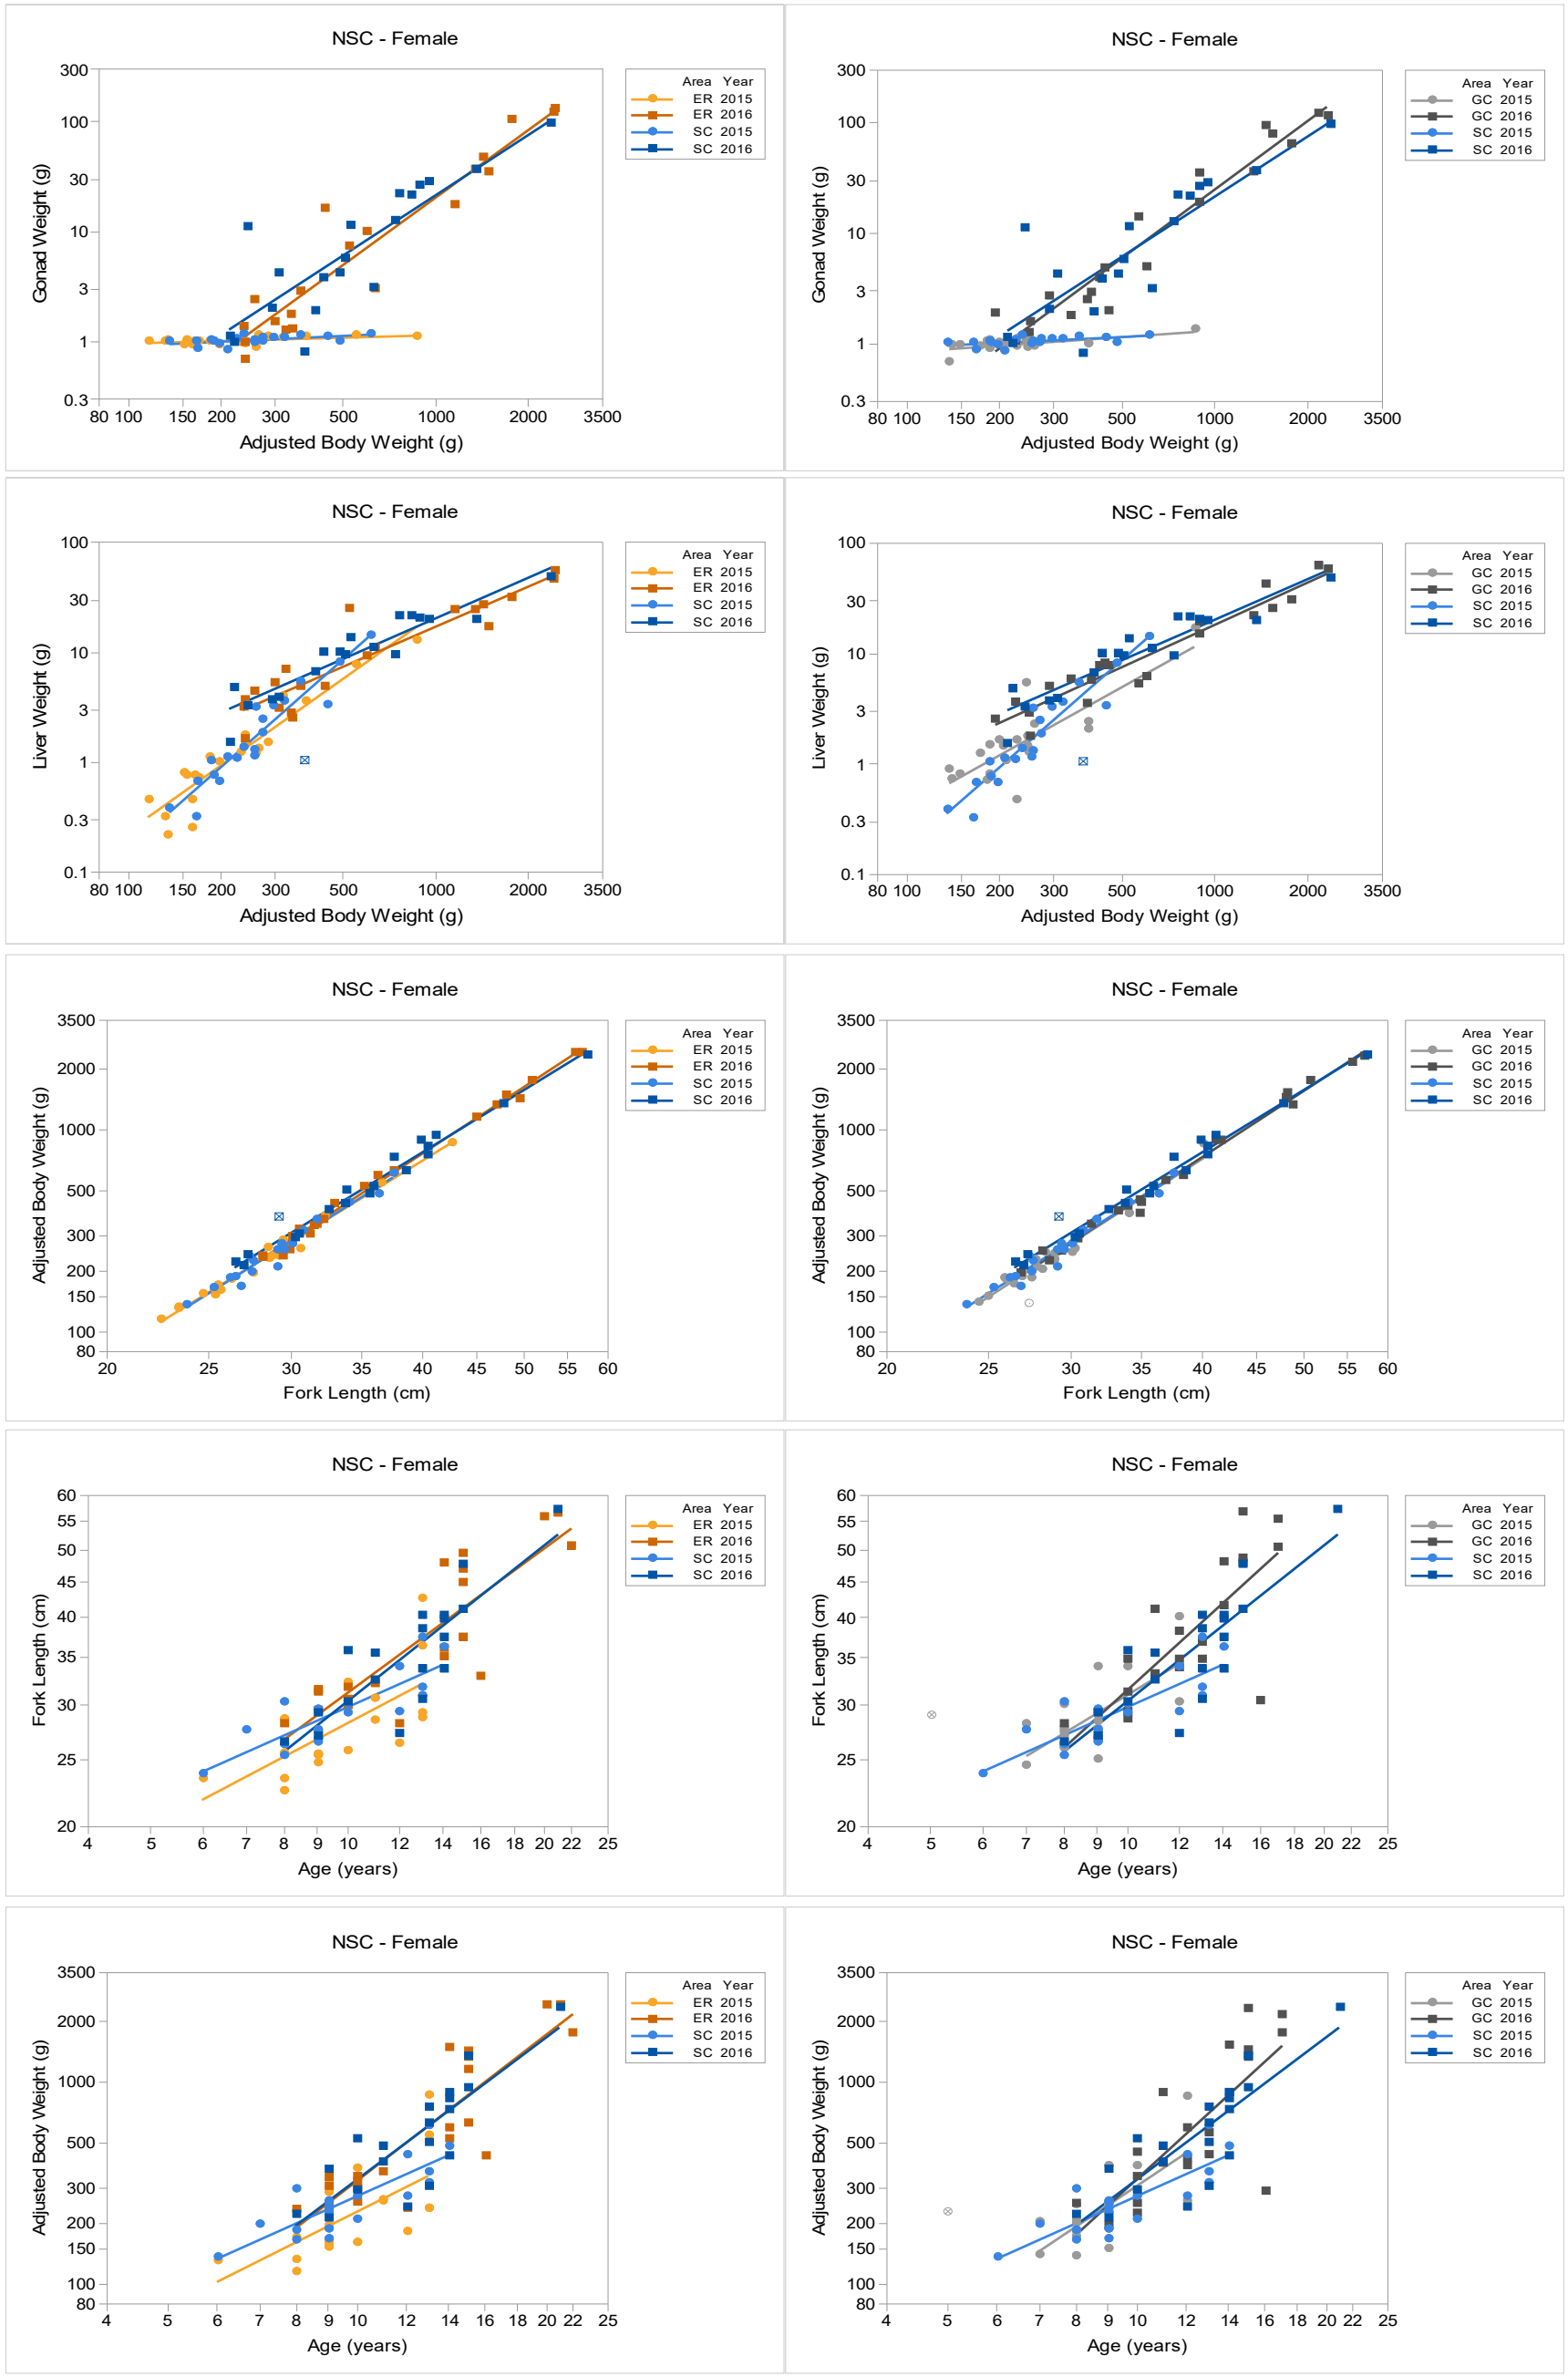

Figure F.3: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2015 and 2016 for Female Northern Pikeminnow (NSC)

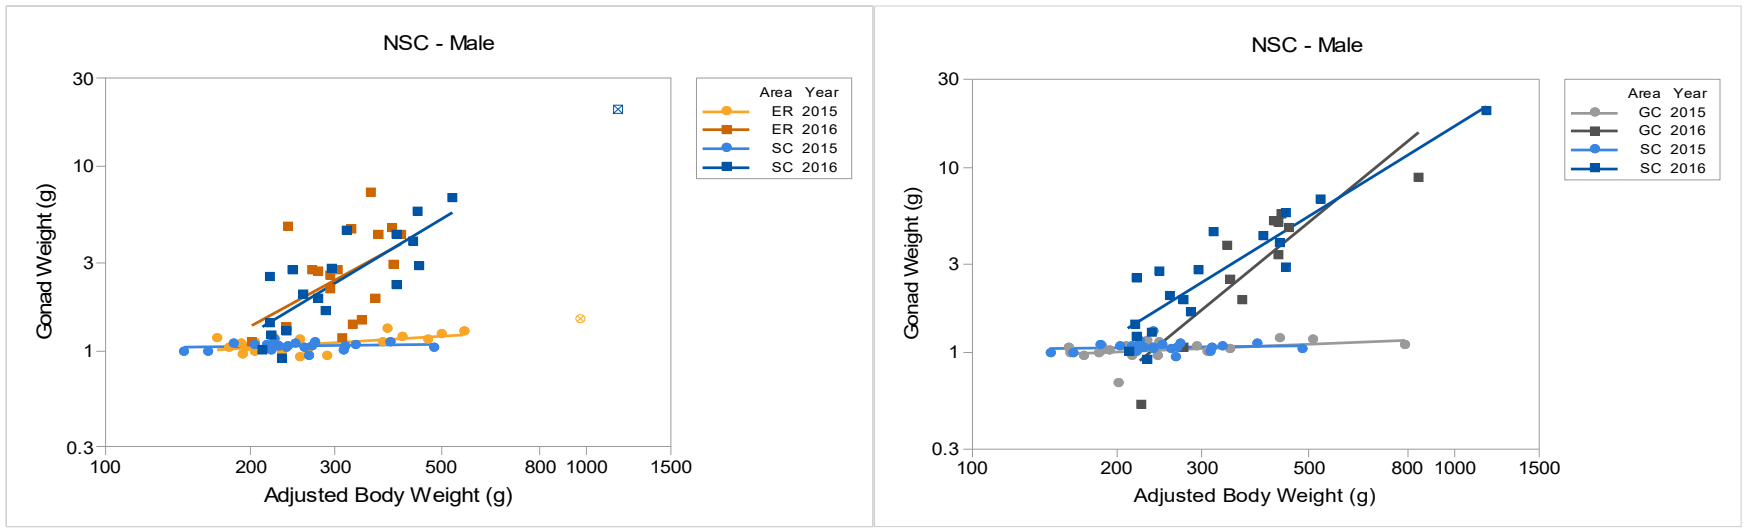
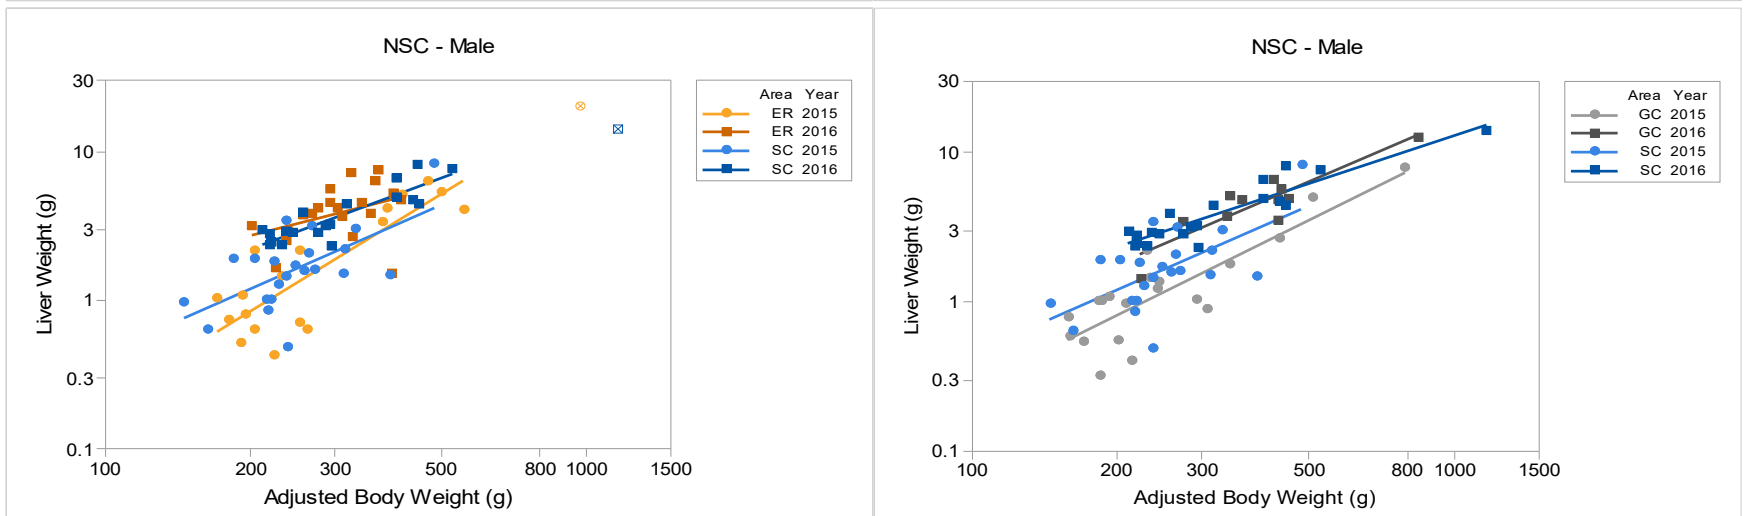
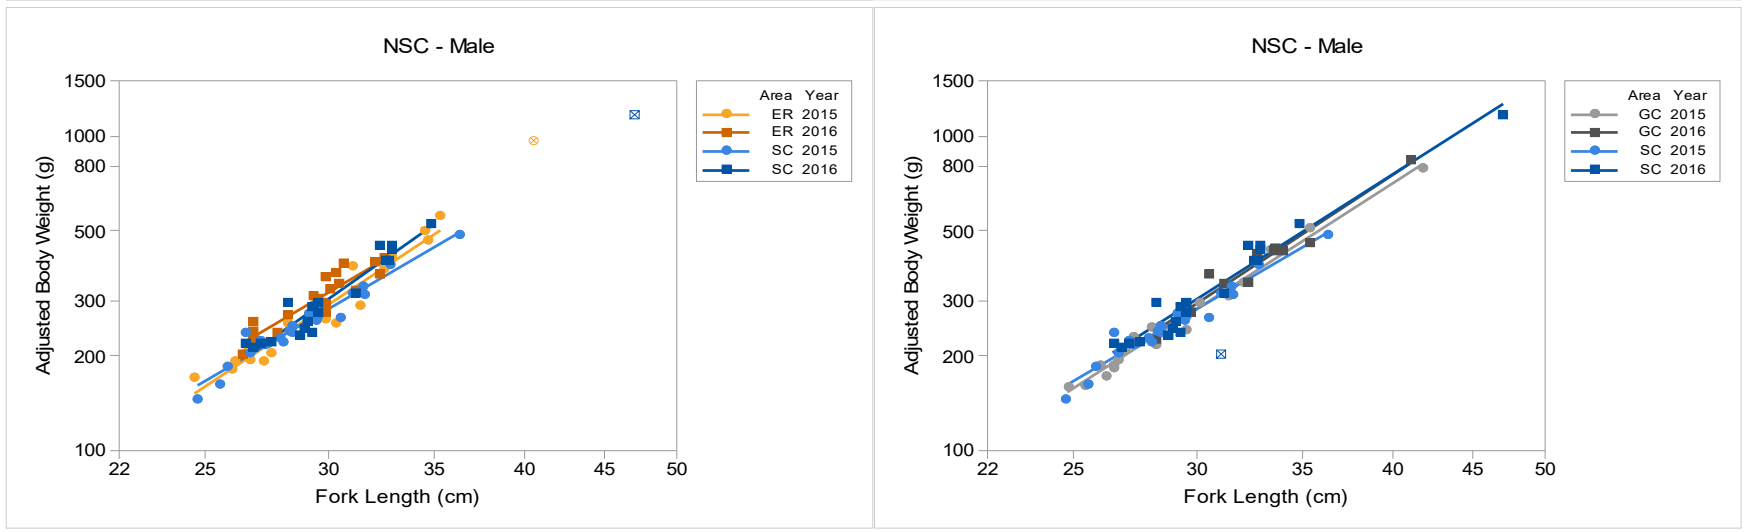
Notes:

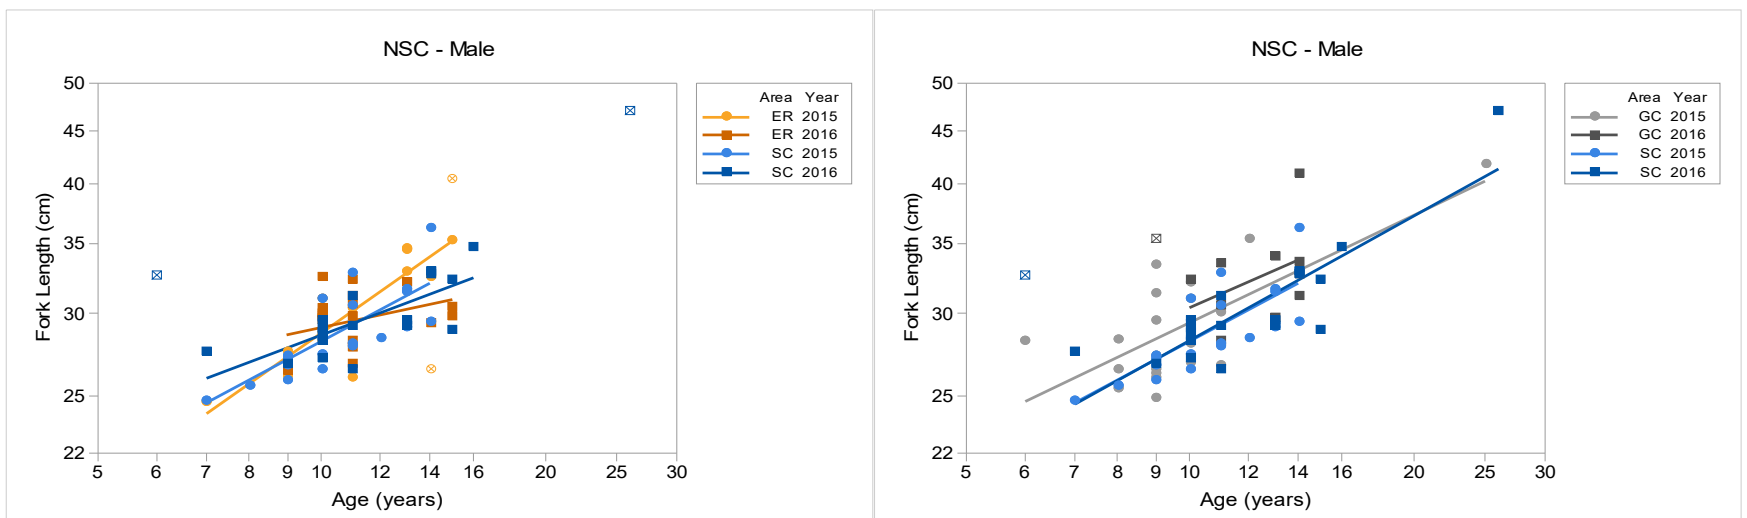
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

Fish with worms were excluded from the gonad weight comparisons









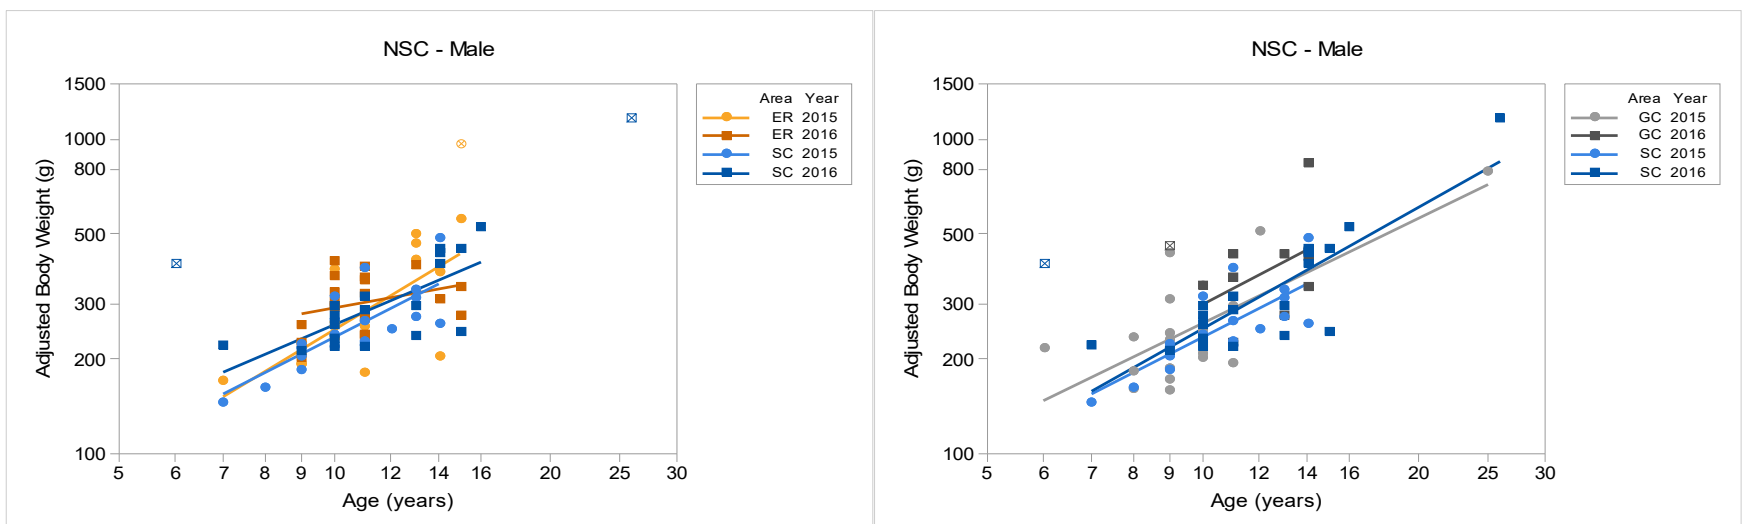


Figure F.4: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2015 and 2016 for Male Northern Pikeminnow (NSC)

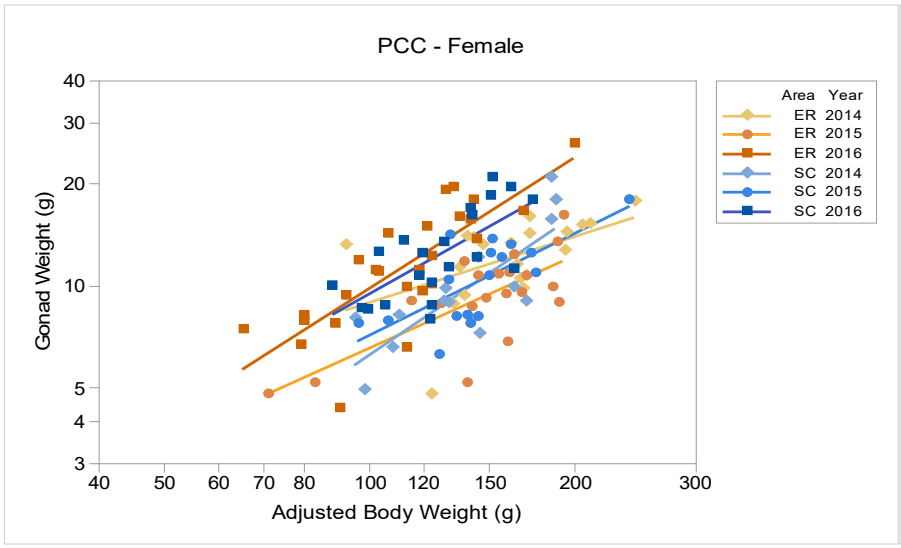
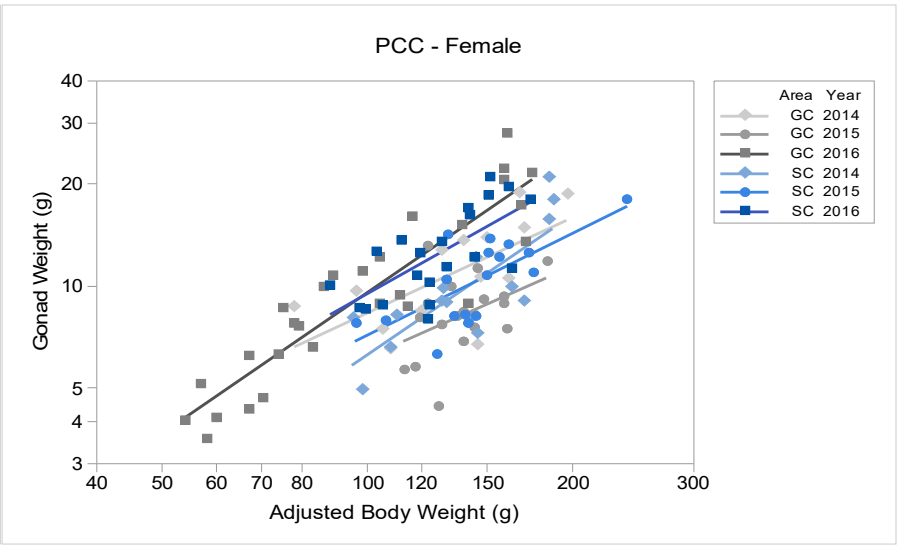
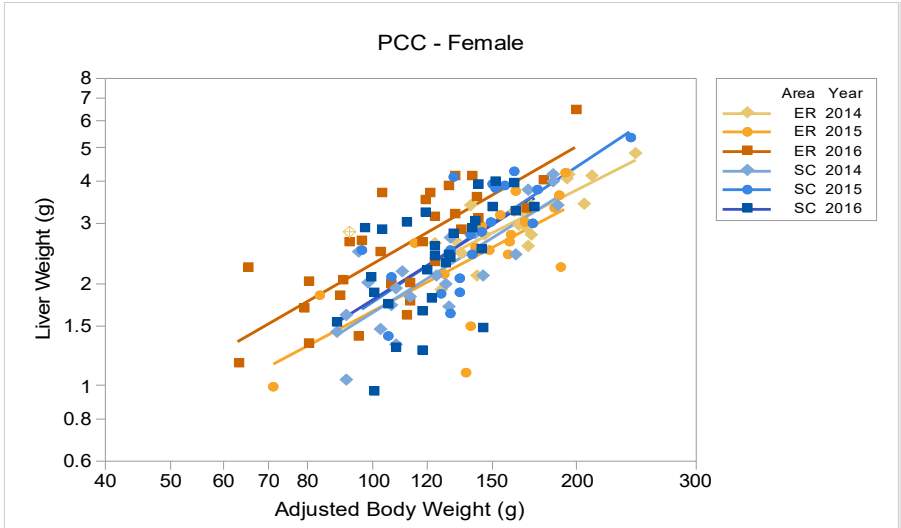
Notes:

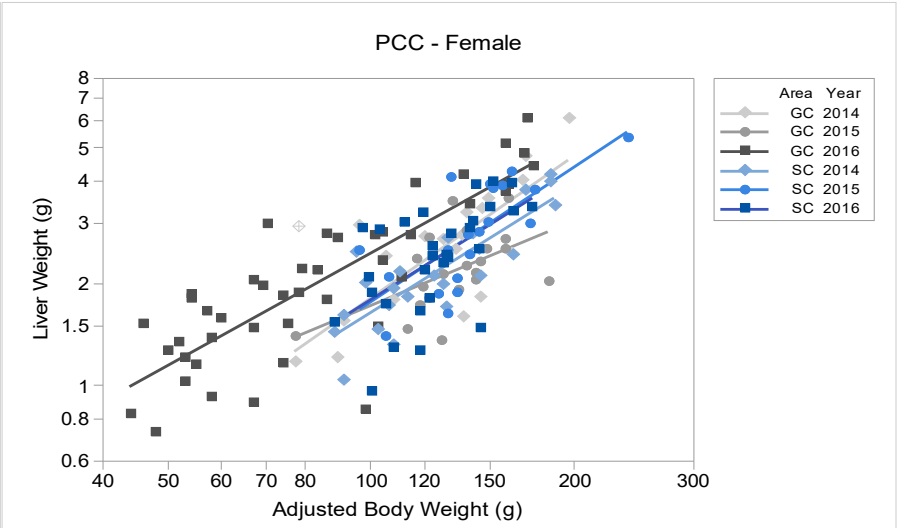
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

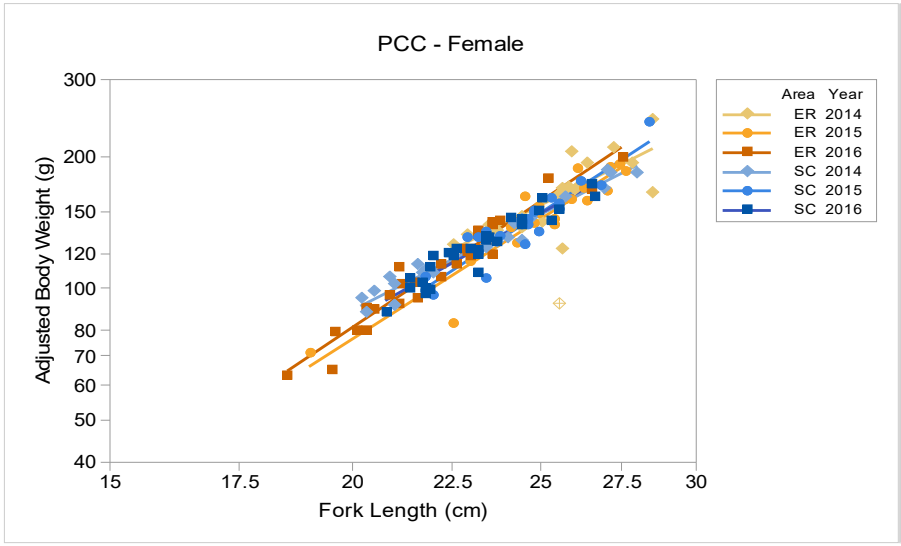
Fish with worms were excluded from the gonad weight comparisons

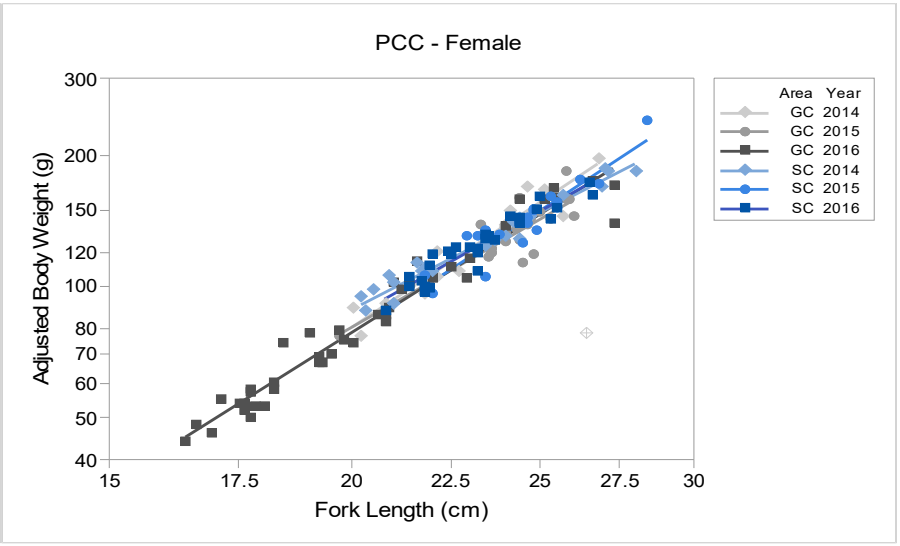


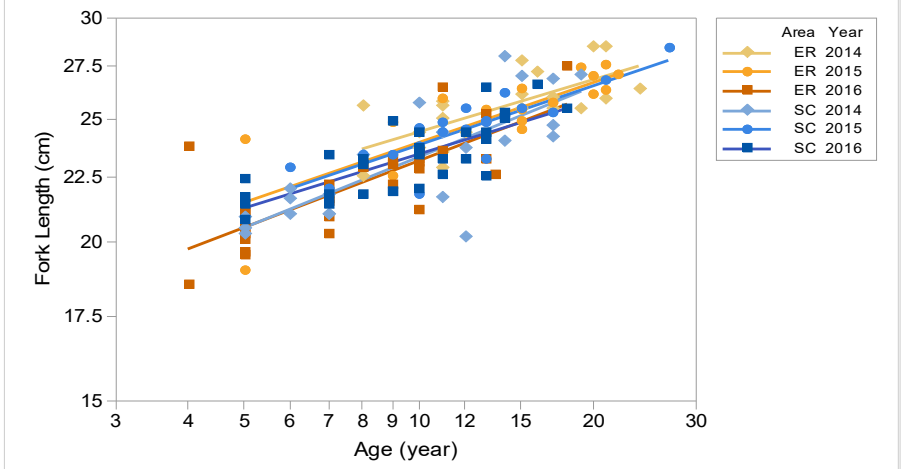


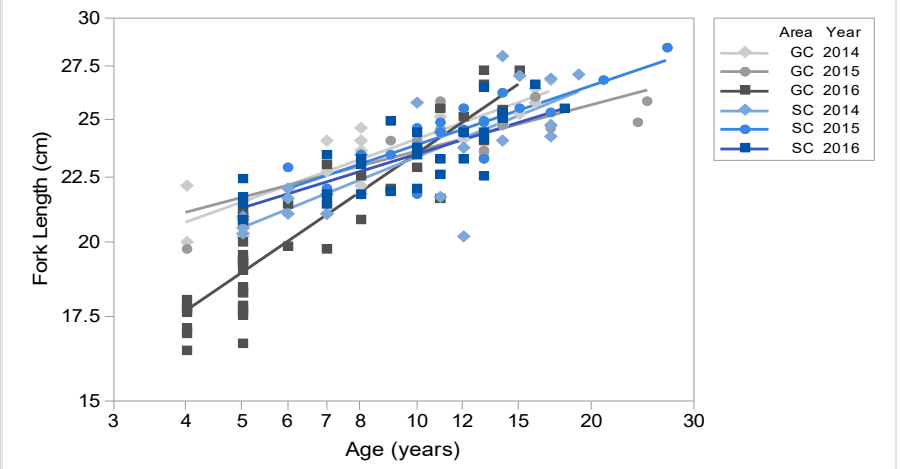


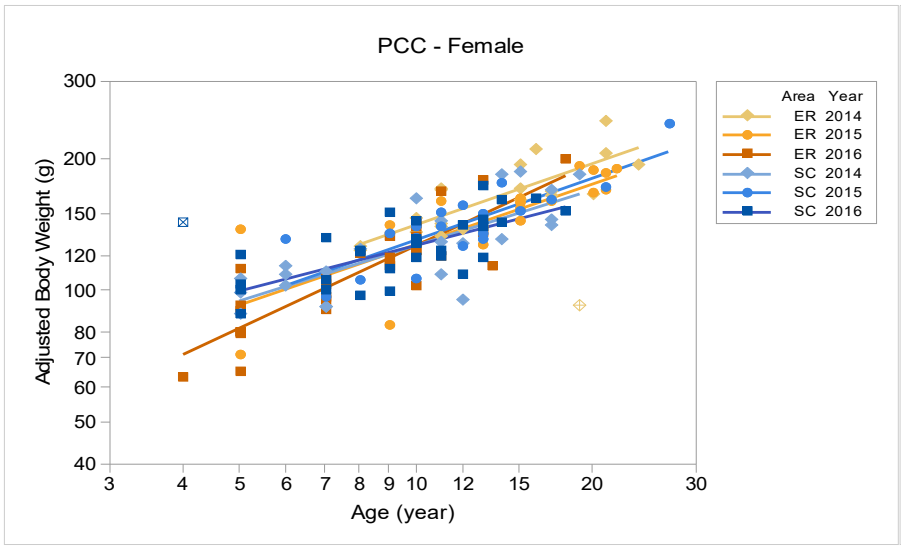












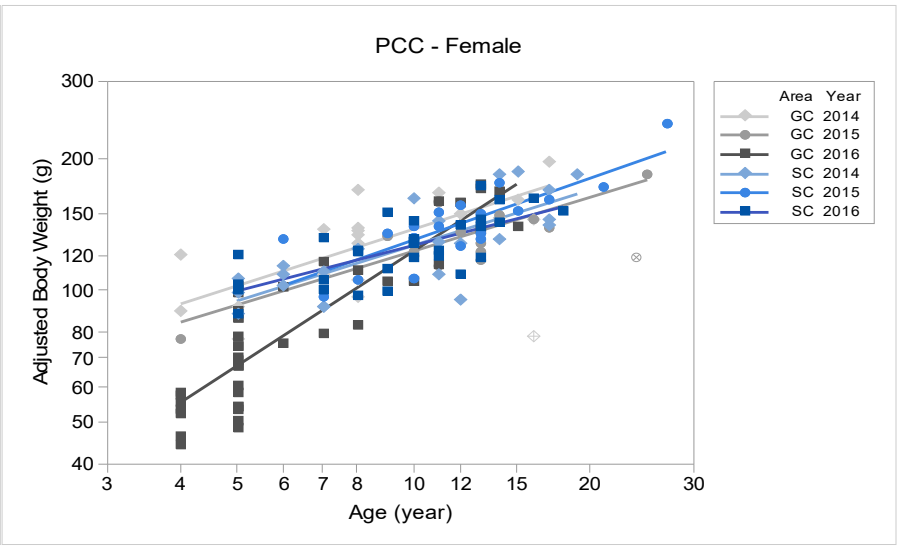


Figure F.5: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2014 to 2016 for Female Peamouth Chub (PCC)

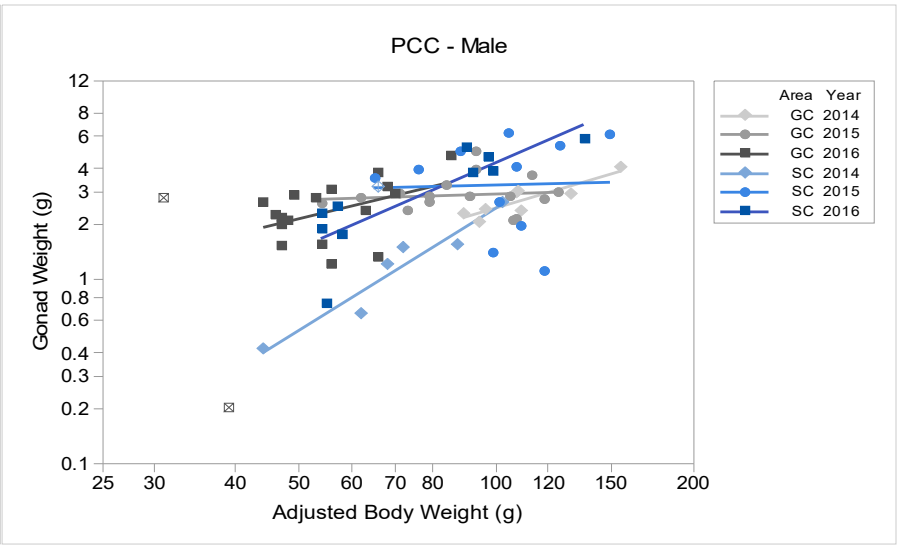
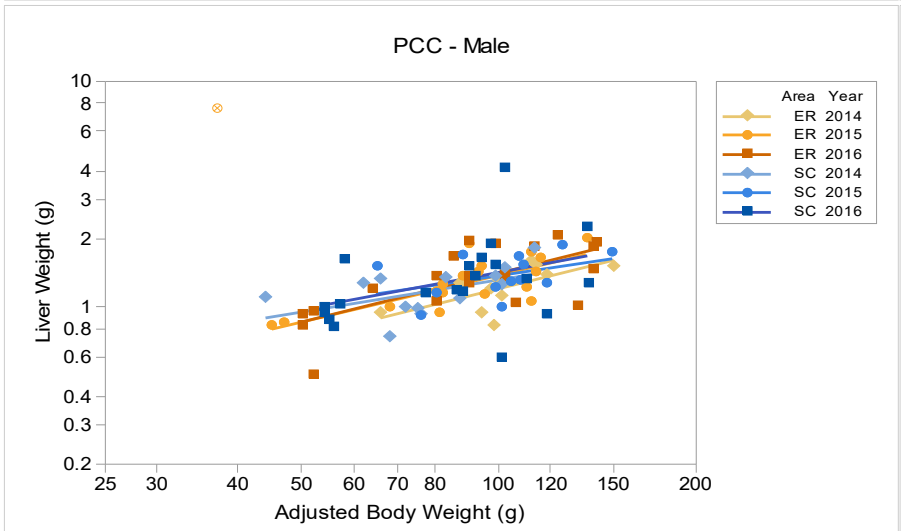
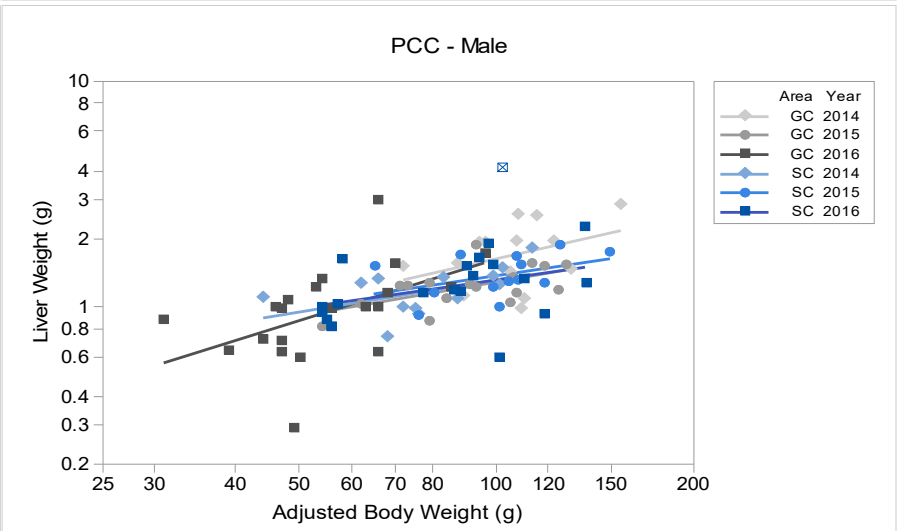
Notes:

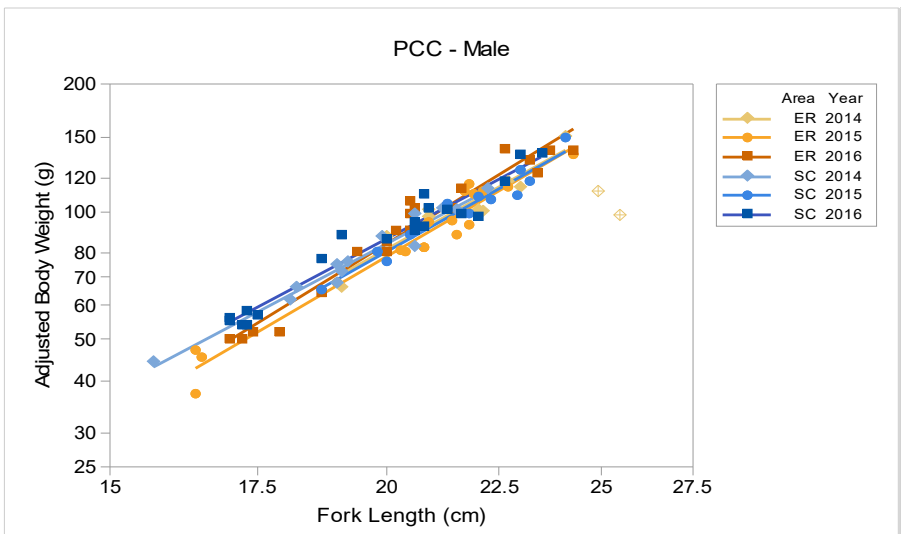
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

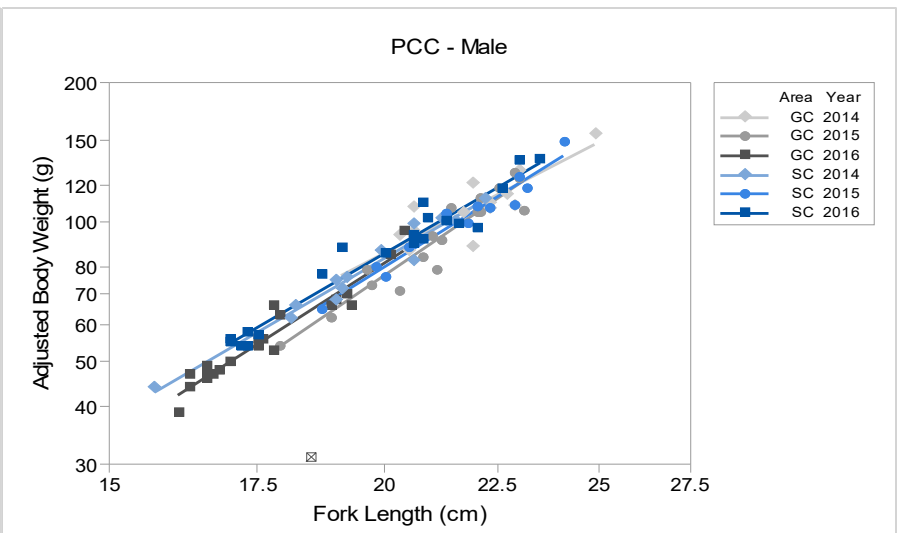
Fish with worms were excluded from the gonad weight comparisons

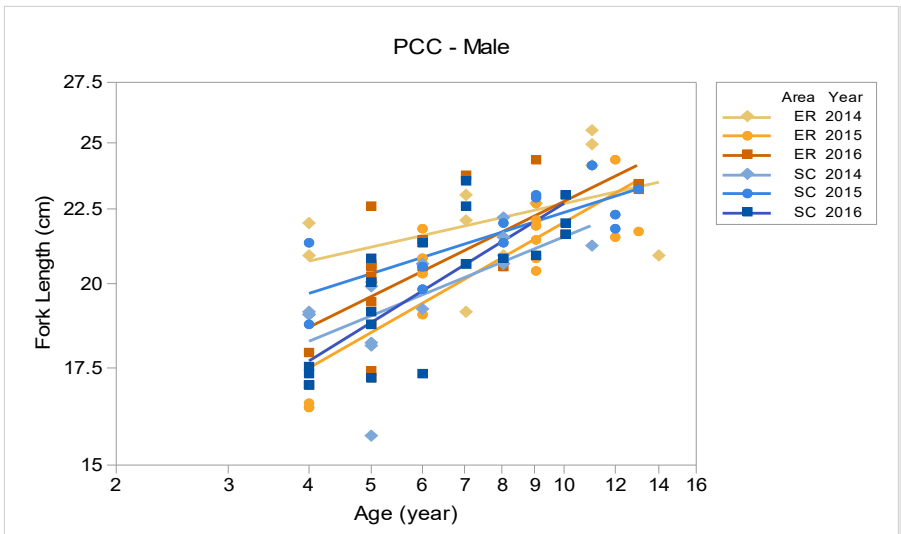


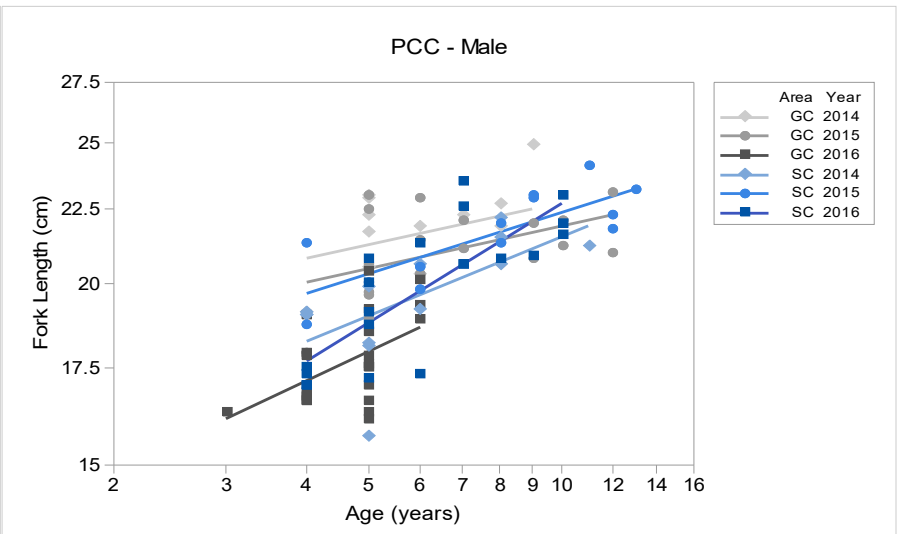


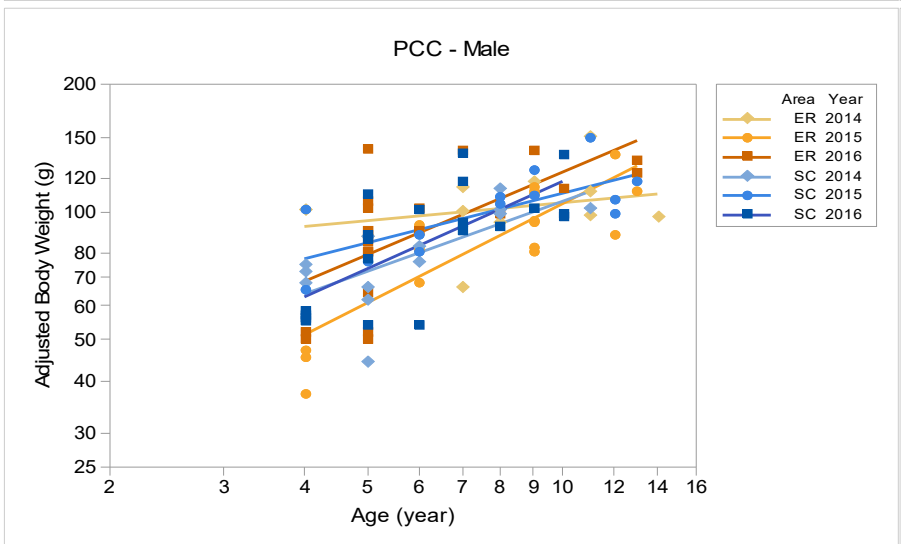












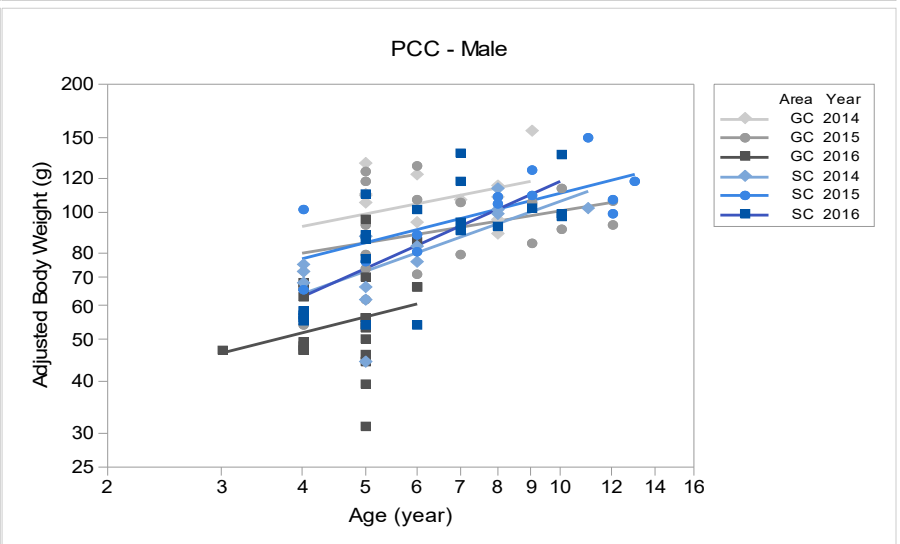


Figure F.6: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2014 to 2016 for Male Peamouth Chub (PCC)

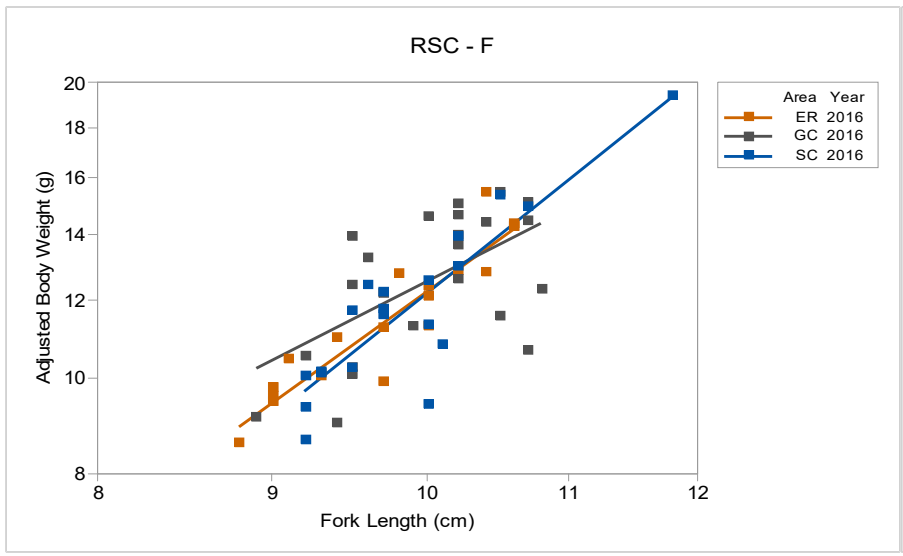
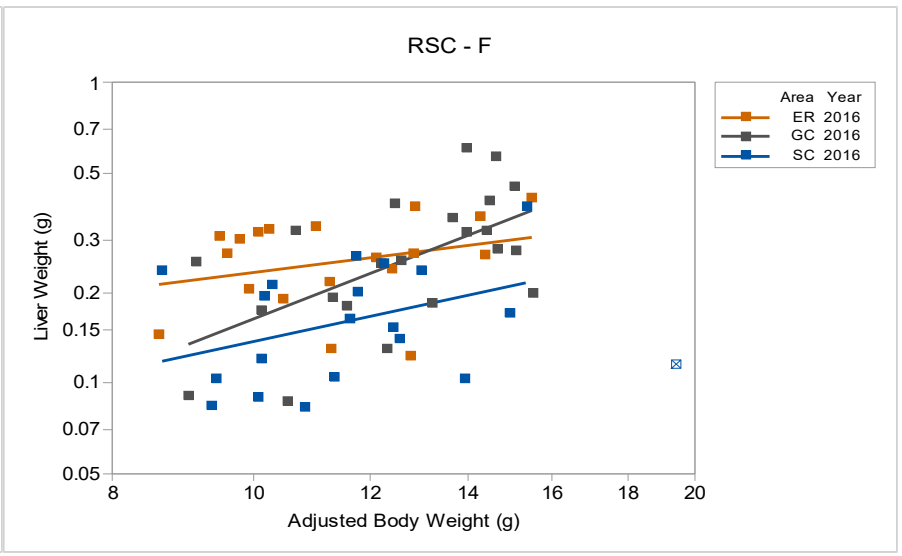
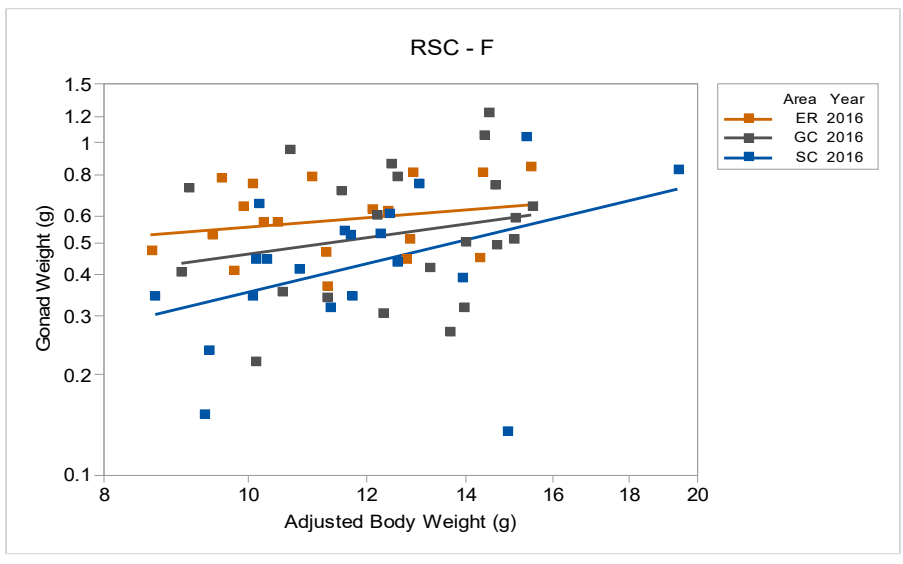
Notes:

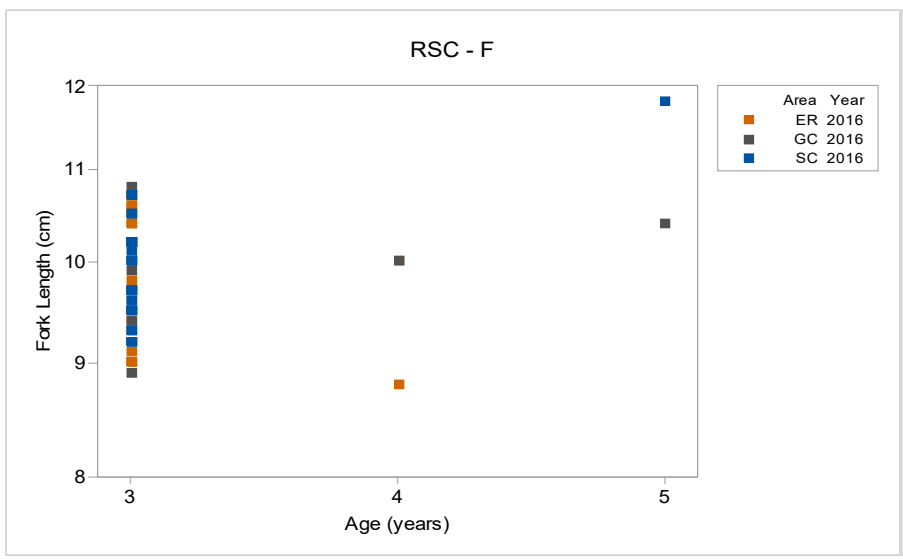
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

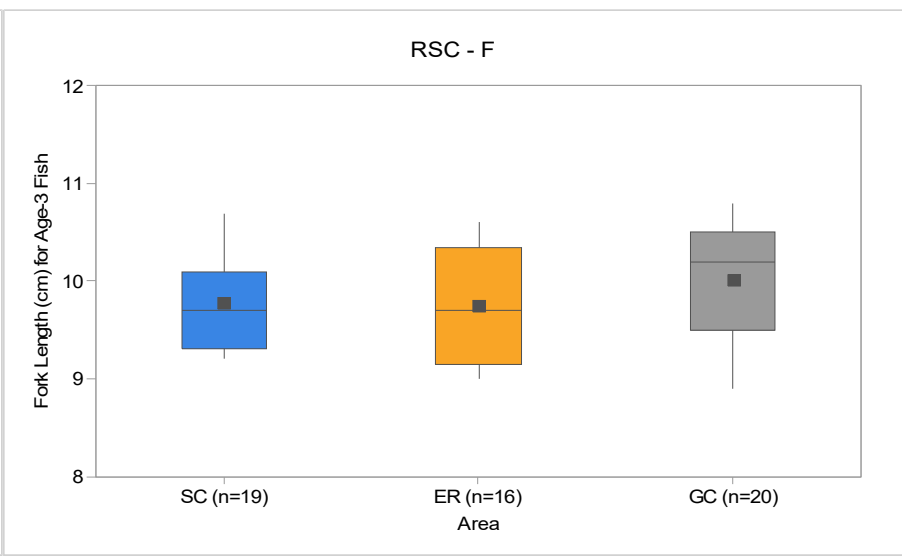
Fish with worms were excluded from the gonad weight comparisons

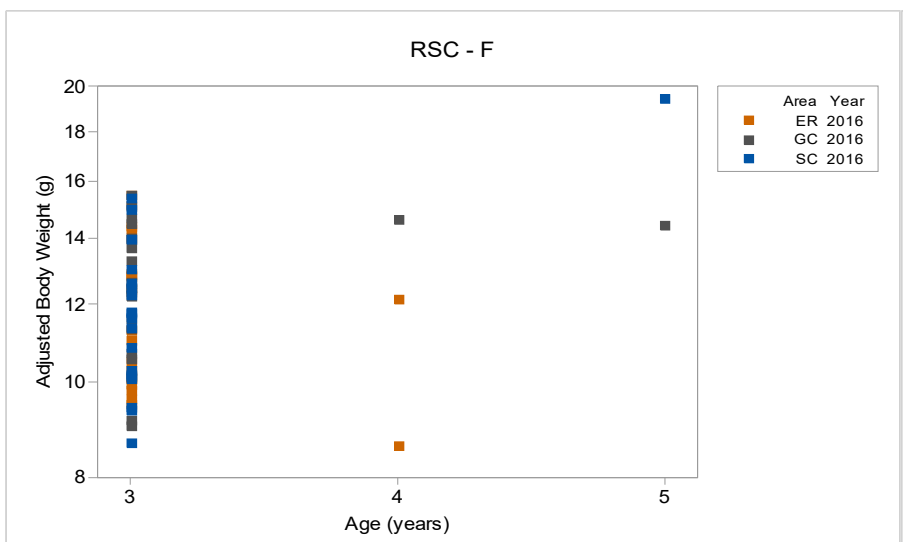












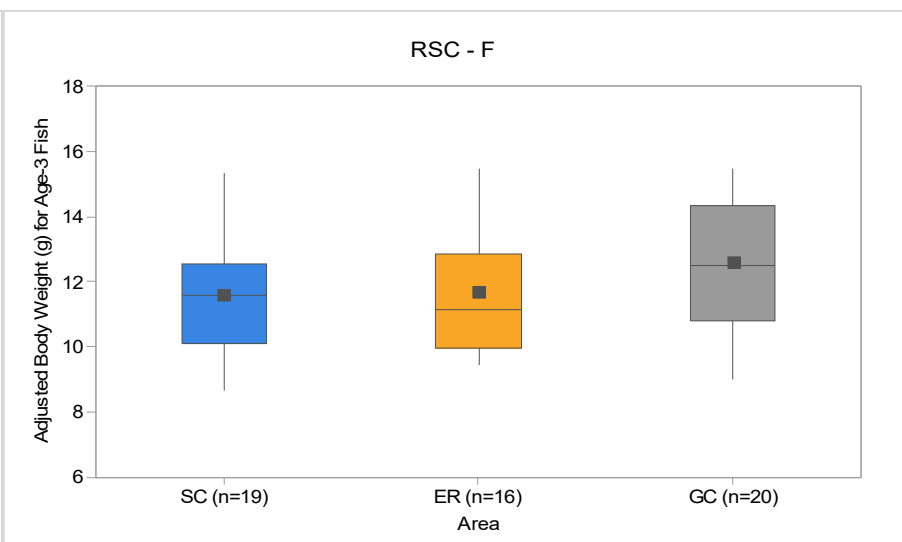


Figure F.7: Scatterplots and Linear Regressions or Boxplots for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2016 for Female Redside Shiner (RSC)

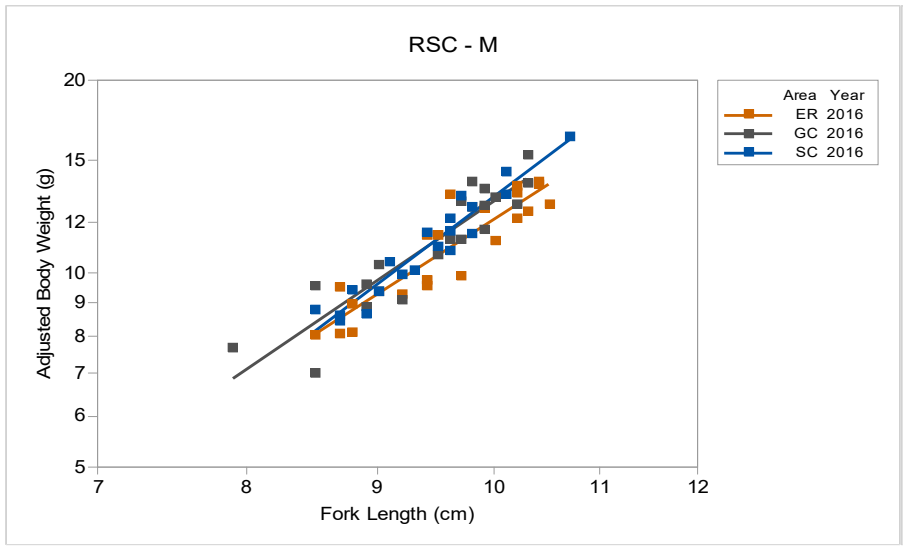
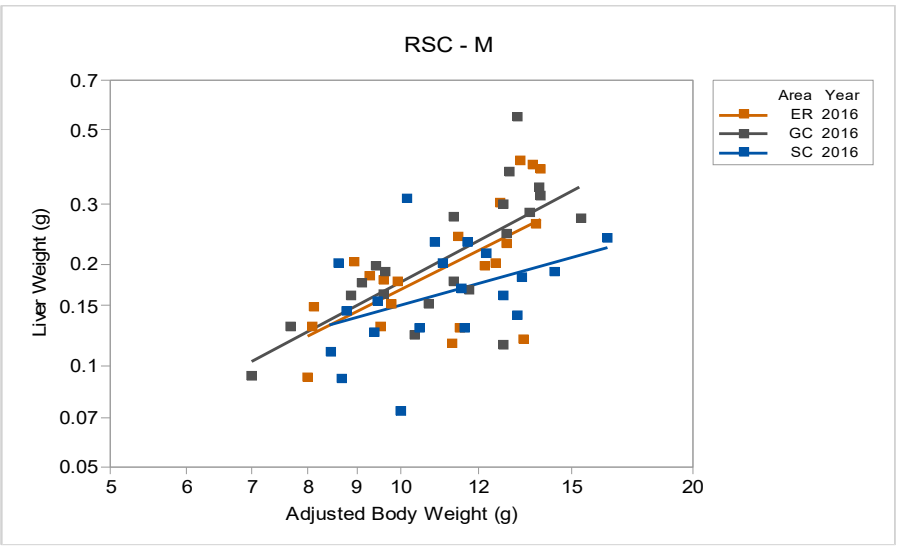
Notes:

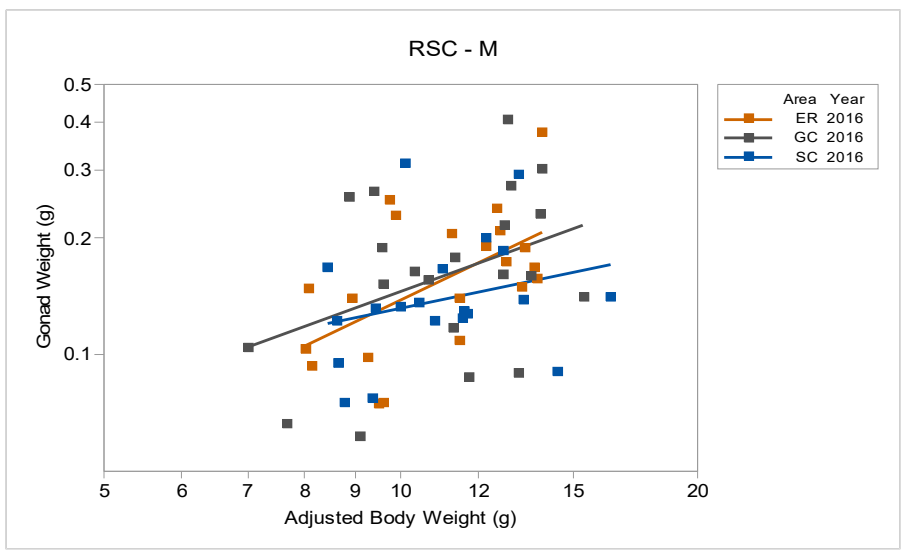
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

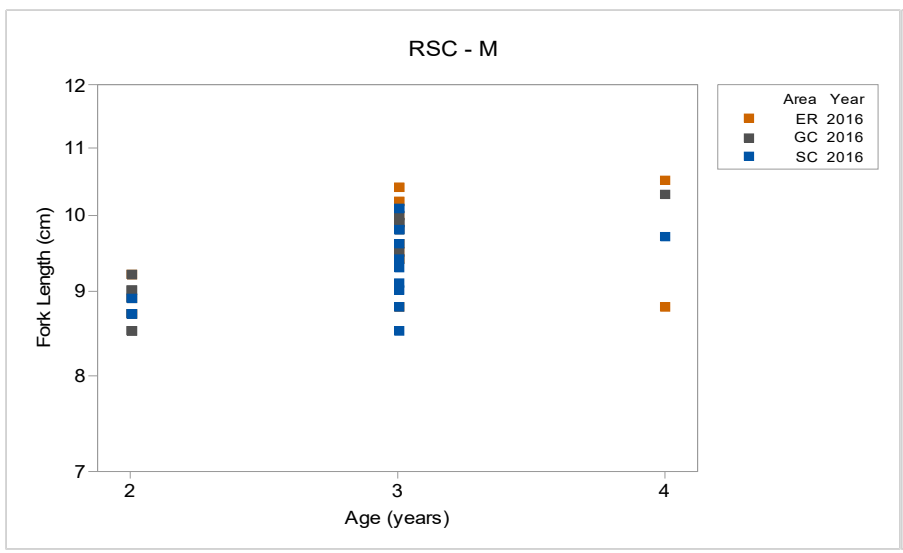
Weight-at-age and Length-at-age were assessed statisiticall as the weight and length of age-3 fish

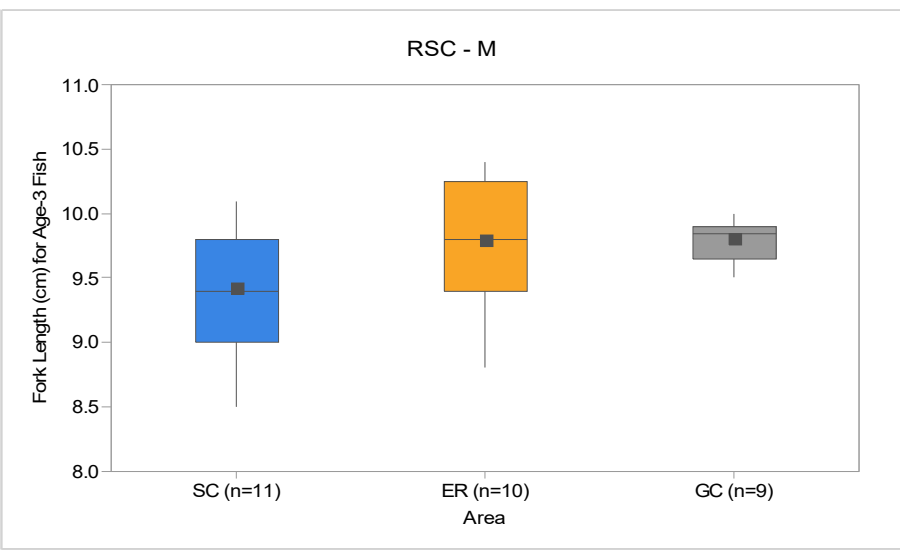
Boxplots: The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a square symbol.

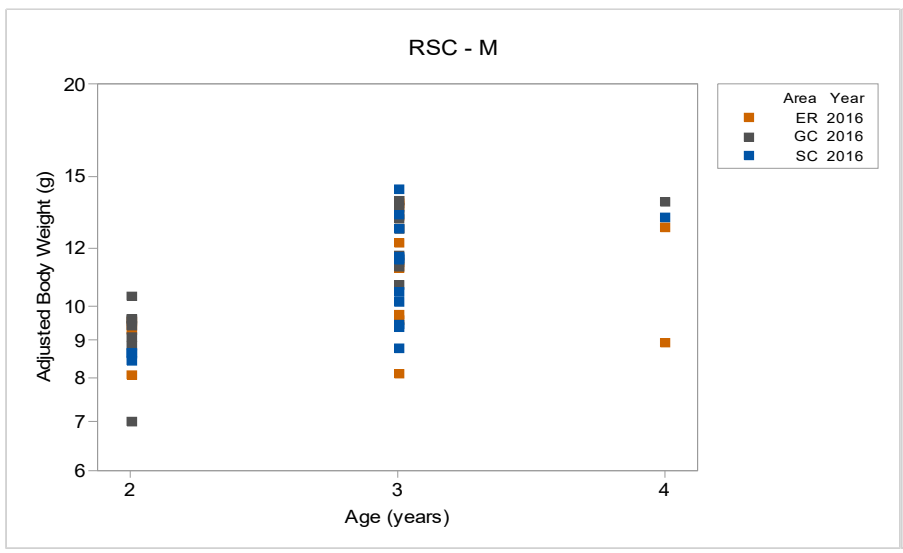












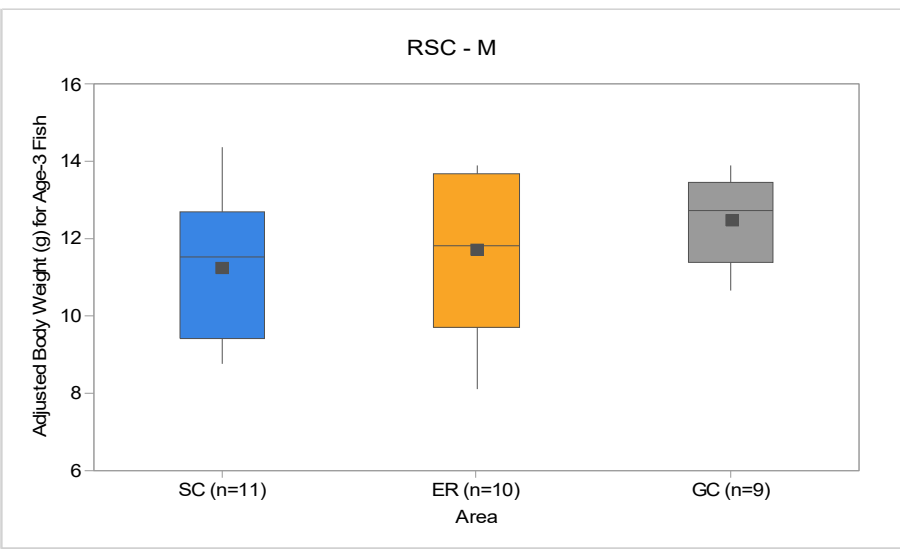


Figure F.8: Scatterplots and Linear Regressions or Boxplots for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2016 for Male Redside Shiner (RSC)

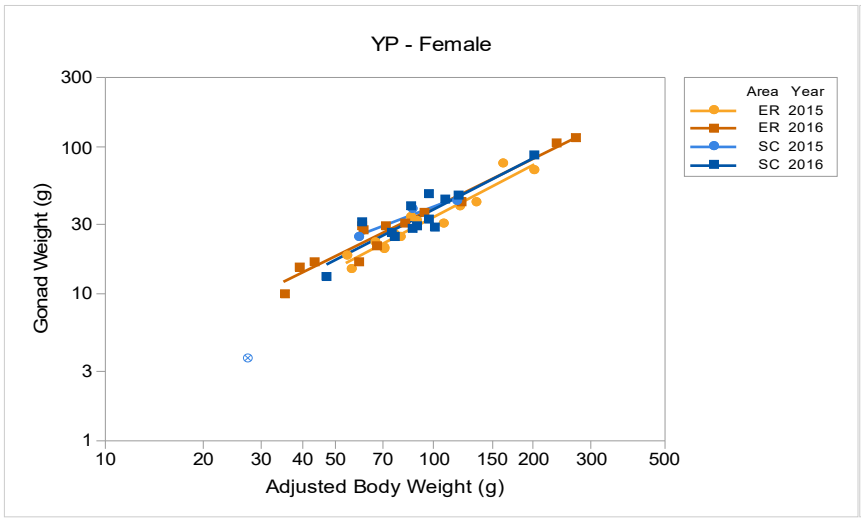
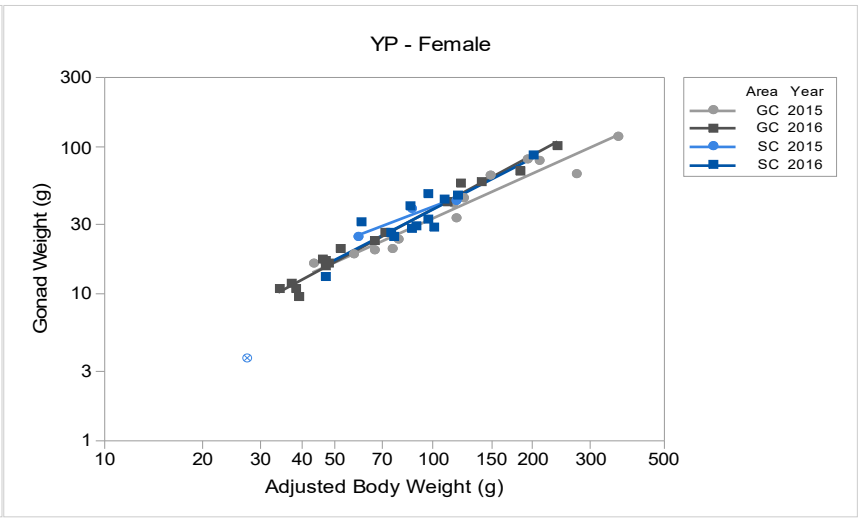
Notes:

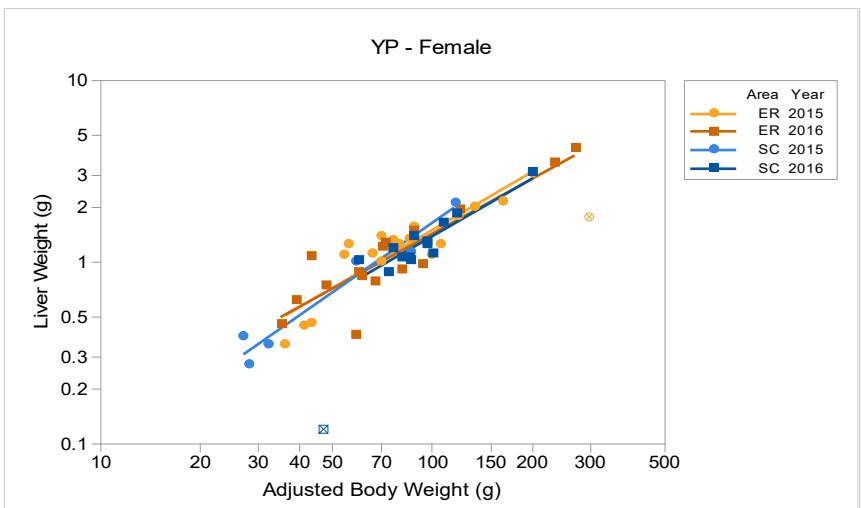
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

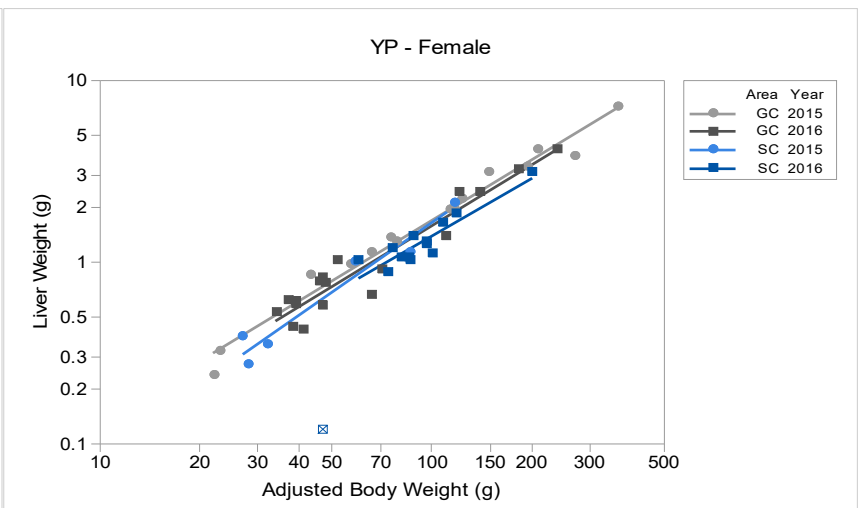
Weight-at-age and Length-at-age were assessed statisiticall as the weight and length of age-3 fish

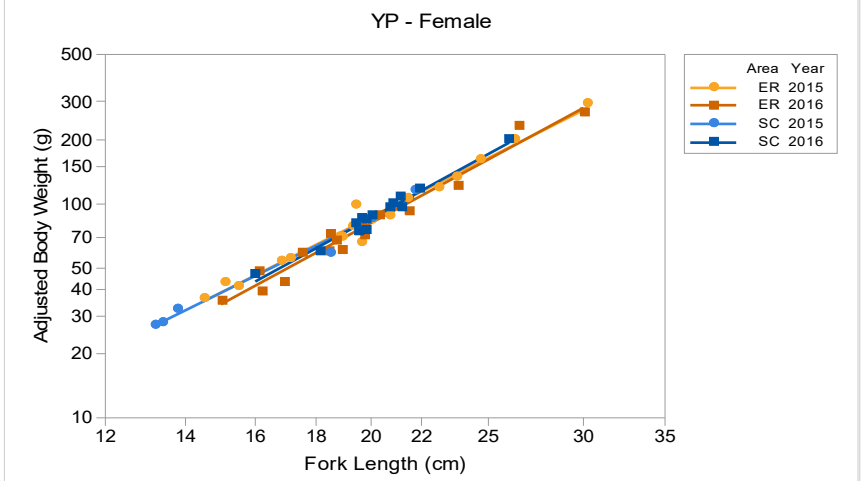
Boxplots: The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25 th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a square symbol.

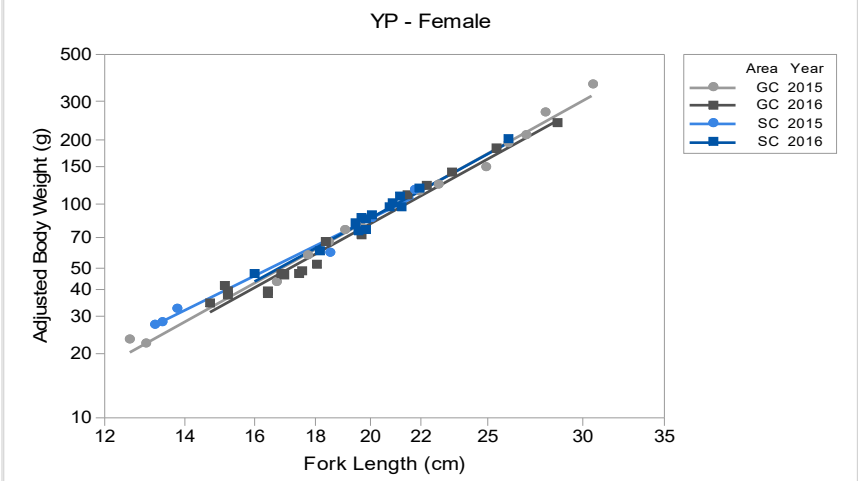


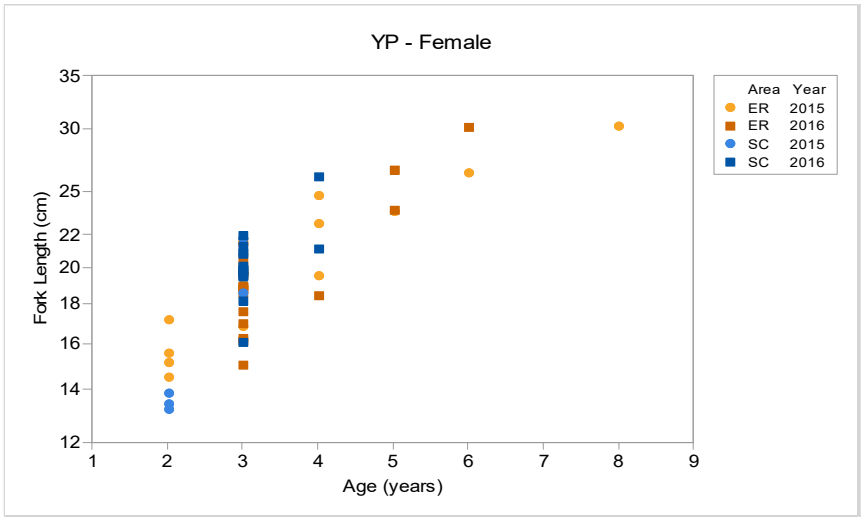


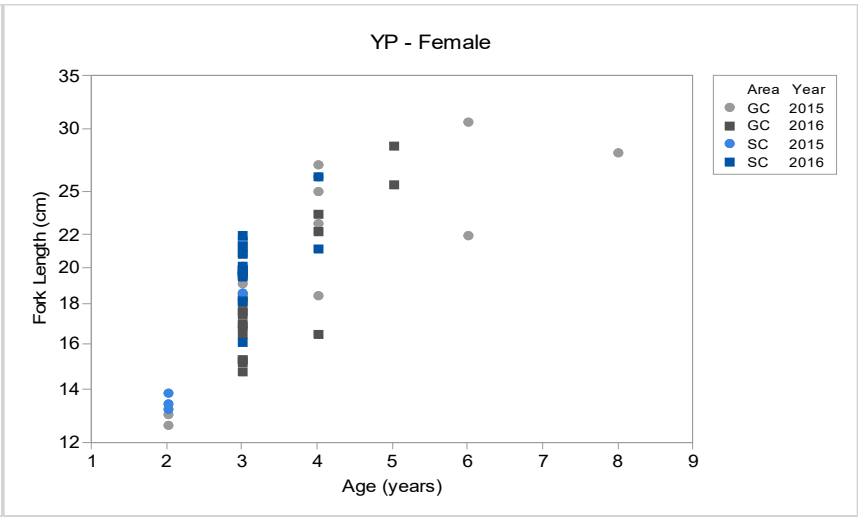


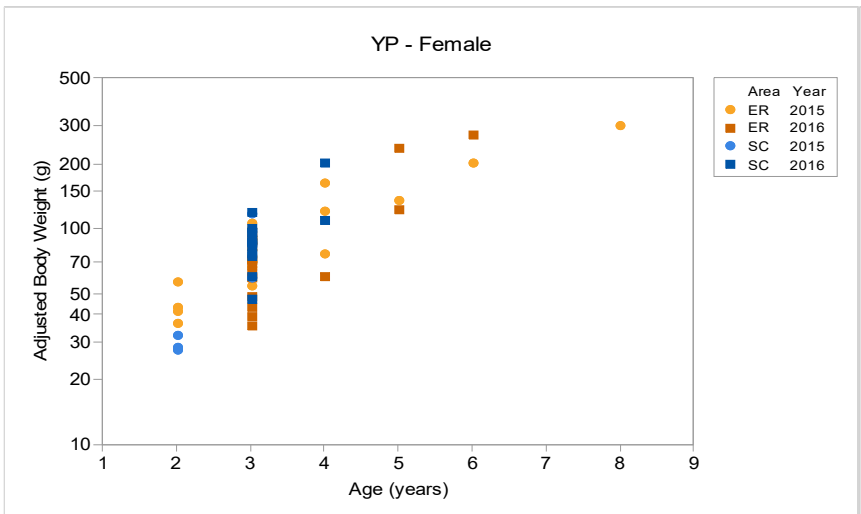












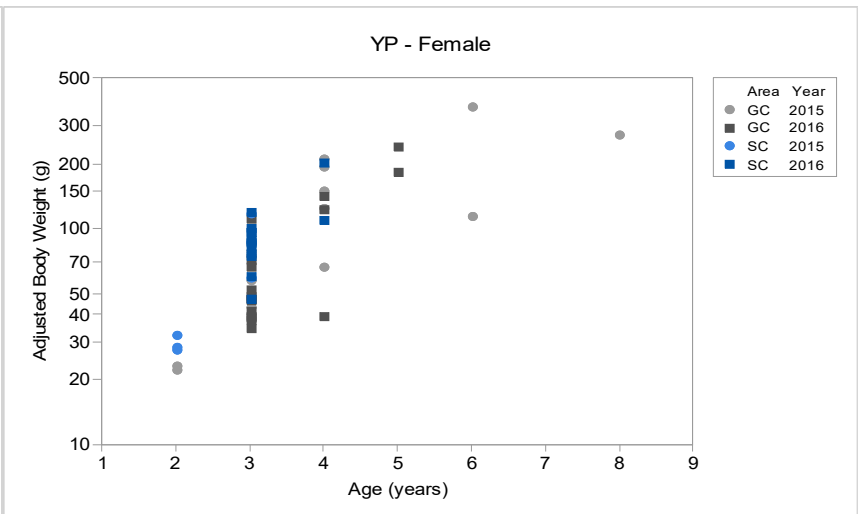


Figure F.9: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2015 and 2016 for Female Yellow Perch (YP)

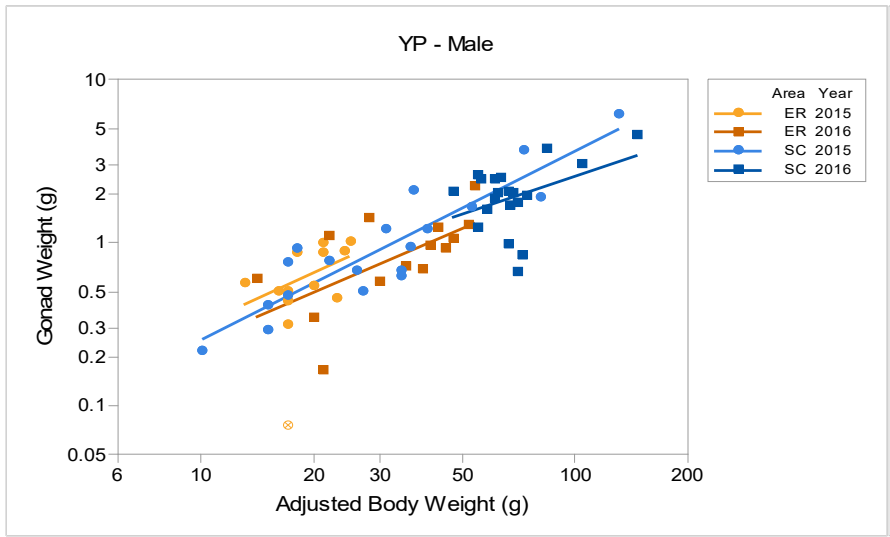
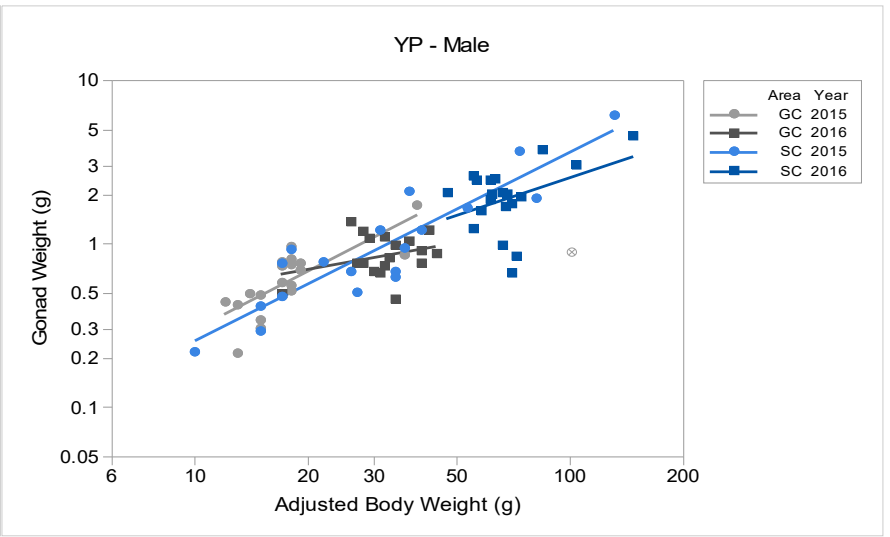
Notes:

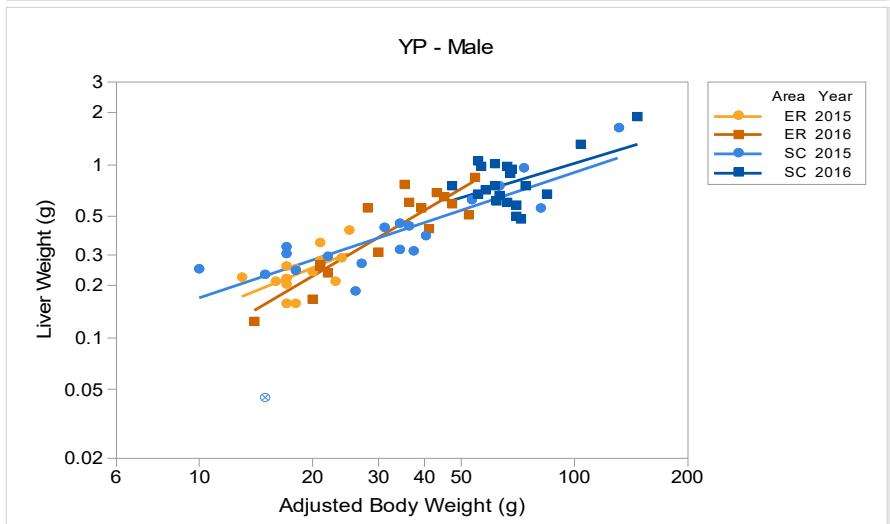
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

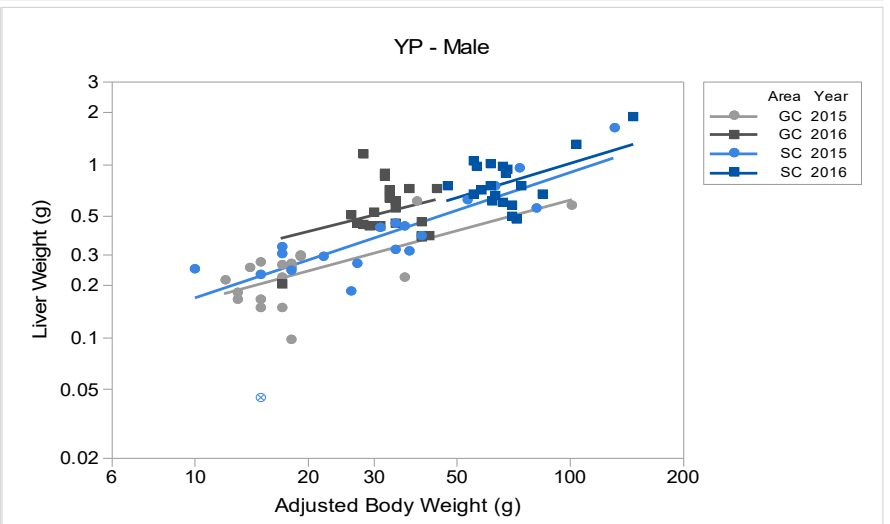
Fish with worms were excluded from the gonad weight comparisons

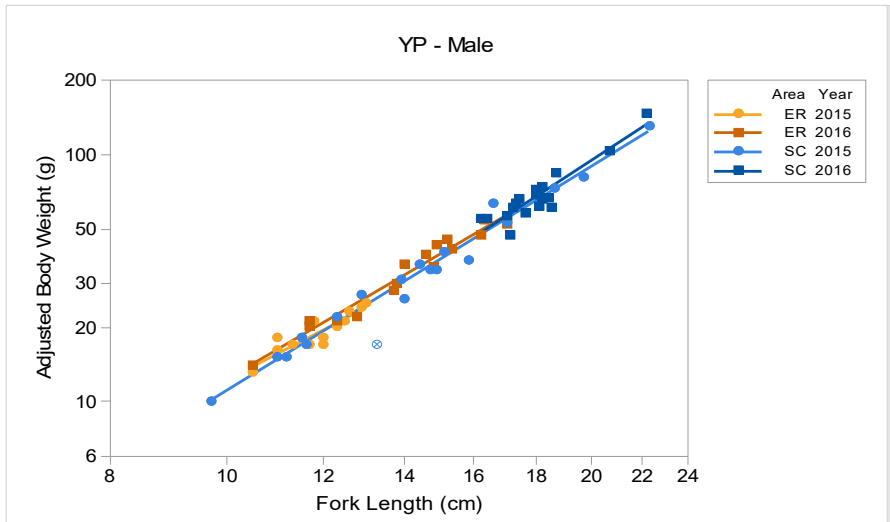
Statistical analyses were not conducted for weight-at-age and length-at-age due to a limited range of ages observed and little overlap in ages between years

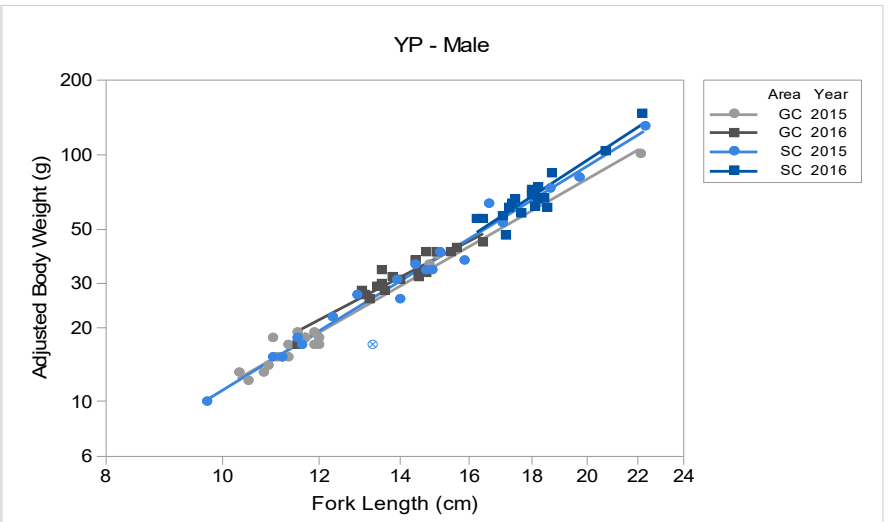


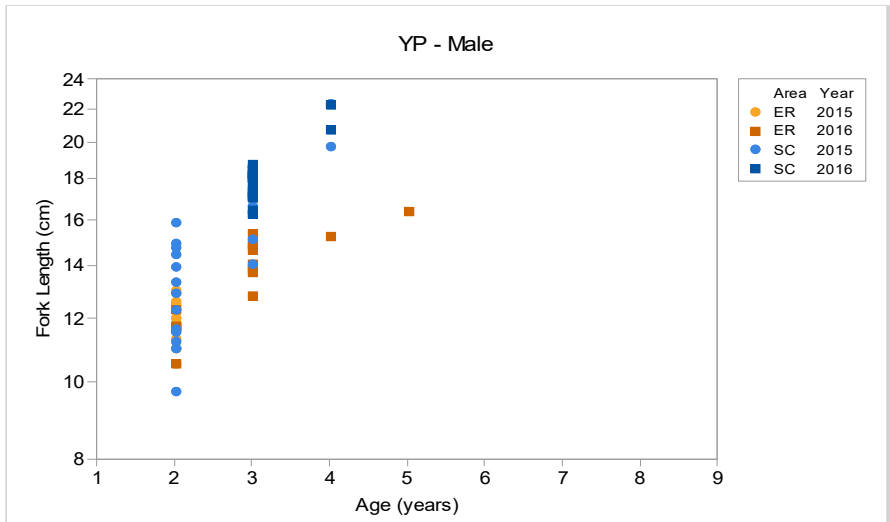


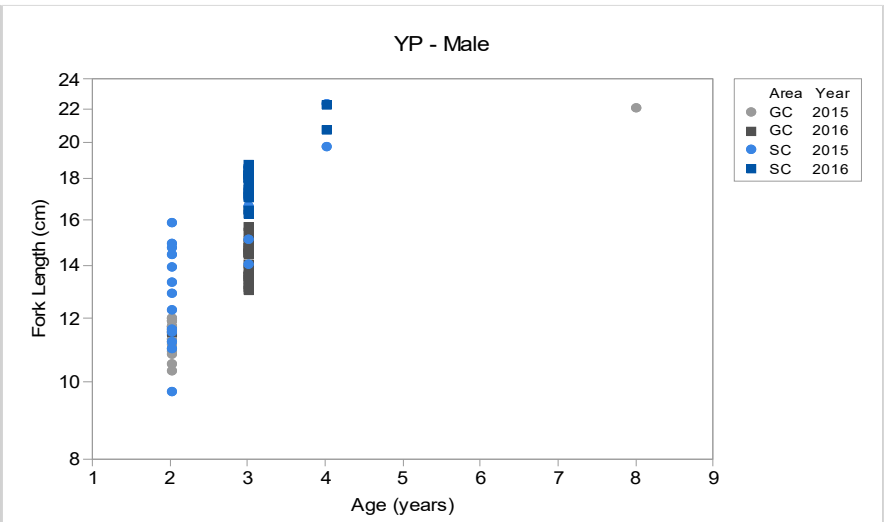


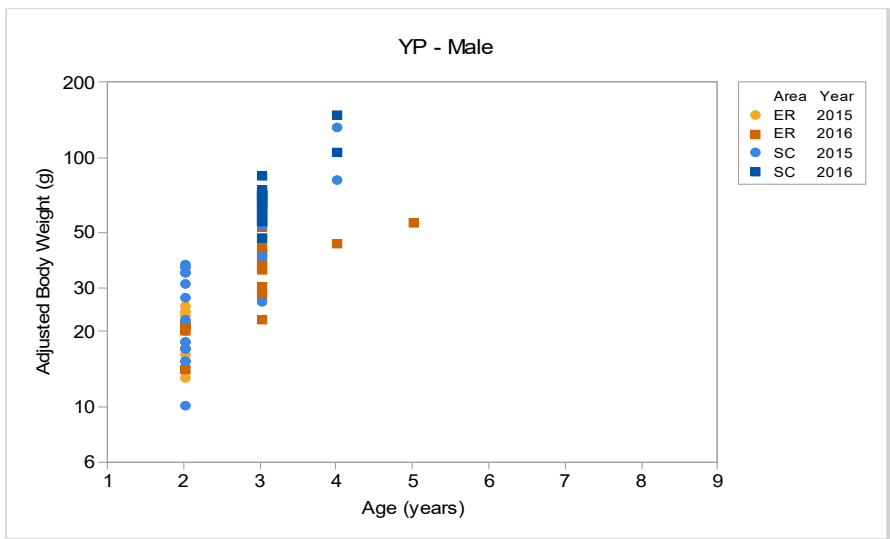












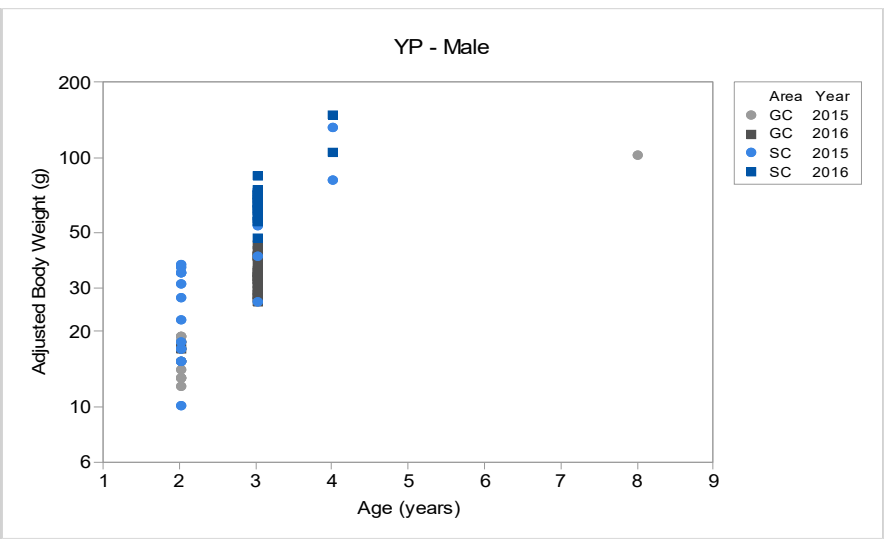


Figure F.10: Scatterplots and Linear Regressions for Fish Morphometric Endpoints at the Downstream Areas (ER = Elk River and GC = Gold Creek) Compared to the Upstream Area (SC = Sand Creek) in Koocanusa Reservoir Based on Data Collected in 2015 and 2016 for Male Yellow Perch (YP)

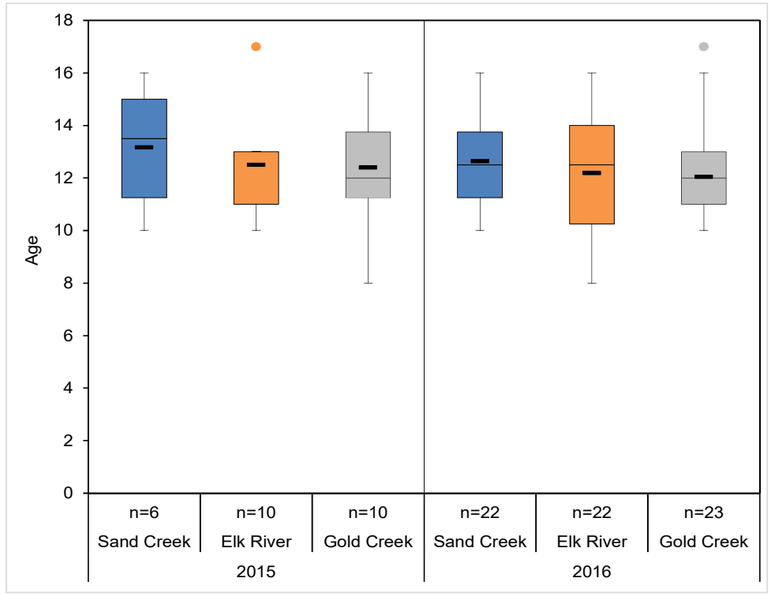
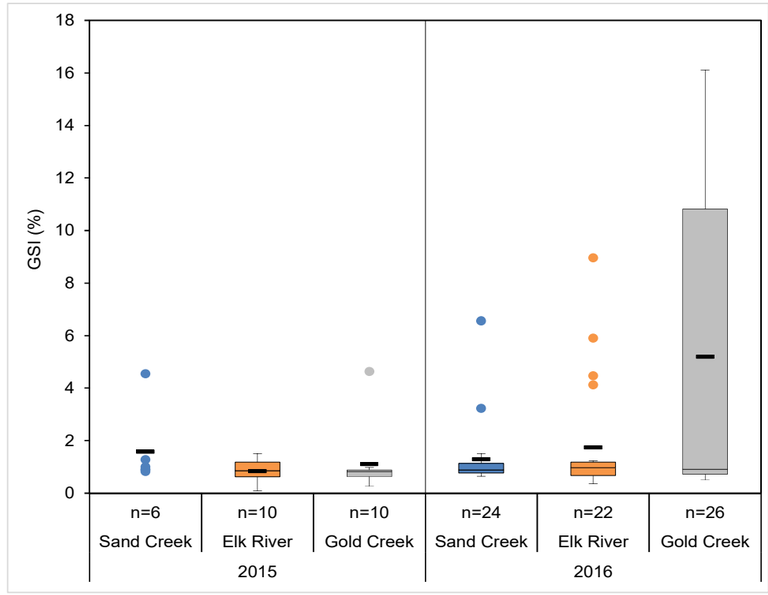
Notes:

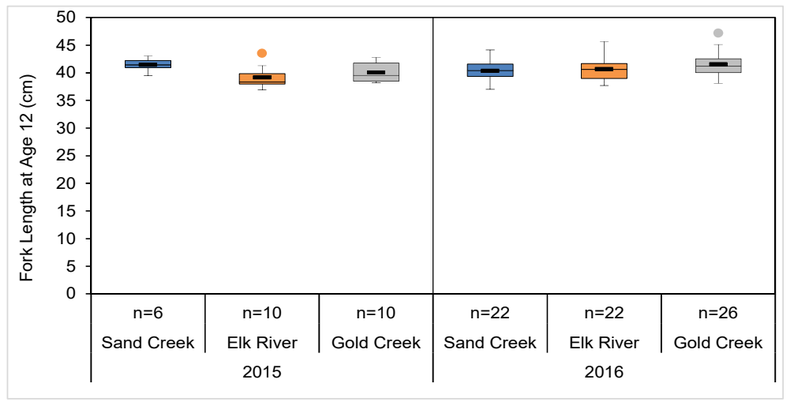
Outliers (Studentized residuals with magnitude > 4) and influential observations that were excluded from the statistical comparisons are plotted with open symbols with an × through them.

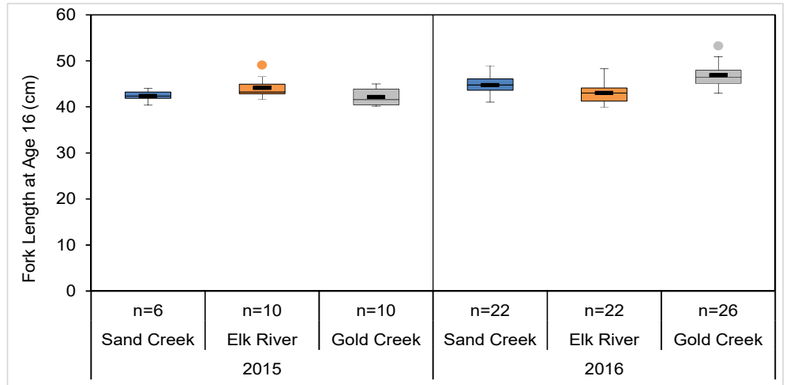
Fish with worms were excluded from the gonad weight comparisons

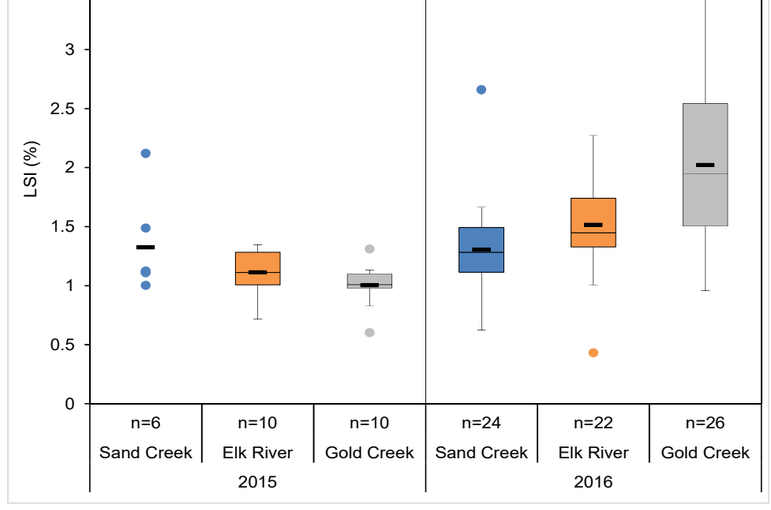
Statistical analyses were not conducted for weight-at-age and length-at-age due to a limited range of ages observed and little overlap in ages between years











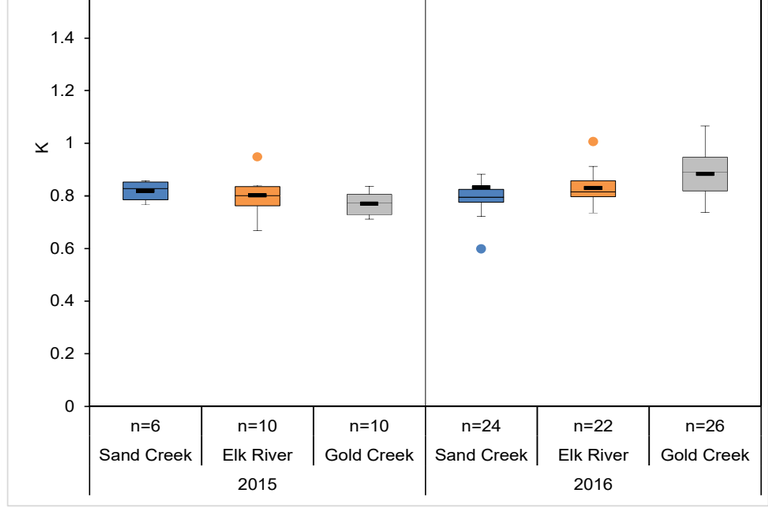


Figure F.11: Age (years), GSI (%), LSI (%), K, and Fork Length (cm)-at-Age (12 and 16 Years) for Female Largescale Sucker Collected in Koocanusa Reservoir, 2015 to 2016

Note: GSI - Gonadosomatic Index ([Gonad Weight / Adjusted Body Weight] x 100%); LSI - Liver Somatic Index ([Liver Weight / Adjusted Body Weight] x 100%); K - Condition Factor ([Adjusted Body Weight / (Total Length) ^{3}] x 100). Sand Creek study area is upstream of the Elk River confluence, while the Elk River and Gold Creek study areas are downstream of the Elk River. The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a dash.

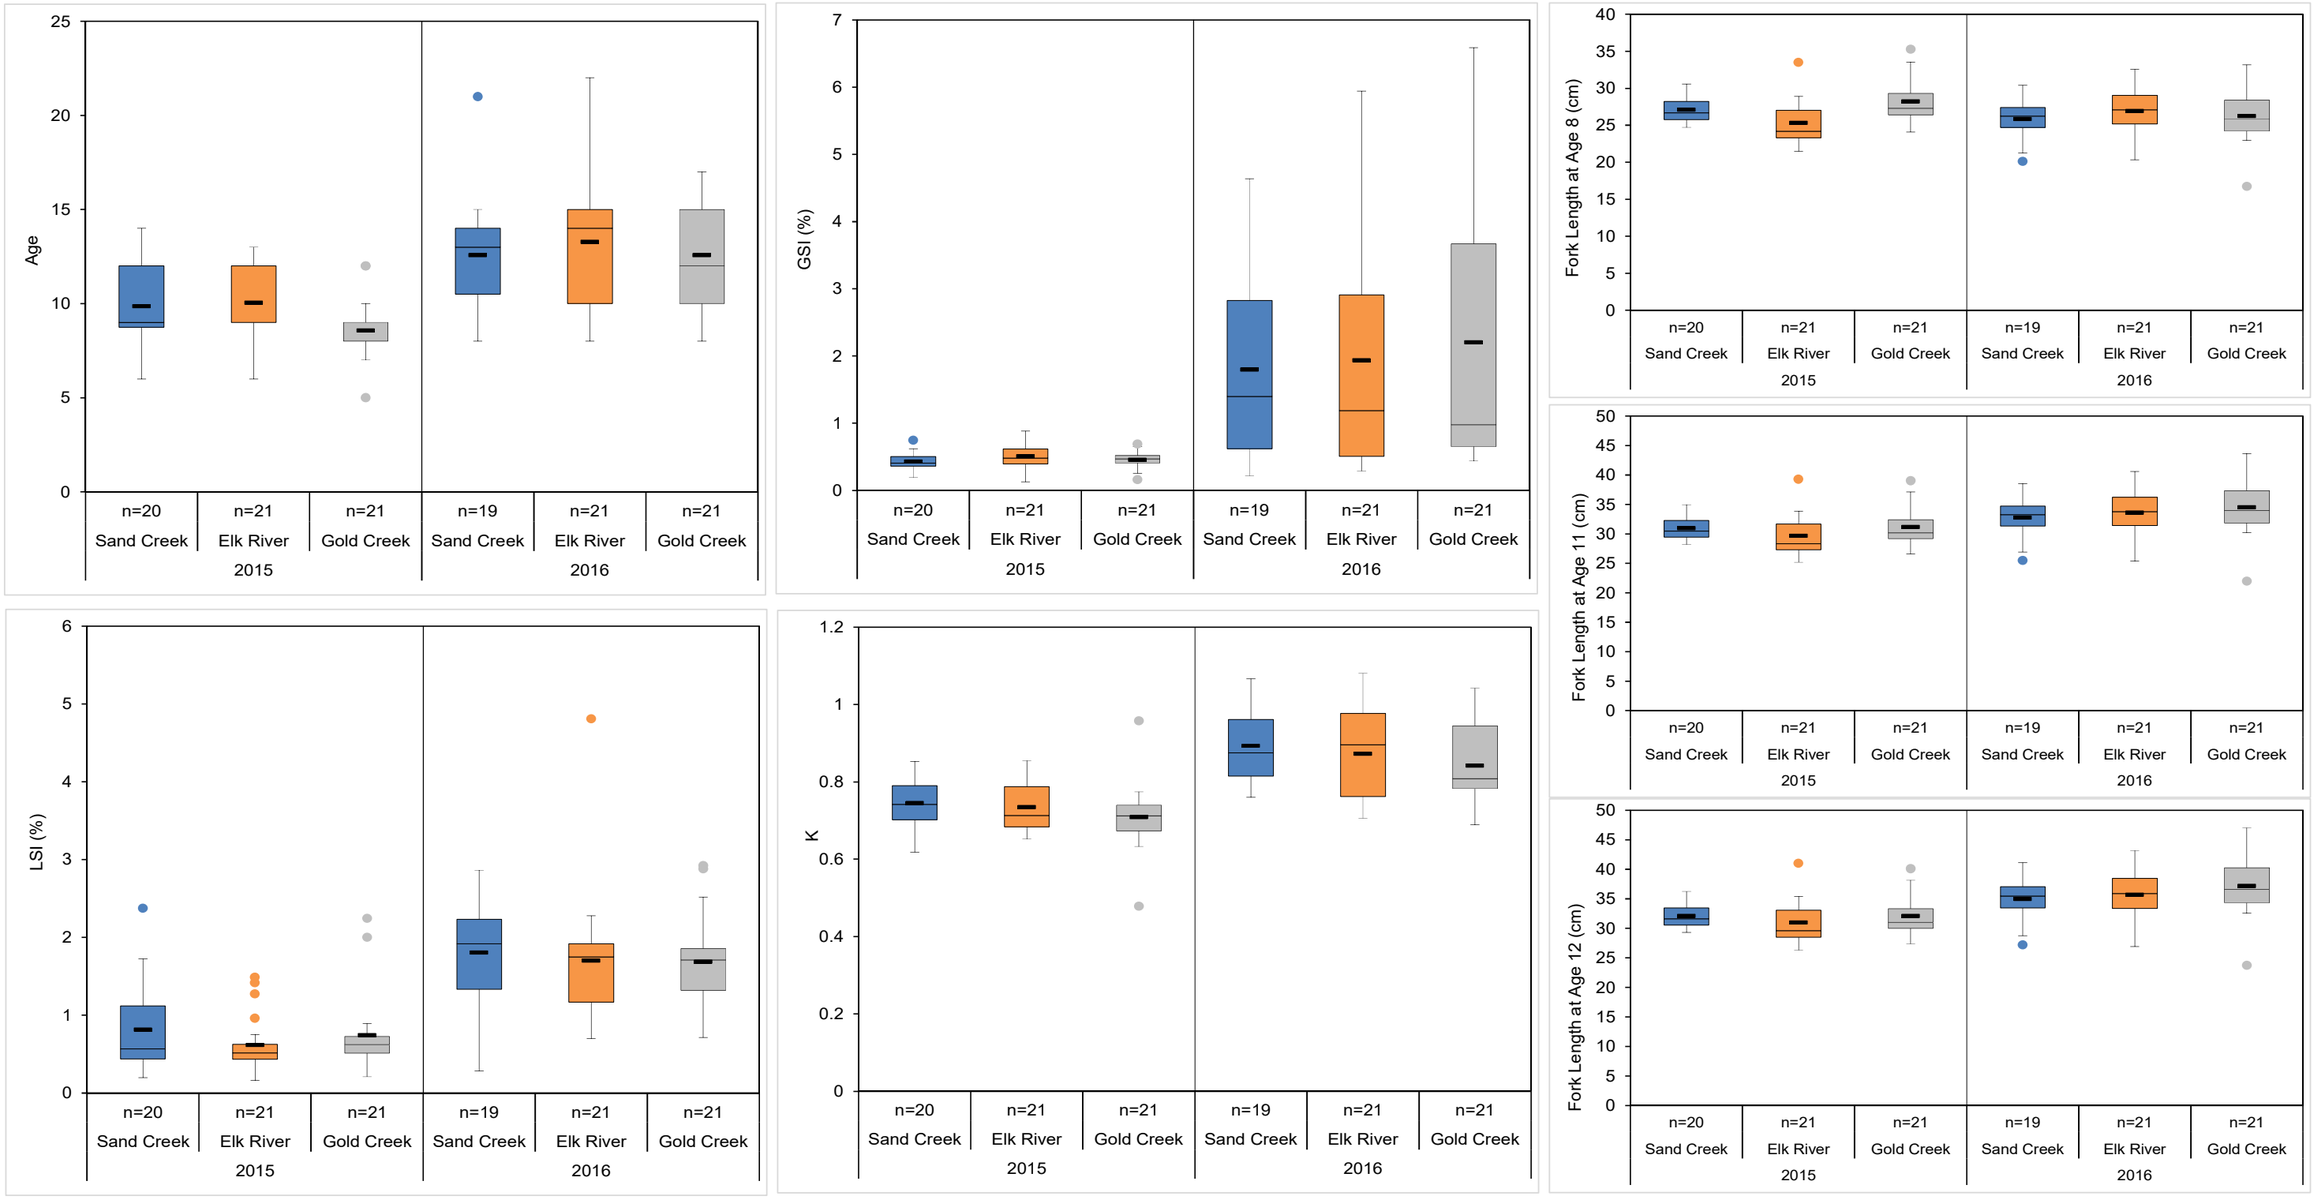

Figure F.12: Age (years), GSI (%), LSI (%), K, and Fork Length (cm)-at-Age (8, 11, and 12 Years) for Female Northern Pikeminnow Collected in Koocanusa Reservoir, 2015 to 2016

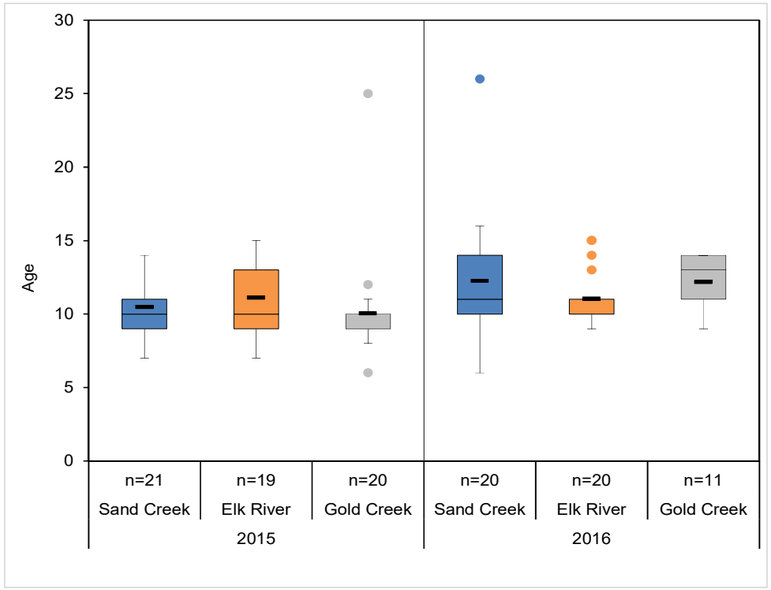
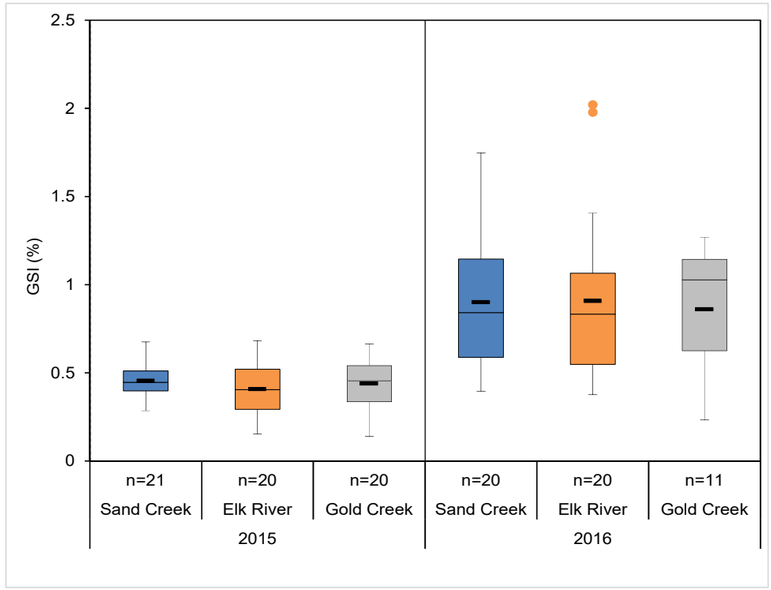
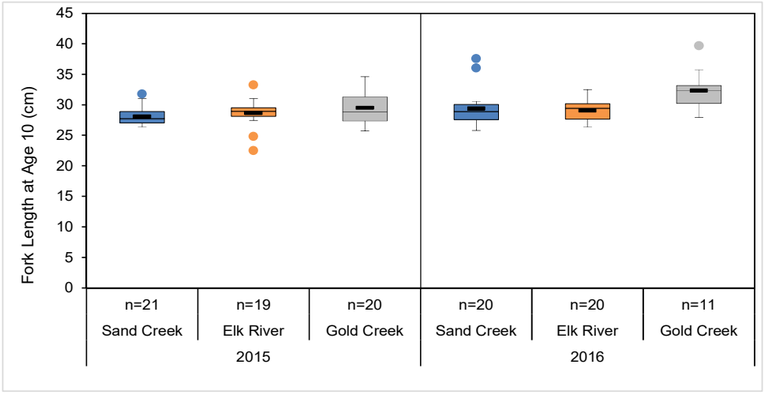
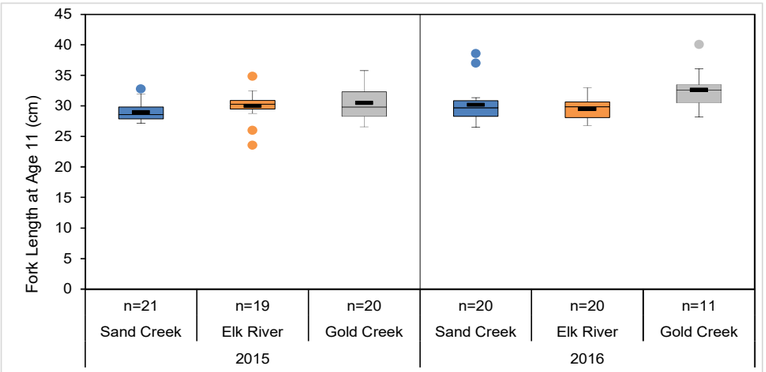
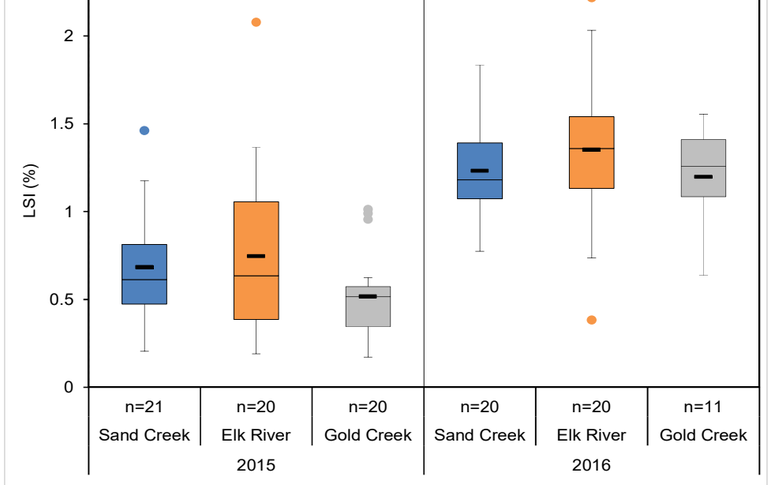
Note: GSI - Gonadosomatic Index ([Gonad Weight / Adjusted Body Weight] x 100%); LSI - Liver Somatic Index ([Liver Weight / Adjusted Body Weight] x 100%); K - Condition Factor ([Adjusted Body Weight / (Total Length) ^{3}] x 100). Sand Creek study area is upstream of the Elk River confluence, while the Elk River and Gold Creek study areas are downstream of the Elk River. The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a dash.

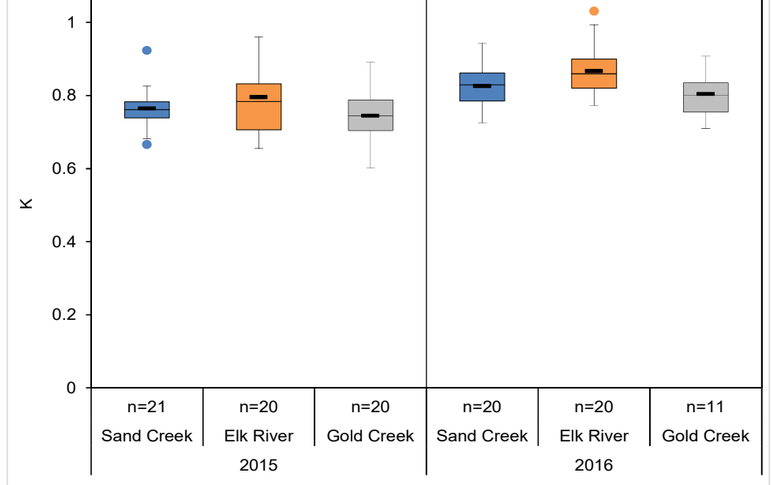












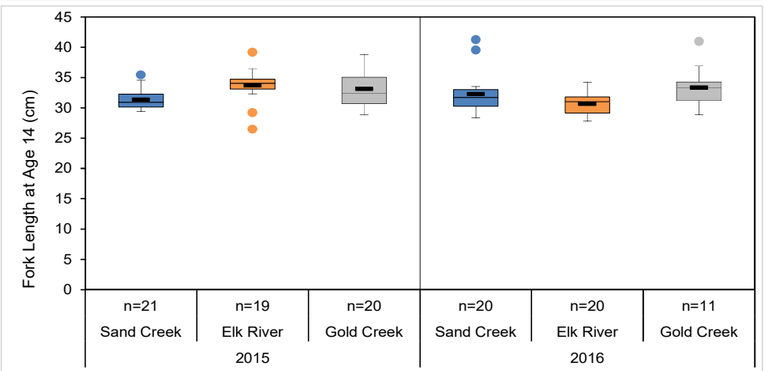


Figure F.13: Age (years), GSI (%), LSI (%), K, and Fork Length (cm)-at-Age (10, 11, and 14 Years) for Male Northern Pikeminnow Collected in Koocanusa Reservoir, 2015 to 2016

Note: GSI - Gonadosomatic Index ([Gonad Weight / Adjusted Body Weight] x 100%); LSI - Liver Somatic Index ([Liver Weight / Adjusted Body Weight] x 100%); K - Condition Factor ([Adjusted Body Weight / (Total Length)^3] x 100). Sand Creek study area is upstream of the Elk River confluence, while the Elk River and Gold Creek study areas are downstream of the Elk River. The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a dash.

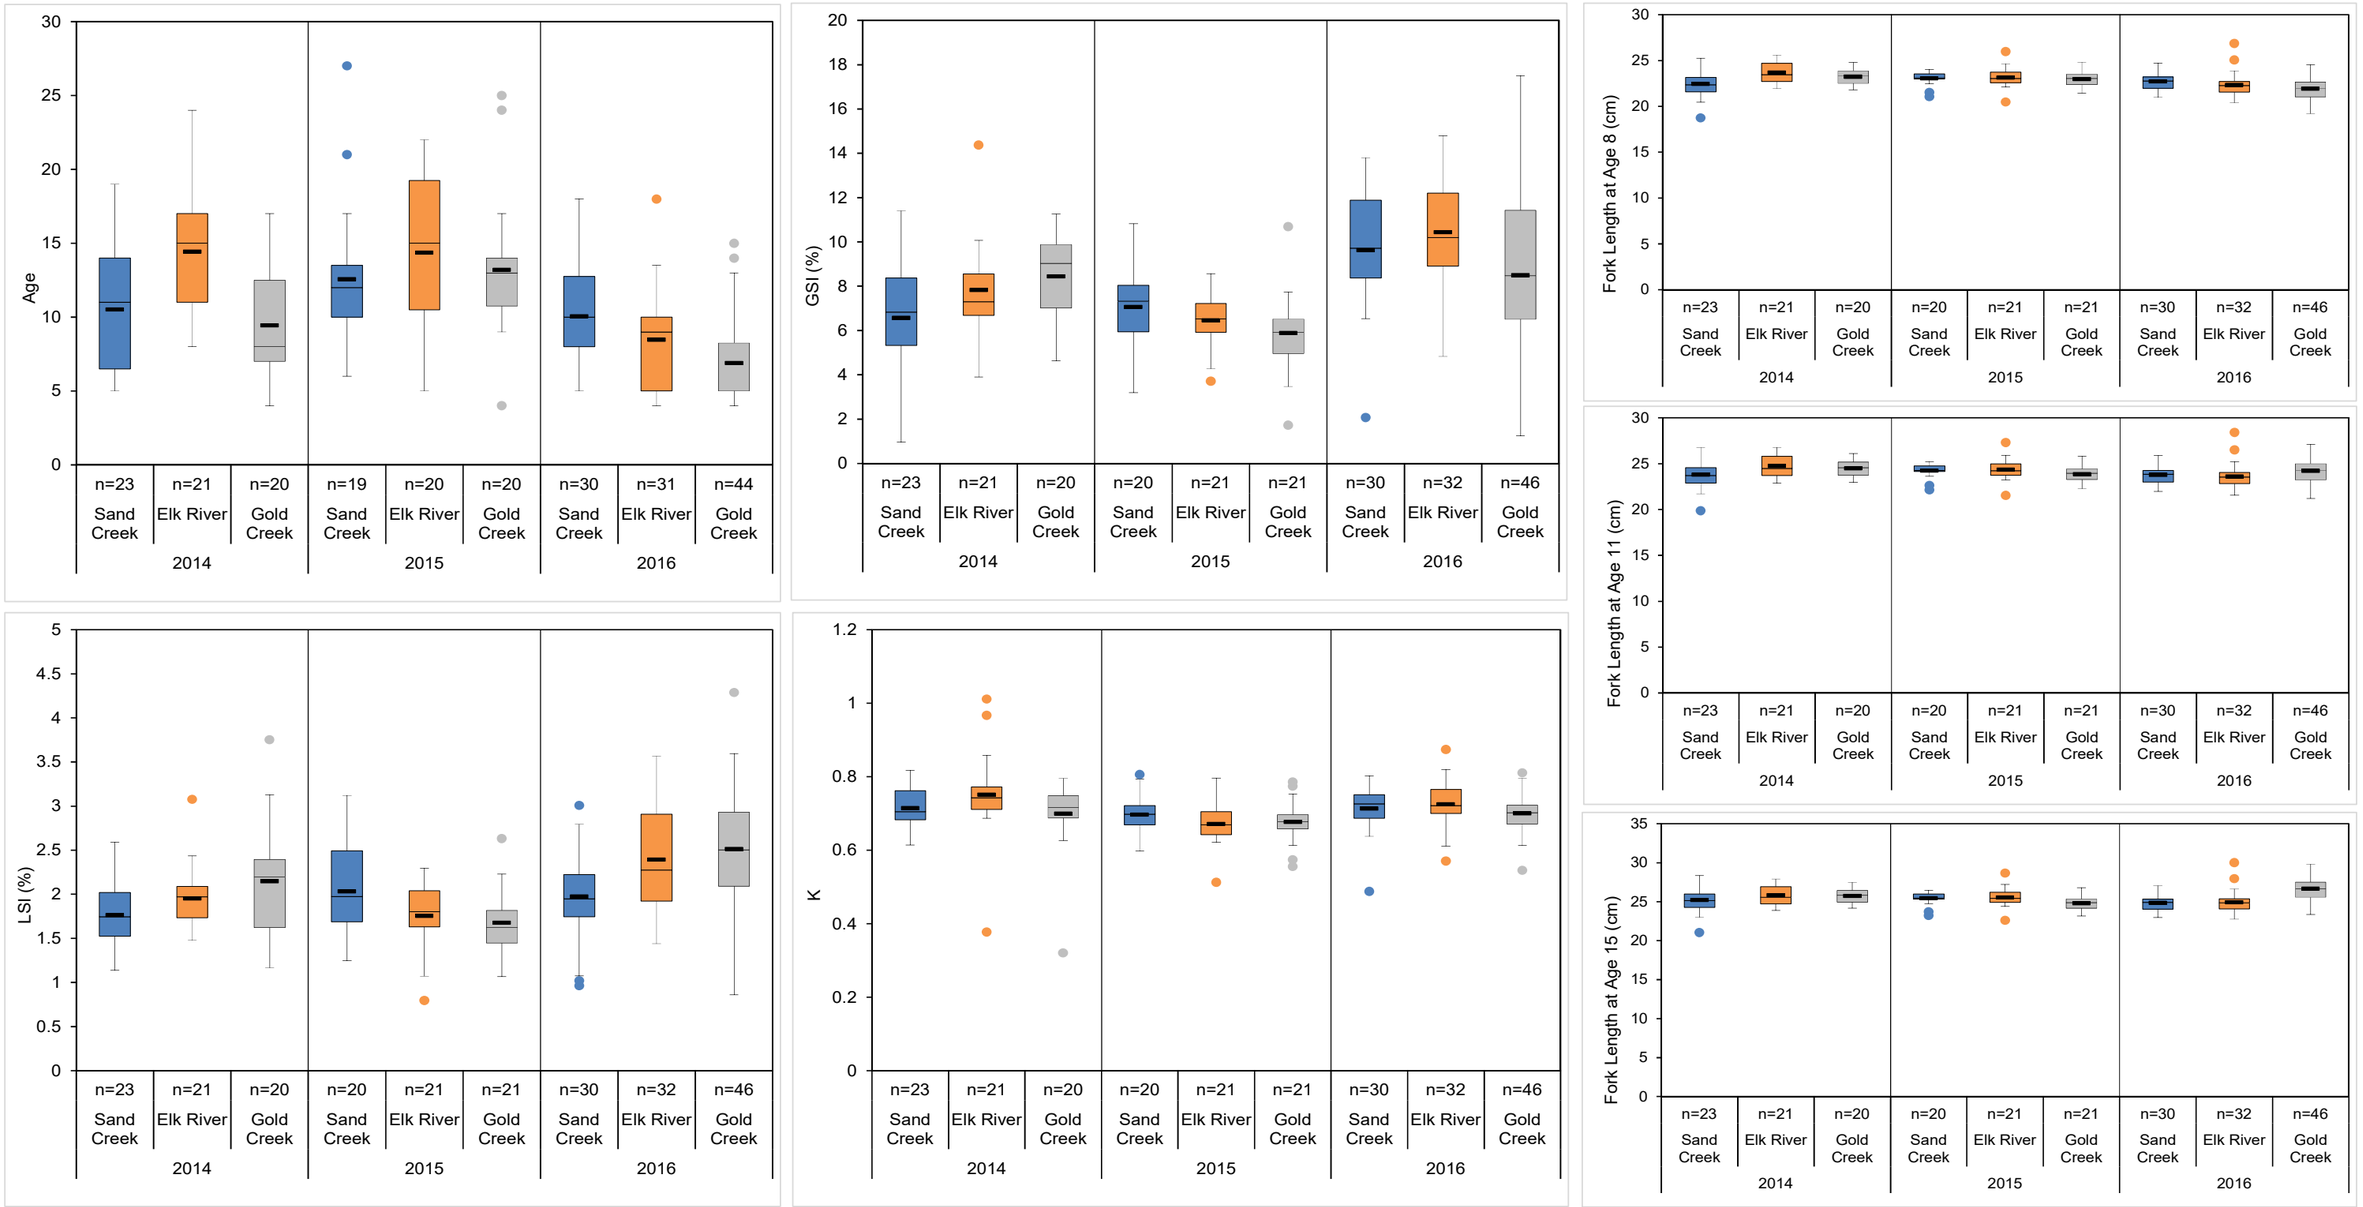

Figure F.14: Age (years), GSI (%), LSI (%), K, and Fork Length (cm)-at-Age (8, 11, and 15 Years) for Female Peamouth Chub Collected in Koocanusa Reservoir, 2014 to 2016

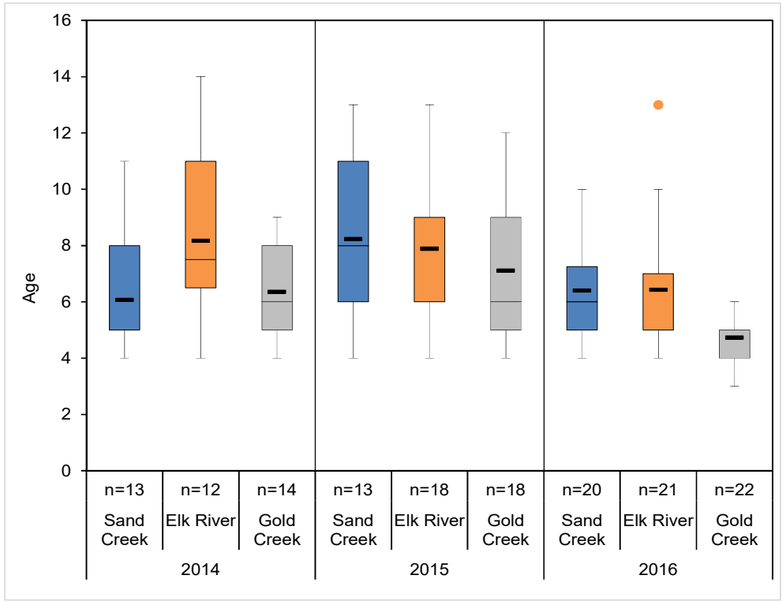
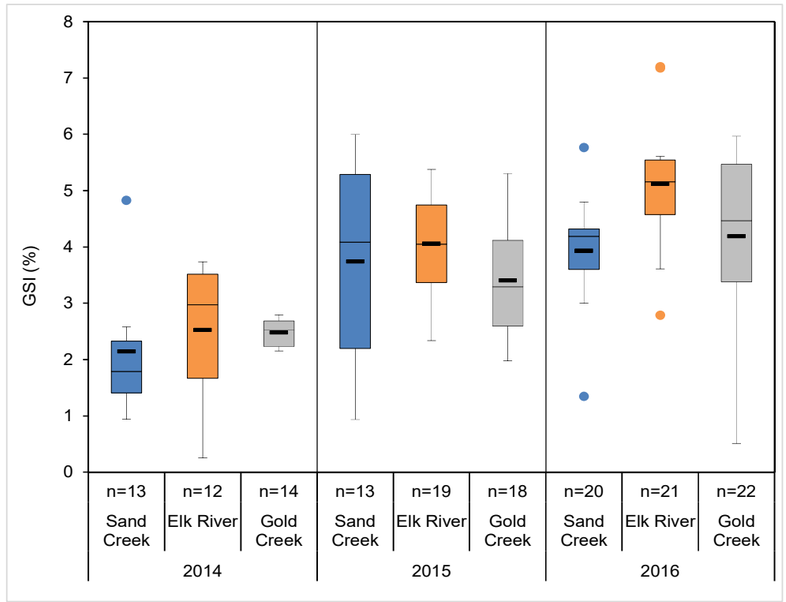
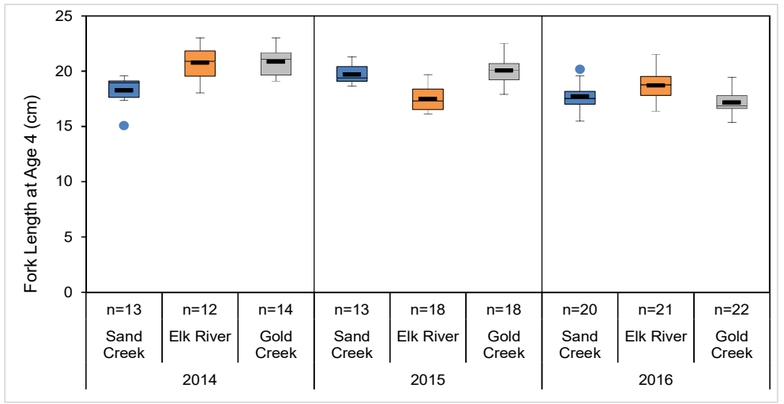
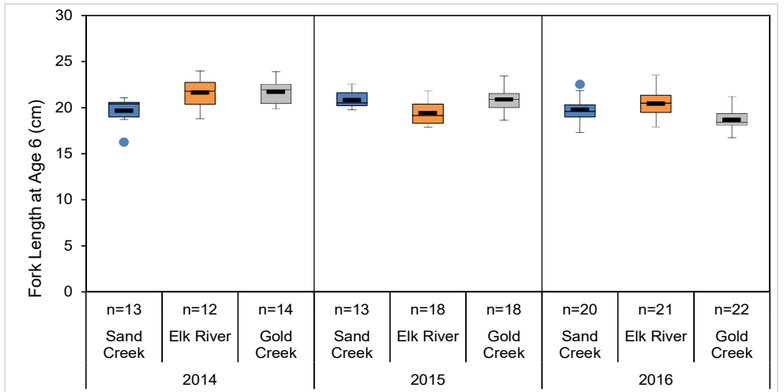
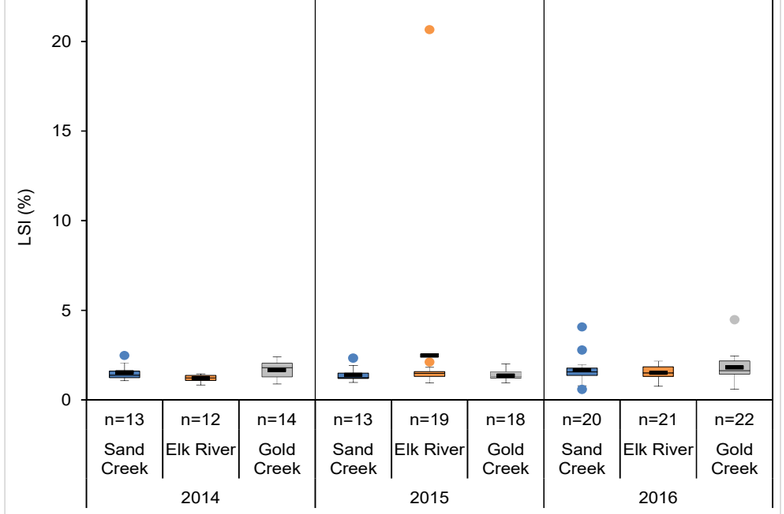
Note: GSI - Gonadosomatic Index ([Gonad Weight / Adjusted Body Weight] x 100%); LSI - Liver Somatic Index ([Liver Weight / Adjusted Body Weight] x 100%); K - Condition Factor ([Adjusted Body Weight / (Total Length) ^{3}] x 100). Sand Creek study area is upstream of the Elk River confluence, while the Elk River and Gold Creek study areas are downstream of the Elk River. The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a dash.

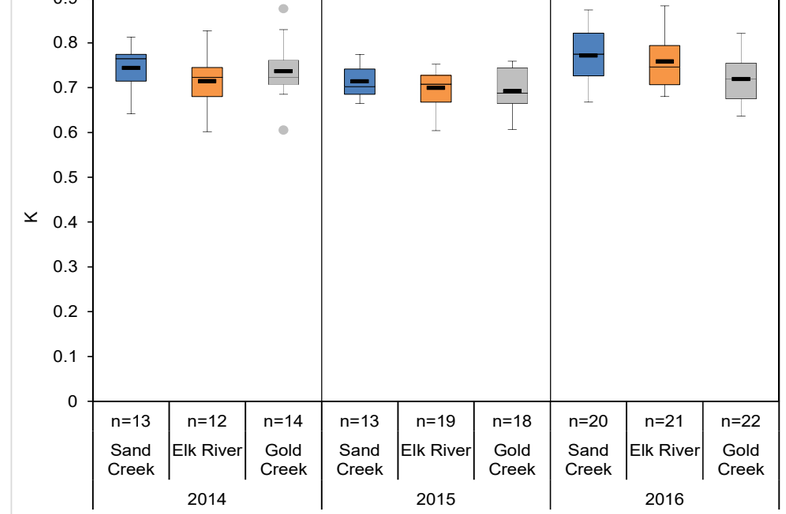












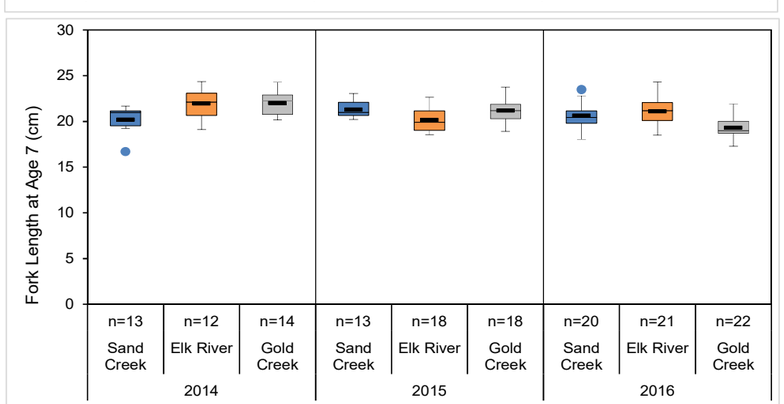


Figure F.15: Age (years), GSI (%), LSI (%), K, and Fork Length (cm)-at-Age (4, 6, and 7 Years) for Male Peamouth Chub Collected in Koocanusa Reservoir, 2014 to 2016

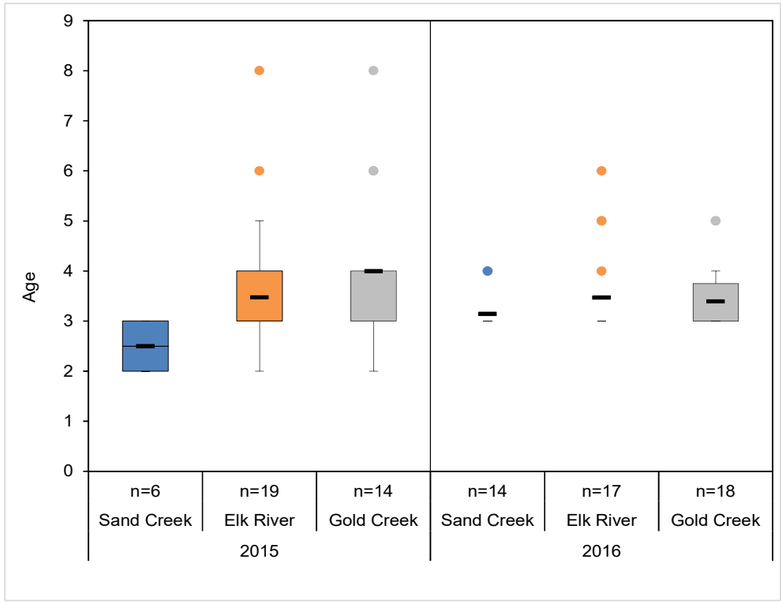
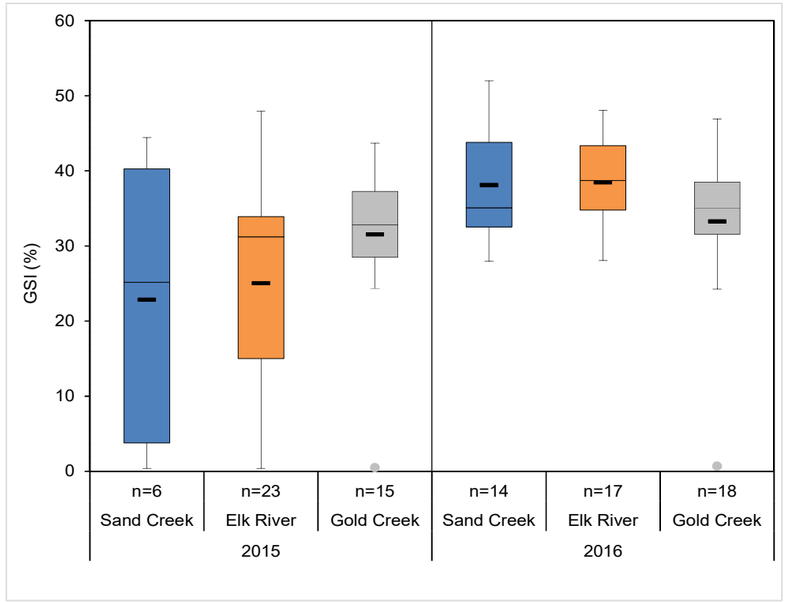
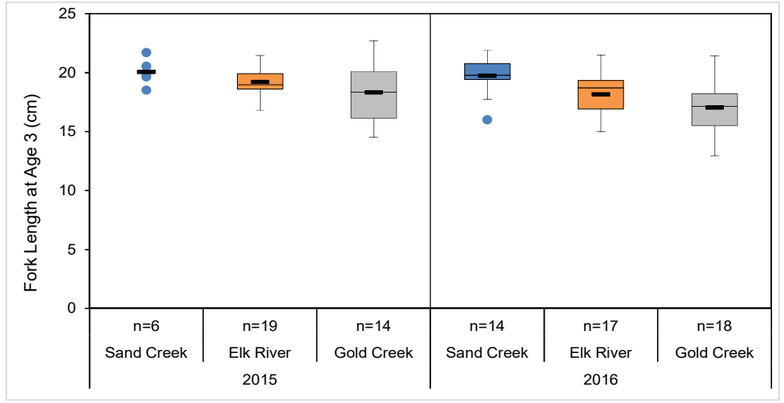
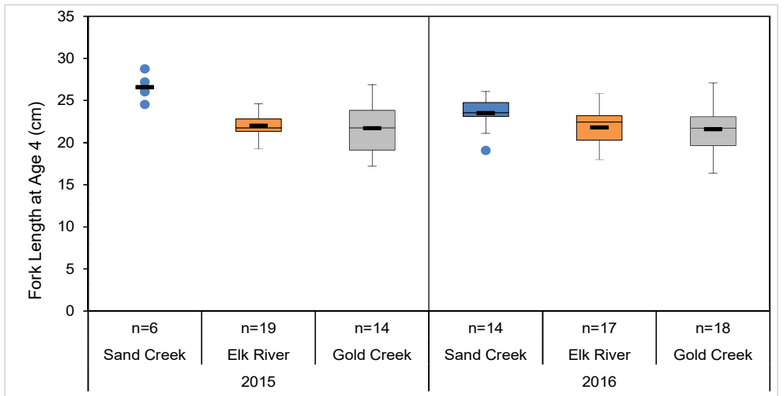
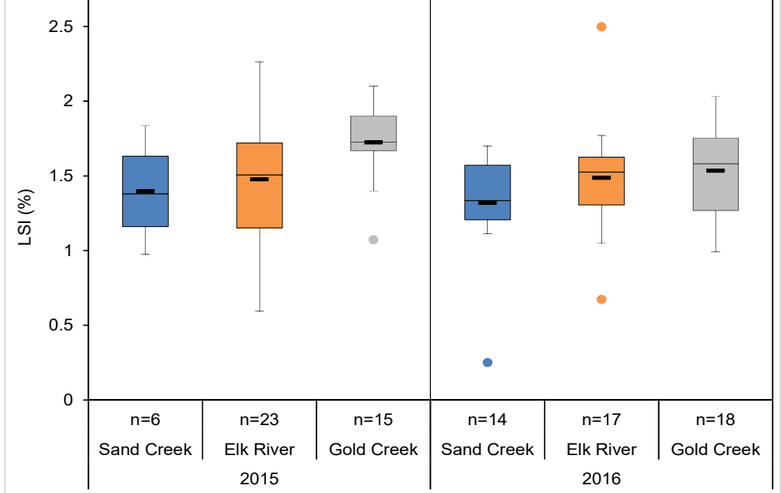
Note: GSI - Gonadosomatic Index ([Gonad Weight / Adjusted Body Weight] x 100%); LSI - Liver Somatic Index ([Liver Weight / Adjusted Body Weight] x 100%); K - Condition Factor ([Adjusted Body Weight / (Total Length) ^{3}] x 100). Sand Creek study area is upstream of the Elk River confluence, while the Elk River and Gold Creek study areas are downstream of the Elk River. The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a dash.











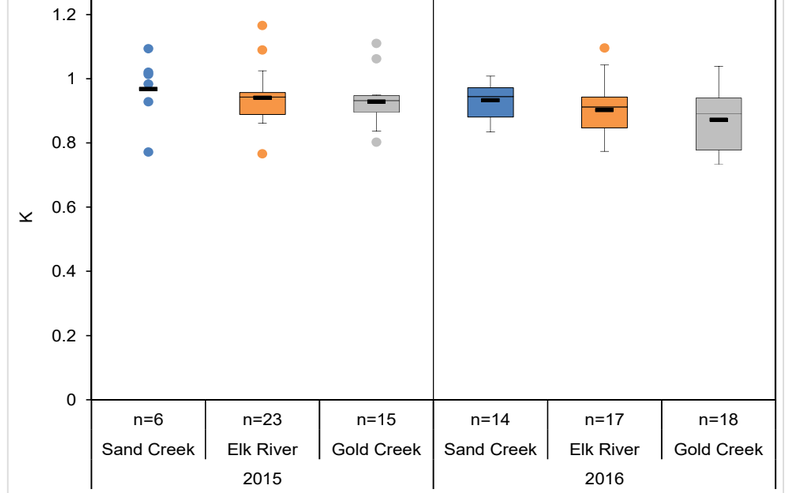


Figure F.16: Age (years), GSI (%), LSI (%), K, and Fork Length (cm)-at-Age (3 and 4 Years) for Female Yellow Perch Collected in Koocanusa Reservoir, 2015 to 2016

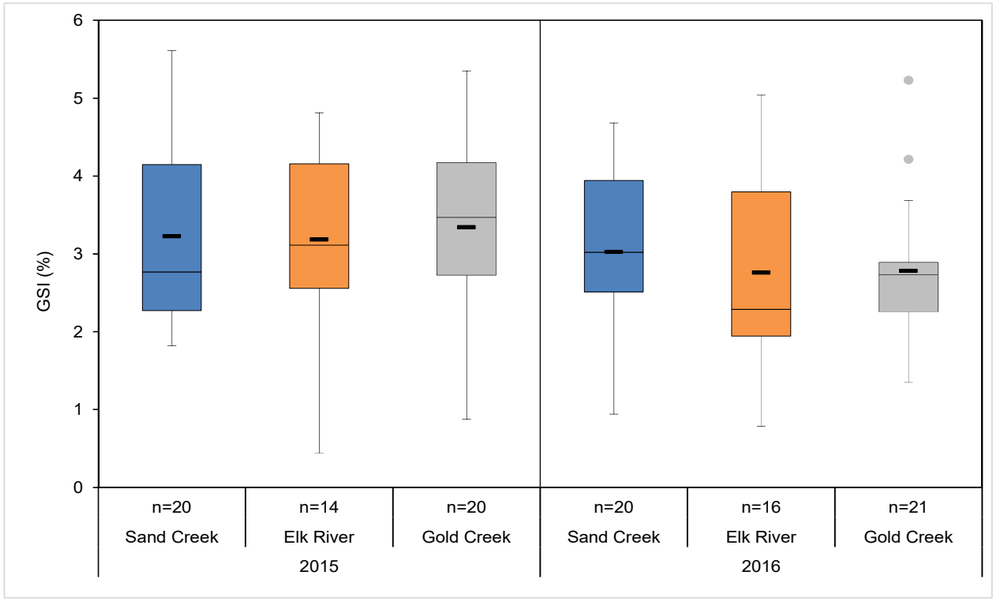
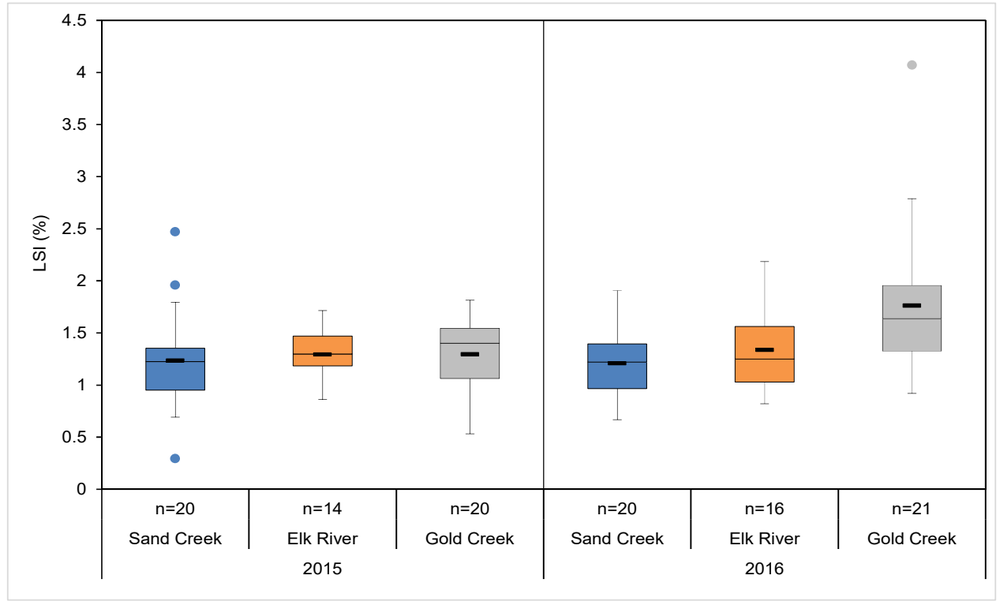
Note: GSI - Gonadosomatic Index ([Gonad Weight / Adjusted Body Weight] x 100%); LSI - Liver Somatic Index ([Liver Weight / Adjusted Body Weight] x 100%); K - Condition Factor ([Adjusted Body Weight / (Total Length) ^{3}] x 100). Sand Creek study area is upstream of the Elk River confluence, while the Elk River and Gold Creek study areas are downstream of the Elk River. The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a dash.





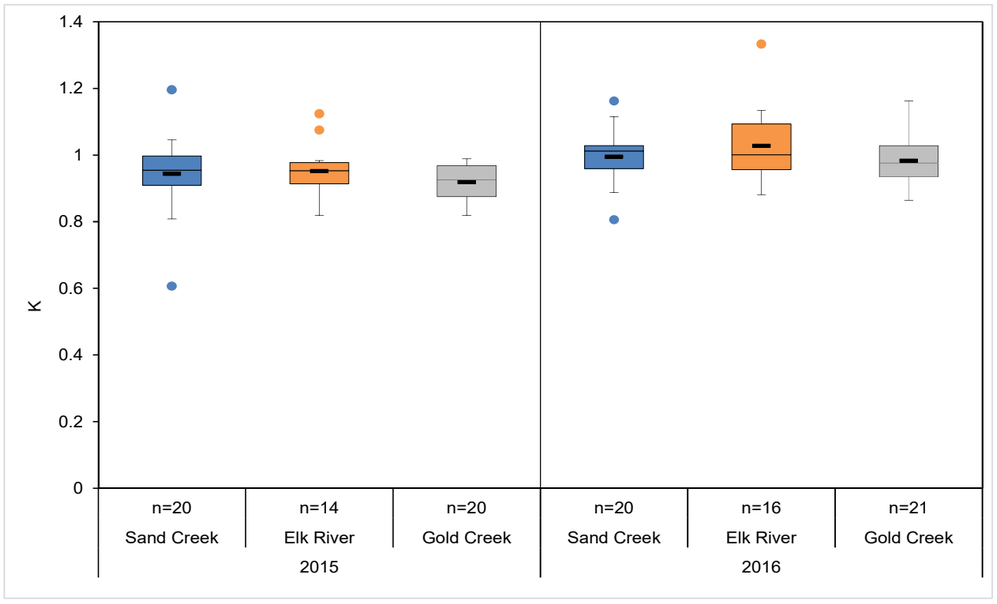


Figure F.17: Age (years), GSI (%), LSI (%), and K for Male Yellow Perch Collected in Koocanusa Reservoir, 2015 to 2016

Note: GSI - Gonadosomatic Index ([Gonad Weight / Adjusted Body Weight] x 100%); LSI - Liver Somatic Index ([Liver Weight / Adjusted Body Weight] x 100%); K - Condition Factor ([Adjusted Body Weight / (Total Length) ^{3}] x 100). Sand Creek study area is upstream of the Elk River confluence, while the Elk River and Gold Creek study areas are downstream of the Elk River. The box represents the 25th percentile, median, and 75th percentile and the whiskers represent the minimum and maximum values; however, values 1.5 times the height of the box beyond the 25th and 75th percentiles are plotted as individual values in which case the whisker is truncated to the next value in the data set. The mean is plotted as a dash.

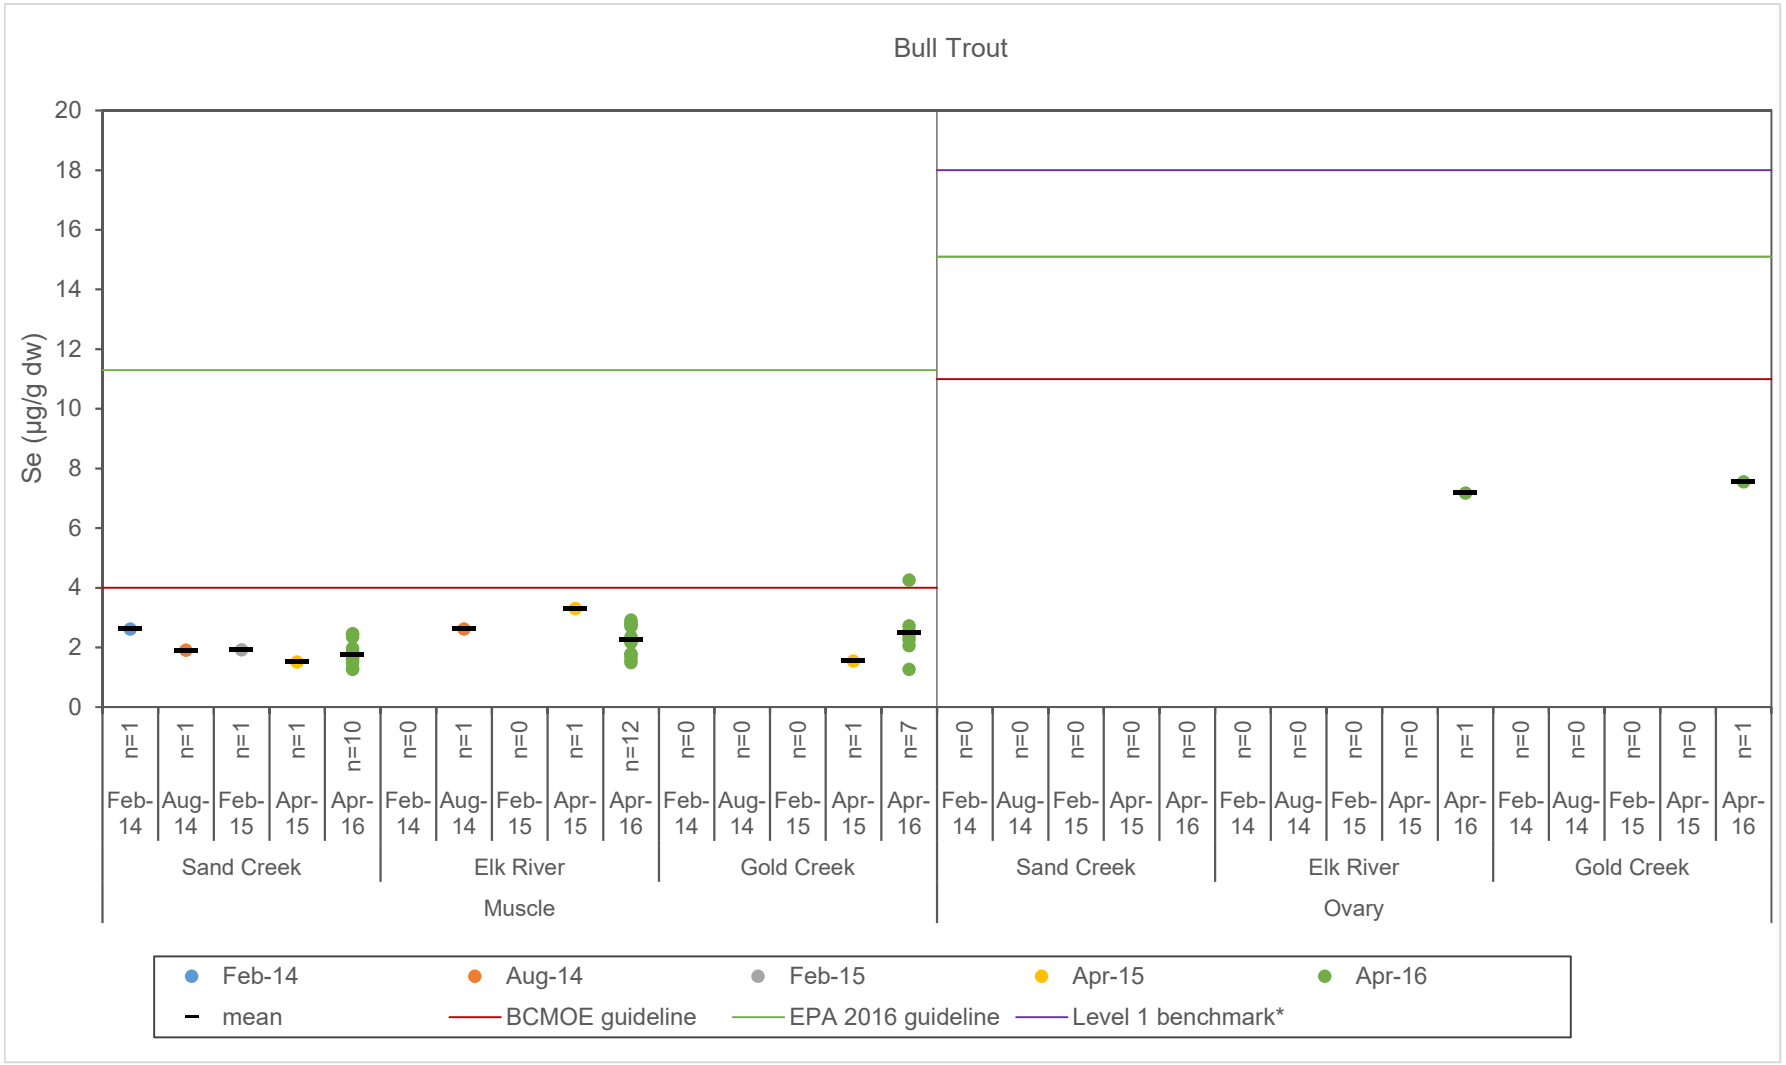

Figure F.18: Muscle and Ovary Tissue Selenium Concentrations (µg/g dw) in Bull Trout Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, February 2014, 2015, April 2015, 2016, and August 2014

Notes: * Level 1 benchmark for effects to fish reproduction (Teck 2014). Bull trout collected near Oestreich Road (OR-BT-01M-Feb-14) was added to the bull trout collected at Sand Creek

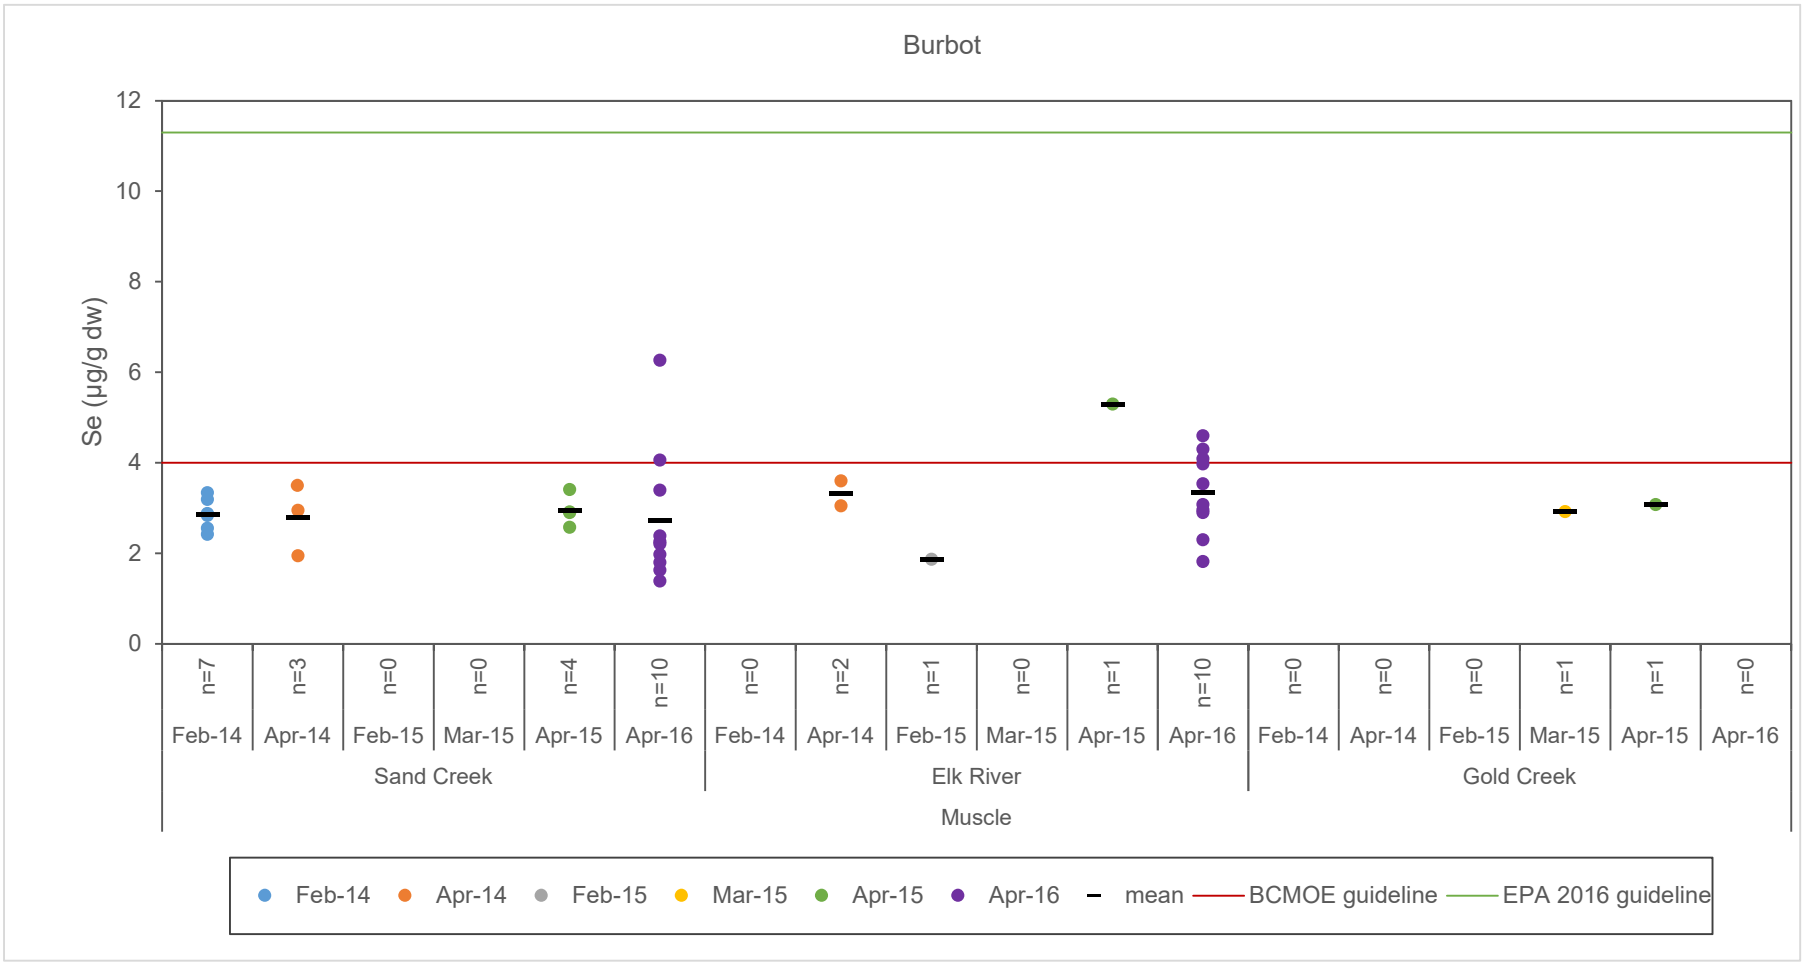

Figure F.19: Muscle Tissue Selenium Concentrations (µg/g dw) in Burbot Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, February 2014, 2015, March 2015, and April 2014, 2015, 2016

Note: Burbot collected near Oestreich Road (OR-BT-01M-Feb-14) was added to the burbot collected at Sand Creek

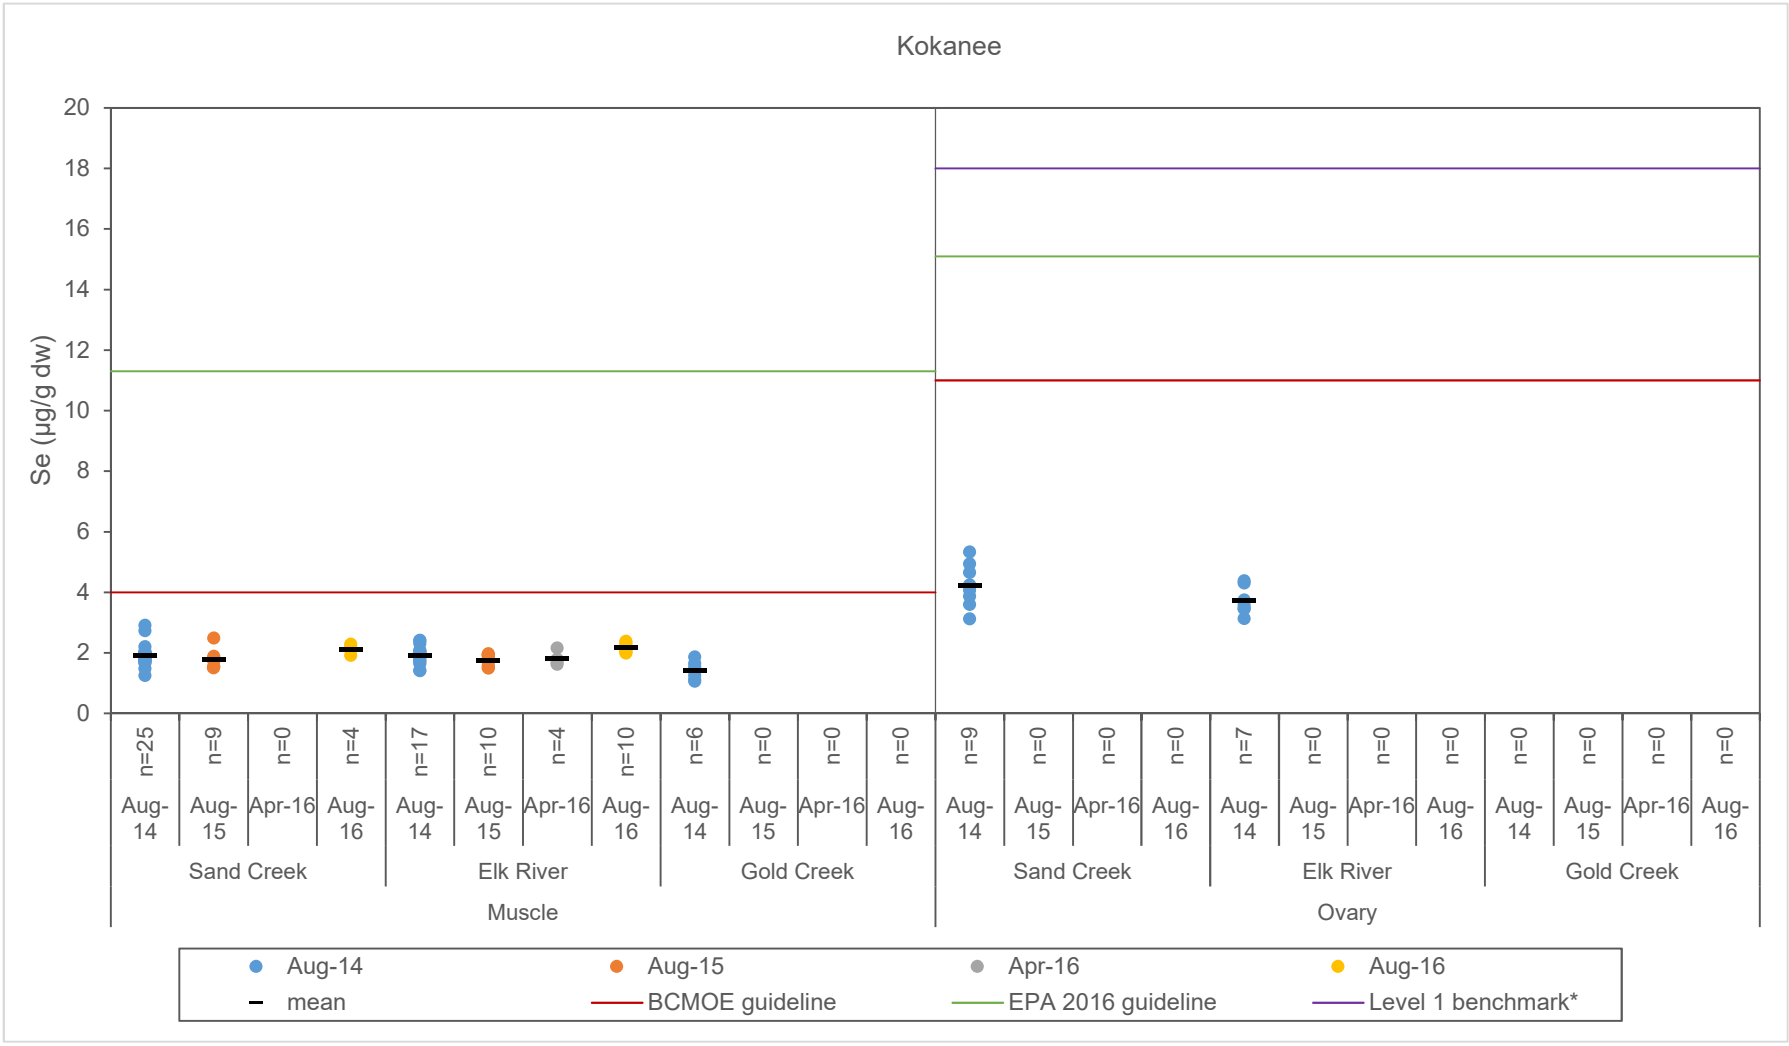

Figure F.20: Muscle and Ovary Tissue Selenium Concentrations (µg/g dw) in Kokanee Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, in August 2014, 2015, 2016 and April 2016

Note: * Level 1 benchmark for effects to fish reproduction (Teck 2014)

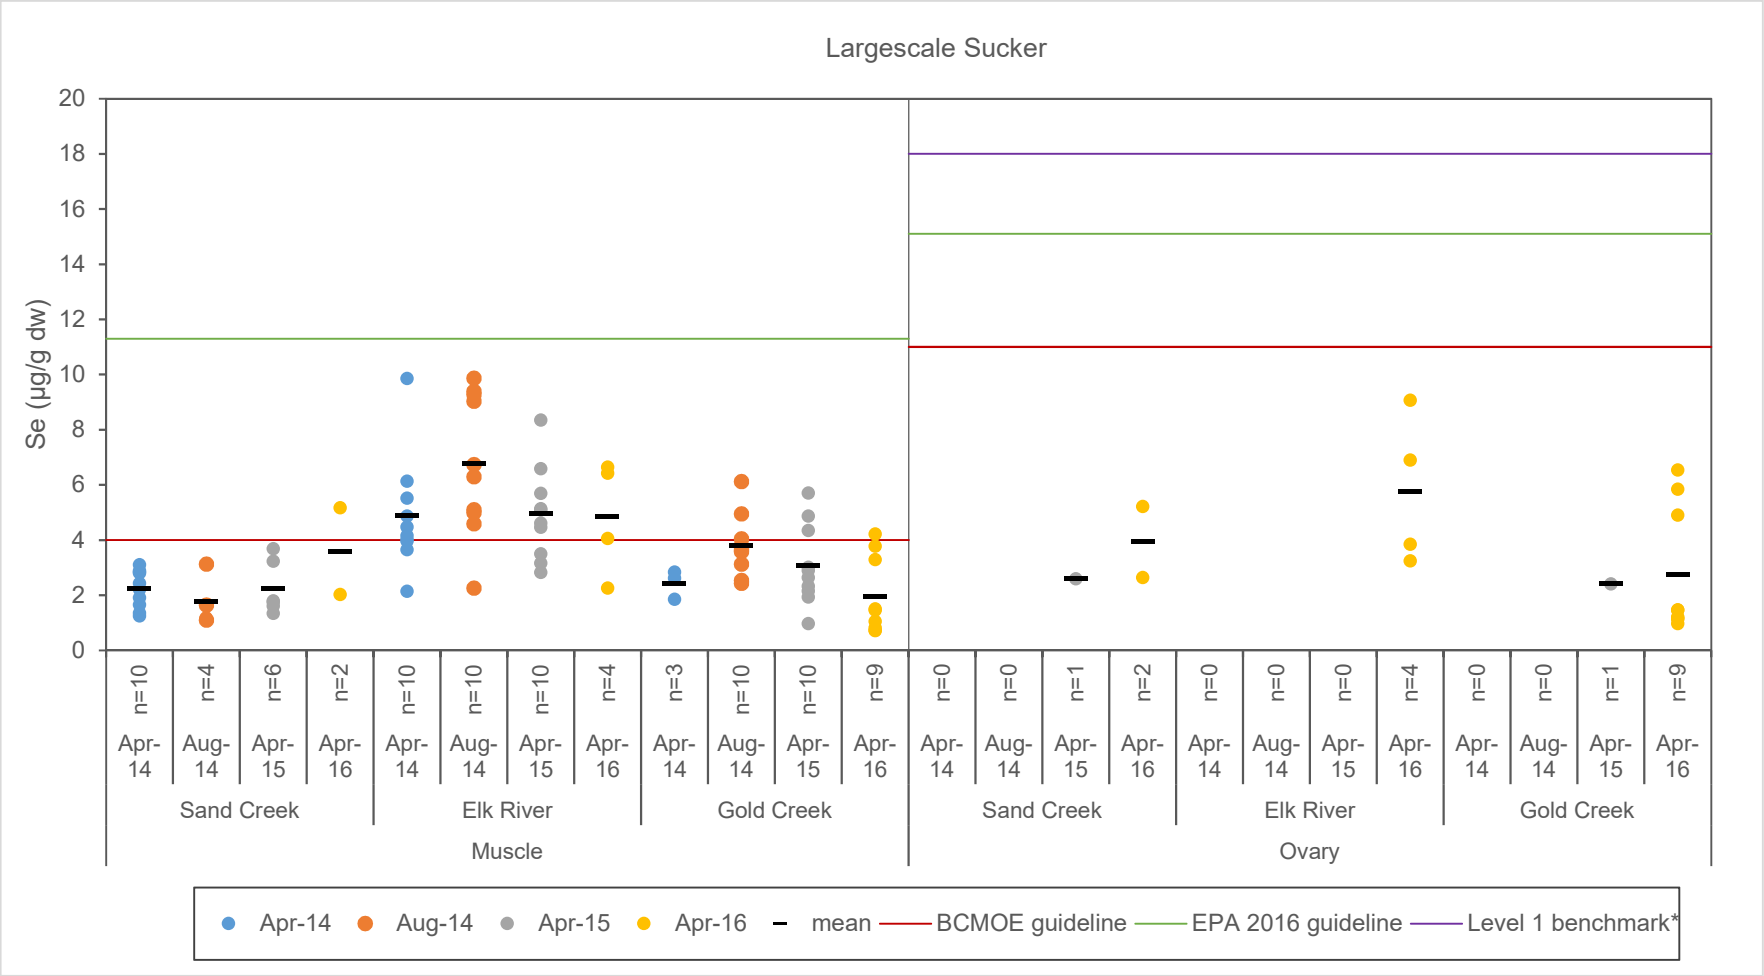

Figure F.21: Muscle and Ovary Tissue Selenium Concentrations (µg/g dw) in Largescale Sucker Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, April 2014, 2015, 2016, and August 2014

Note: * Level 1 benchmark for effects to fish reproduction (Teck 2014)

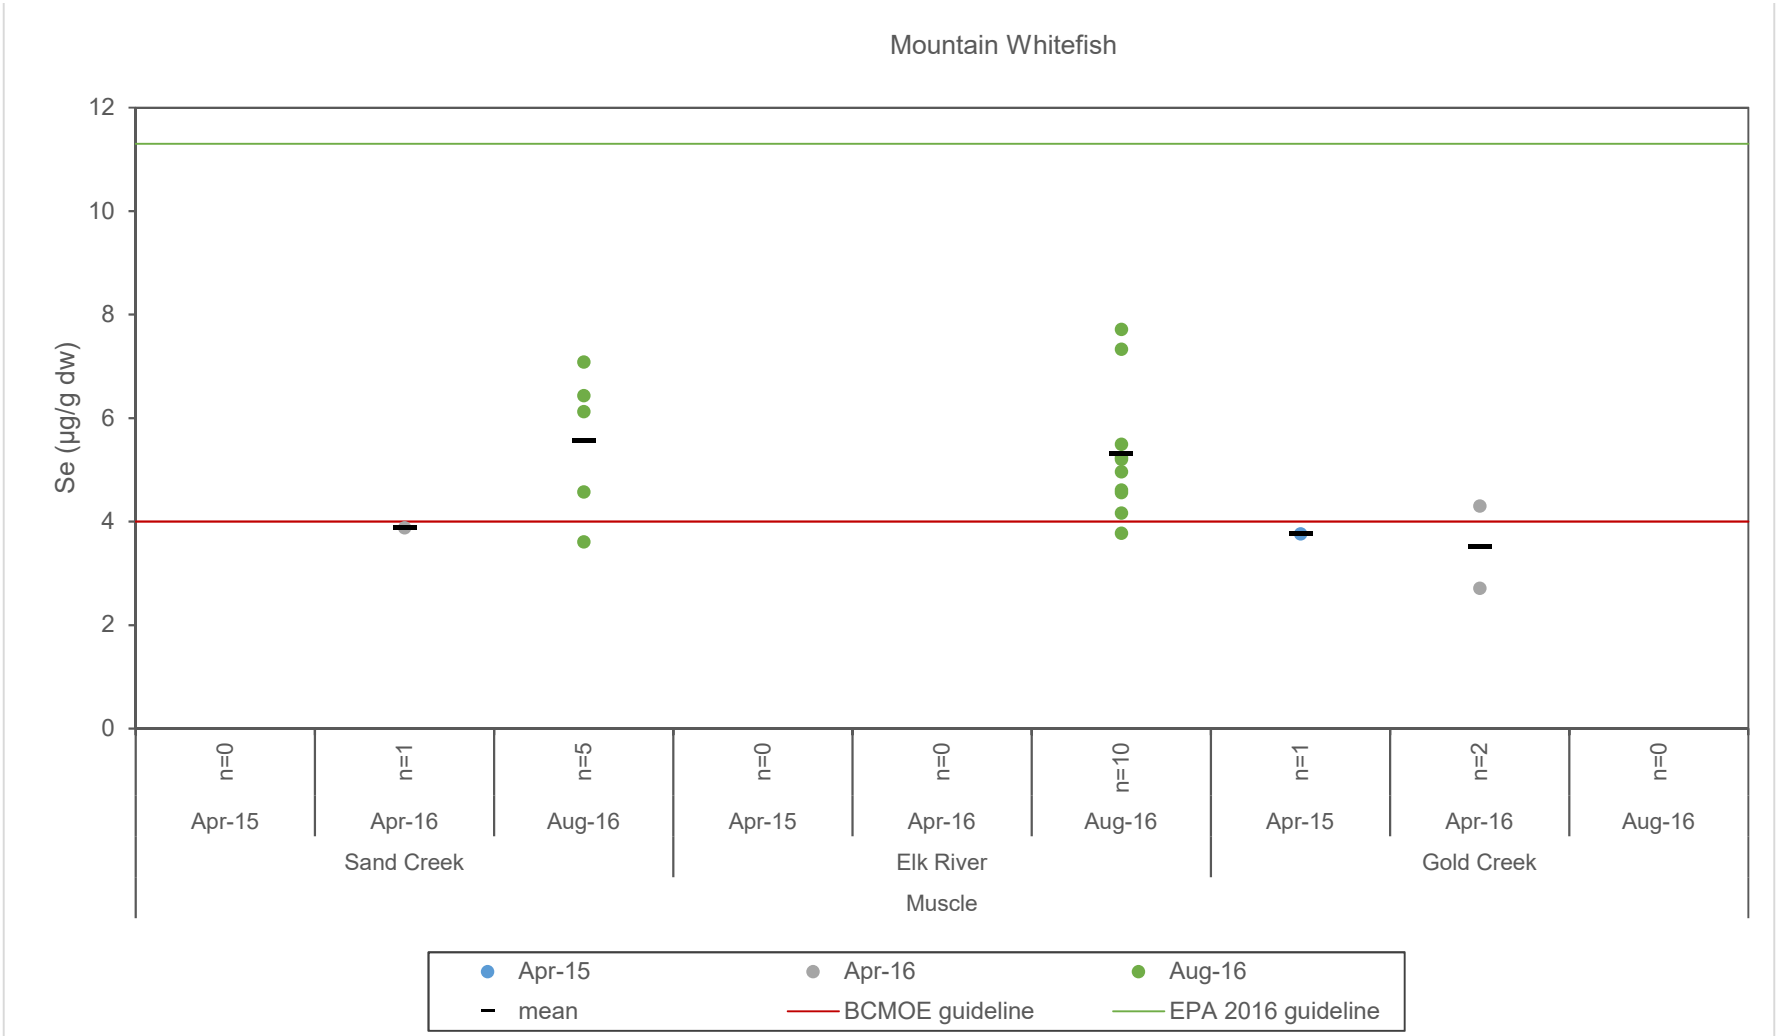

Figure F.22: Muscle Tissue Selenium Concentrations (µg/g dw) in Mountain Whitefish Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, April 2015, 2016, and August 2016

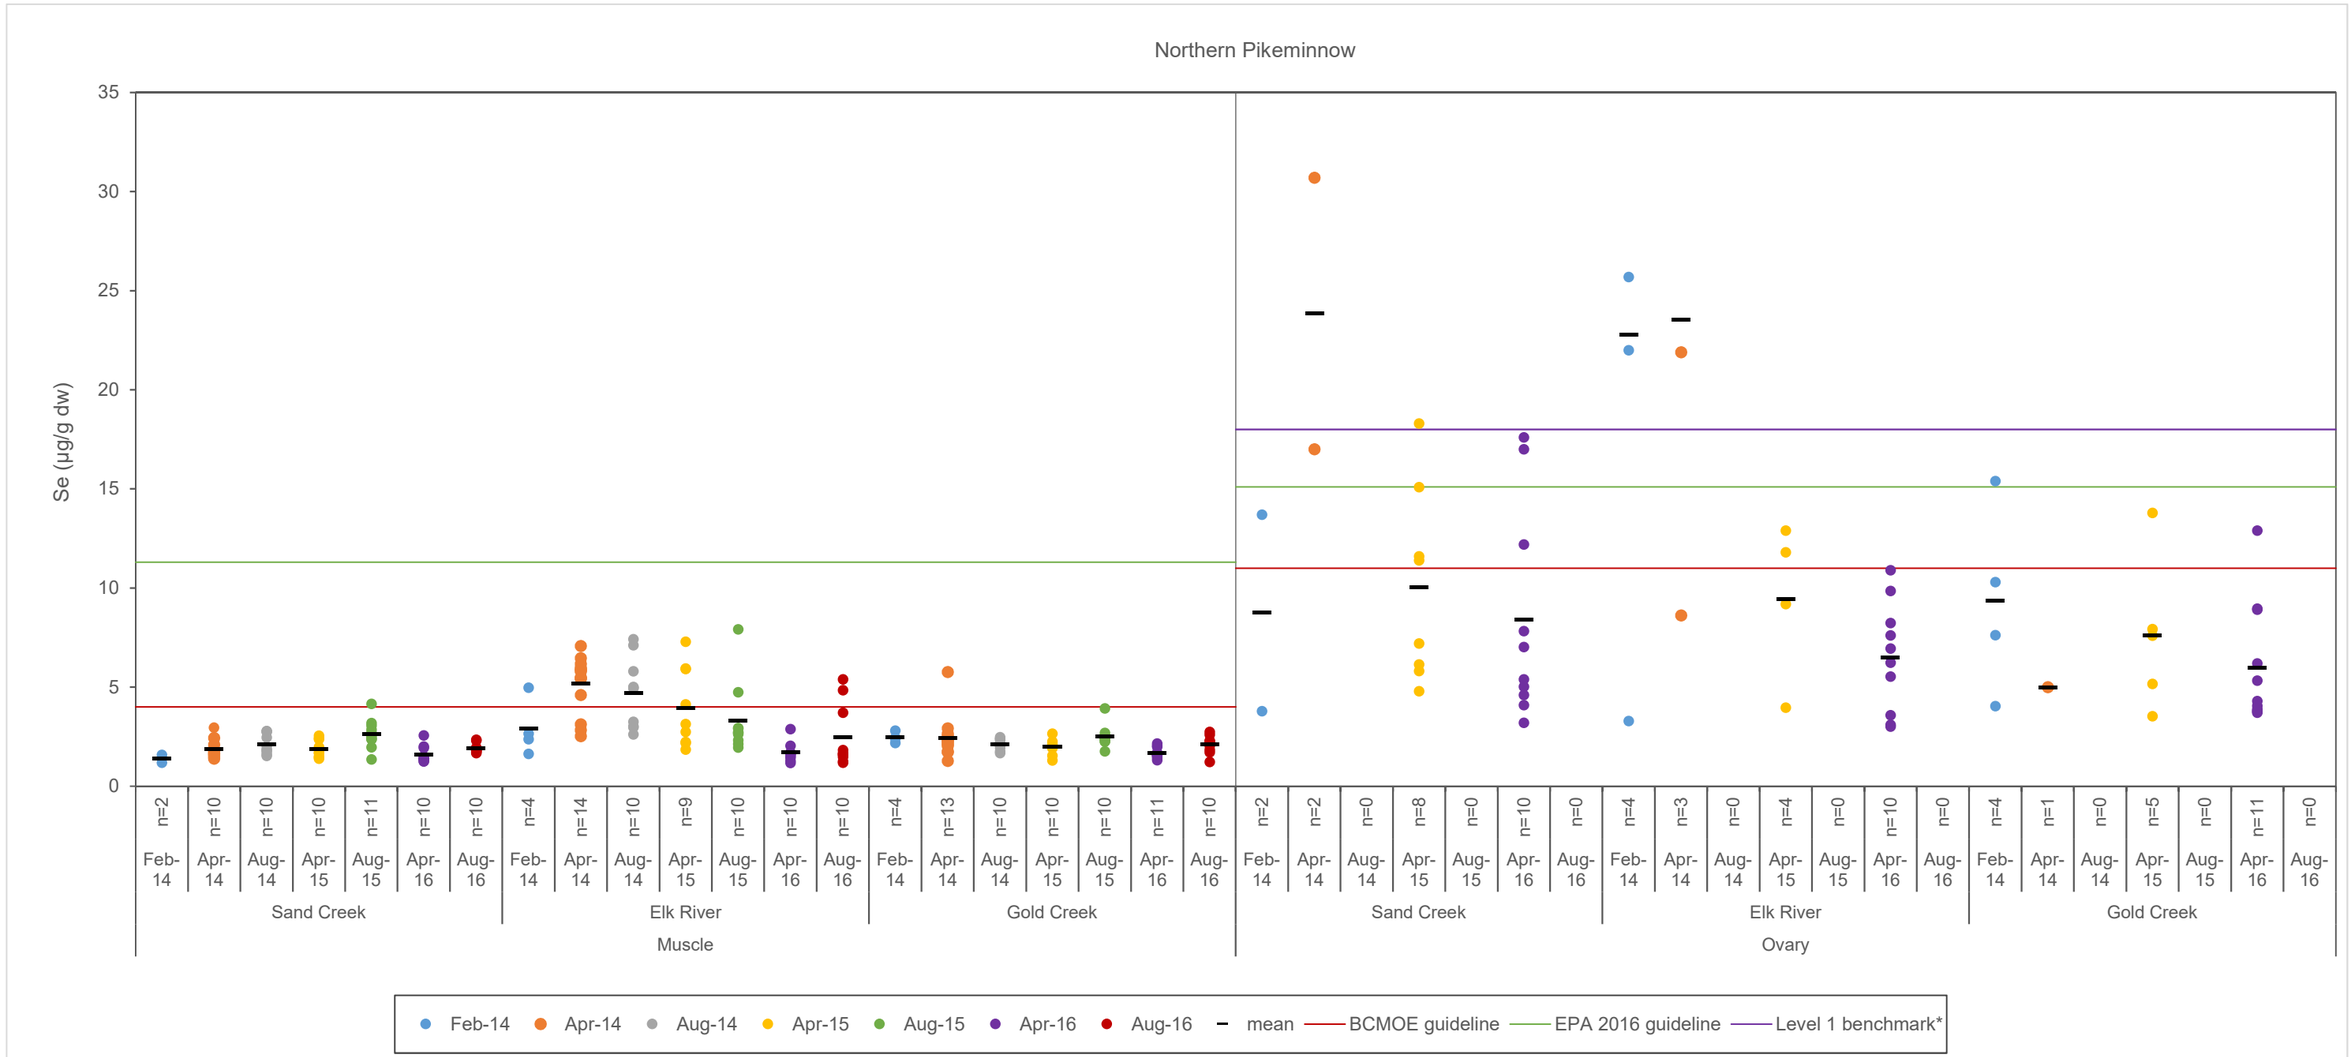

Figure F.23: Muscle and Ovary Tissue Selenium Concentrations (µg/g dw) in Northern Pikeminnow Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, February 2014, April 2014, 2015, 2016, and August 2014, 2015 and 2016

Note: * Level 1 benchmark for effects to fish reproduction (Teck 2014)

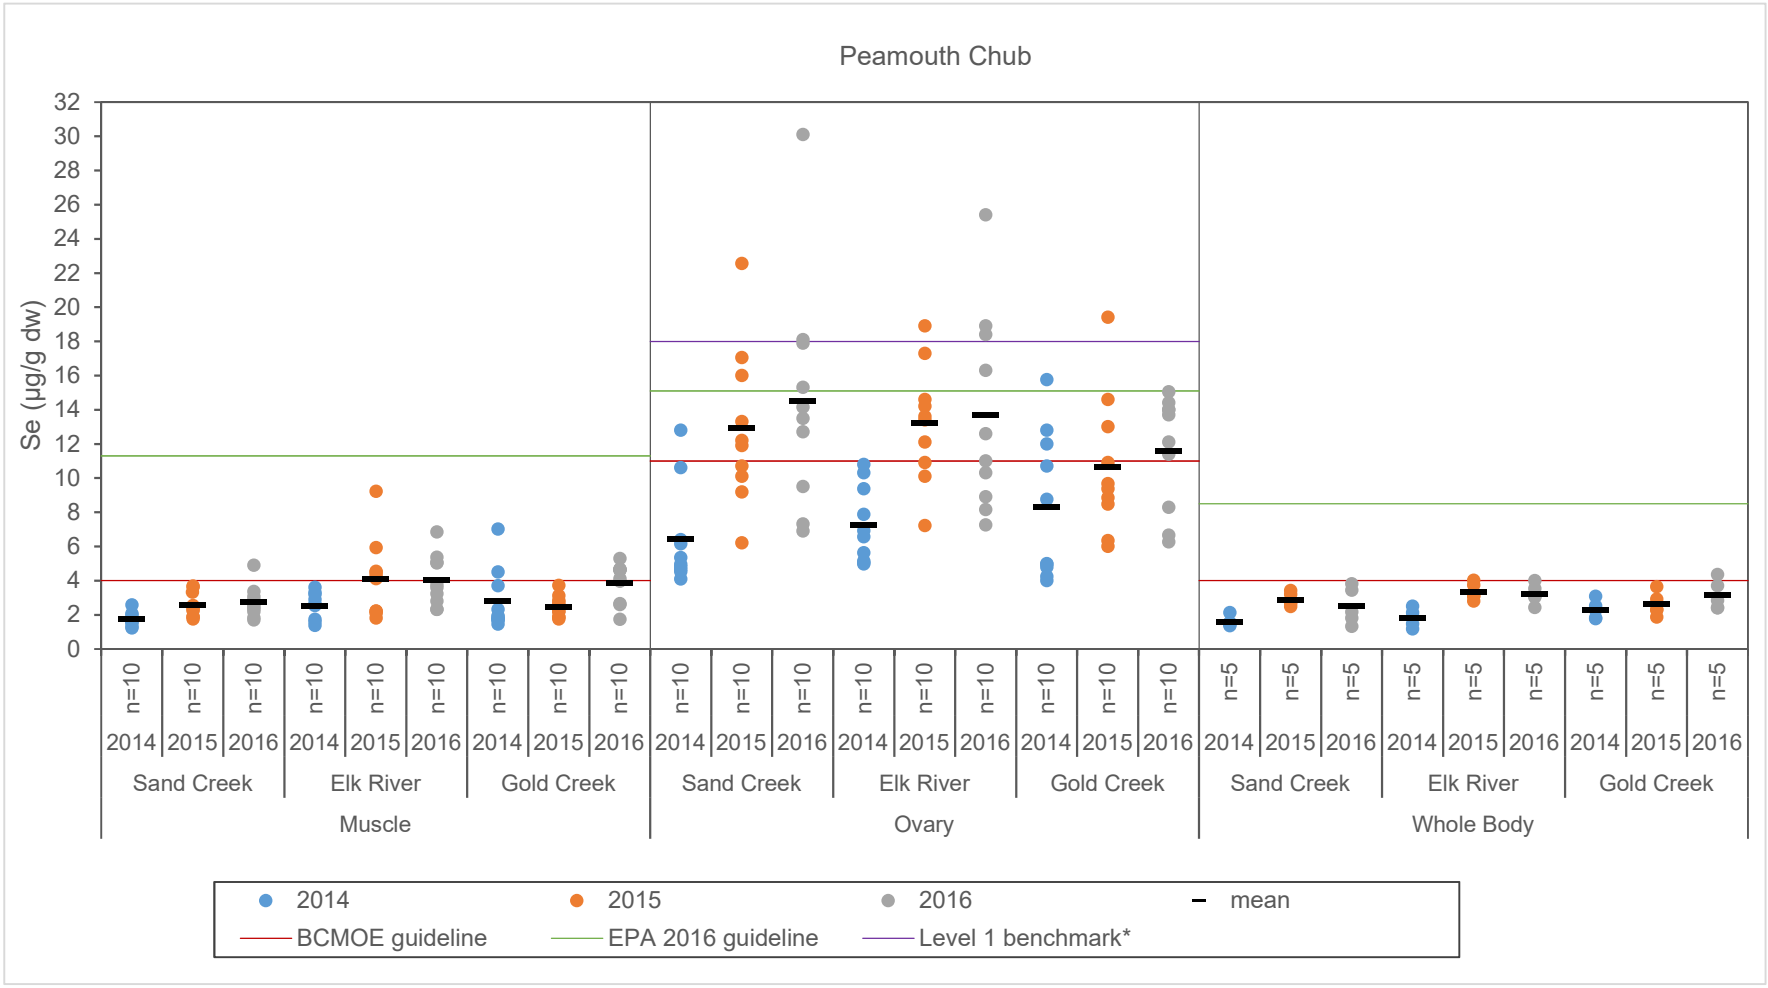

Figure F.24: Muscle, Ovary and Whole Body Tissue Selenium Concentrations (µg/g dw) in Peamouth Chub Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, April 2014, 2015 and 2016

Note: * Level 1 benchmark for effects to fish reproduction (Teck 2014)

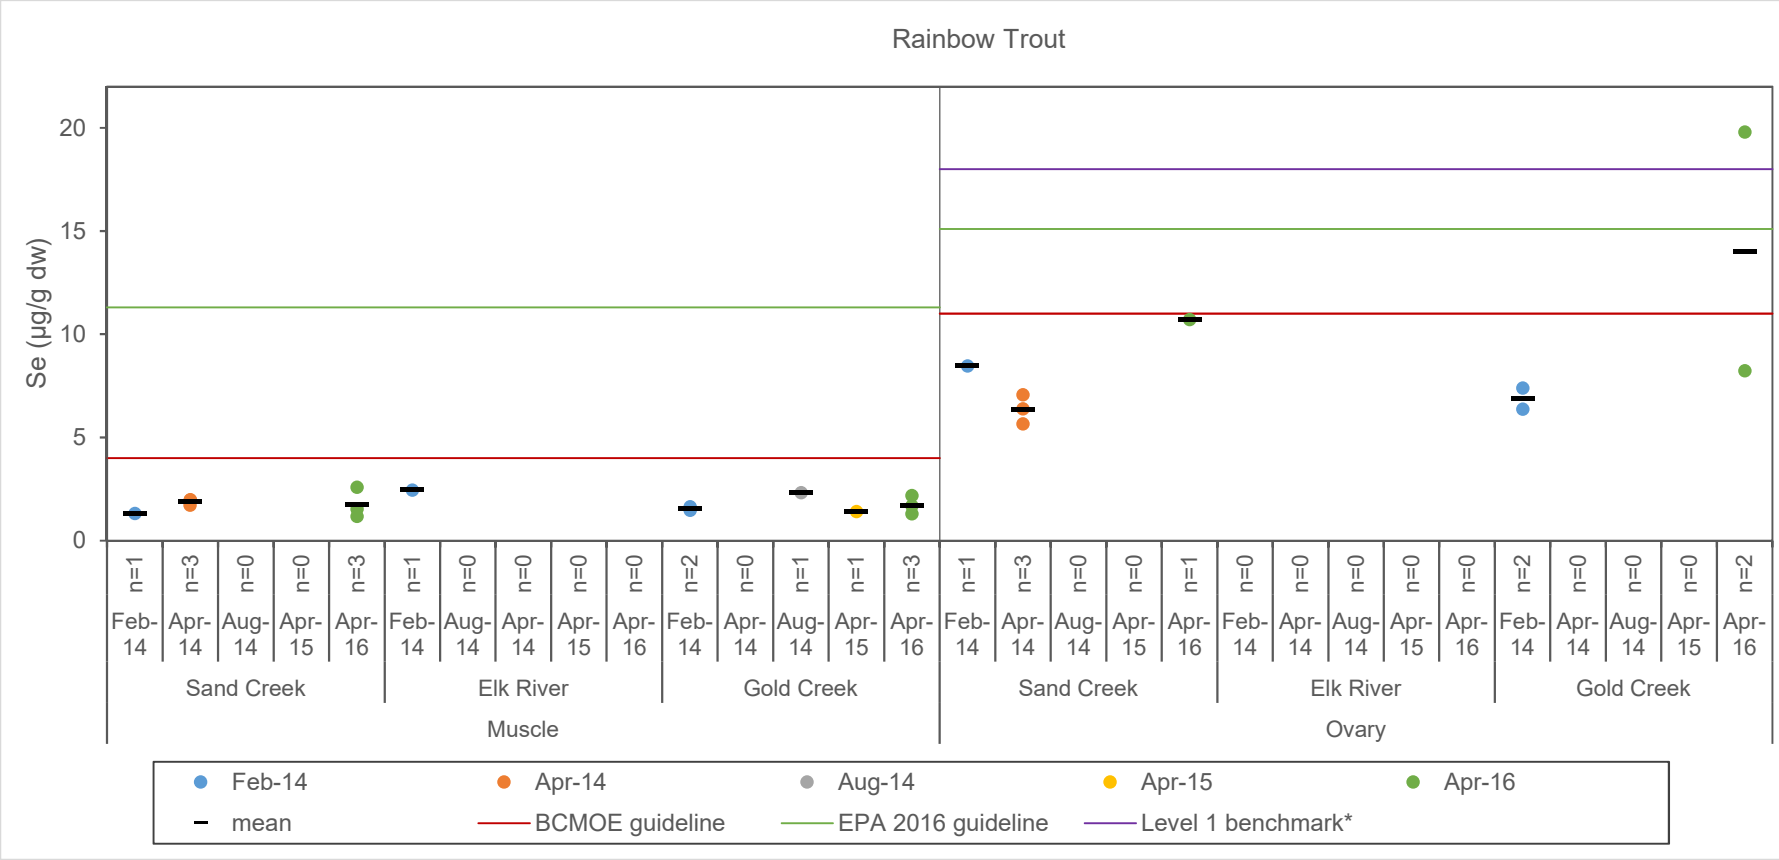

Figure F.25: Muscle and Ovary Tissue Selenium Concentrations (µg/g dw) in Rainbow Trout Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, in February, April, and August 2014, April 2015, and April 2016

Note: * Level 1 benchmark for effects to fish reproduction (Teck 2014)

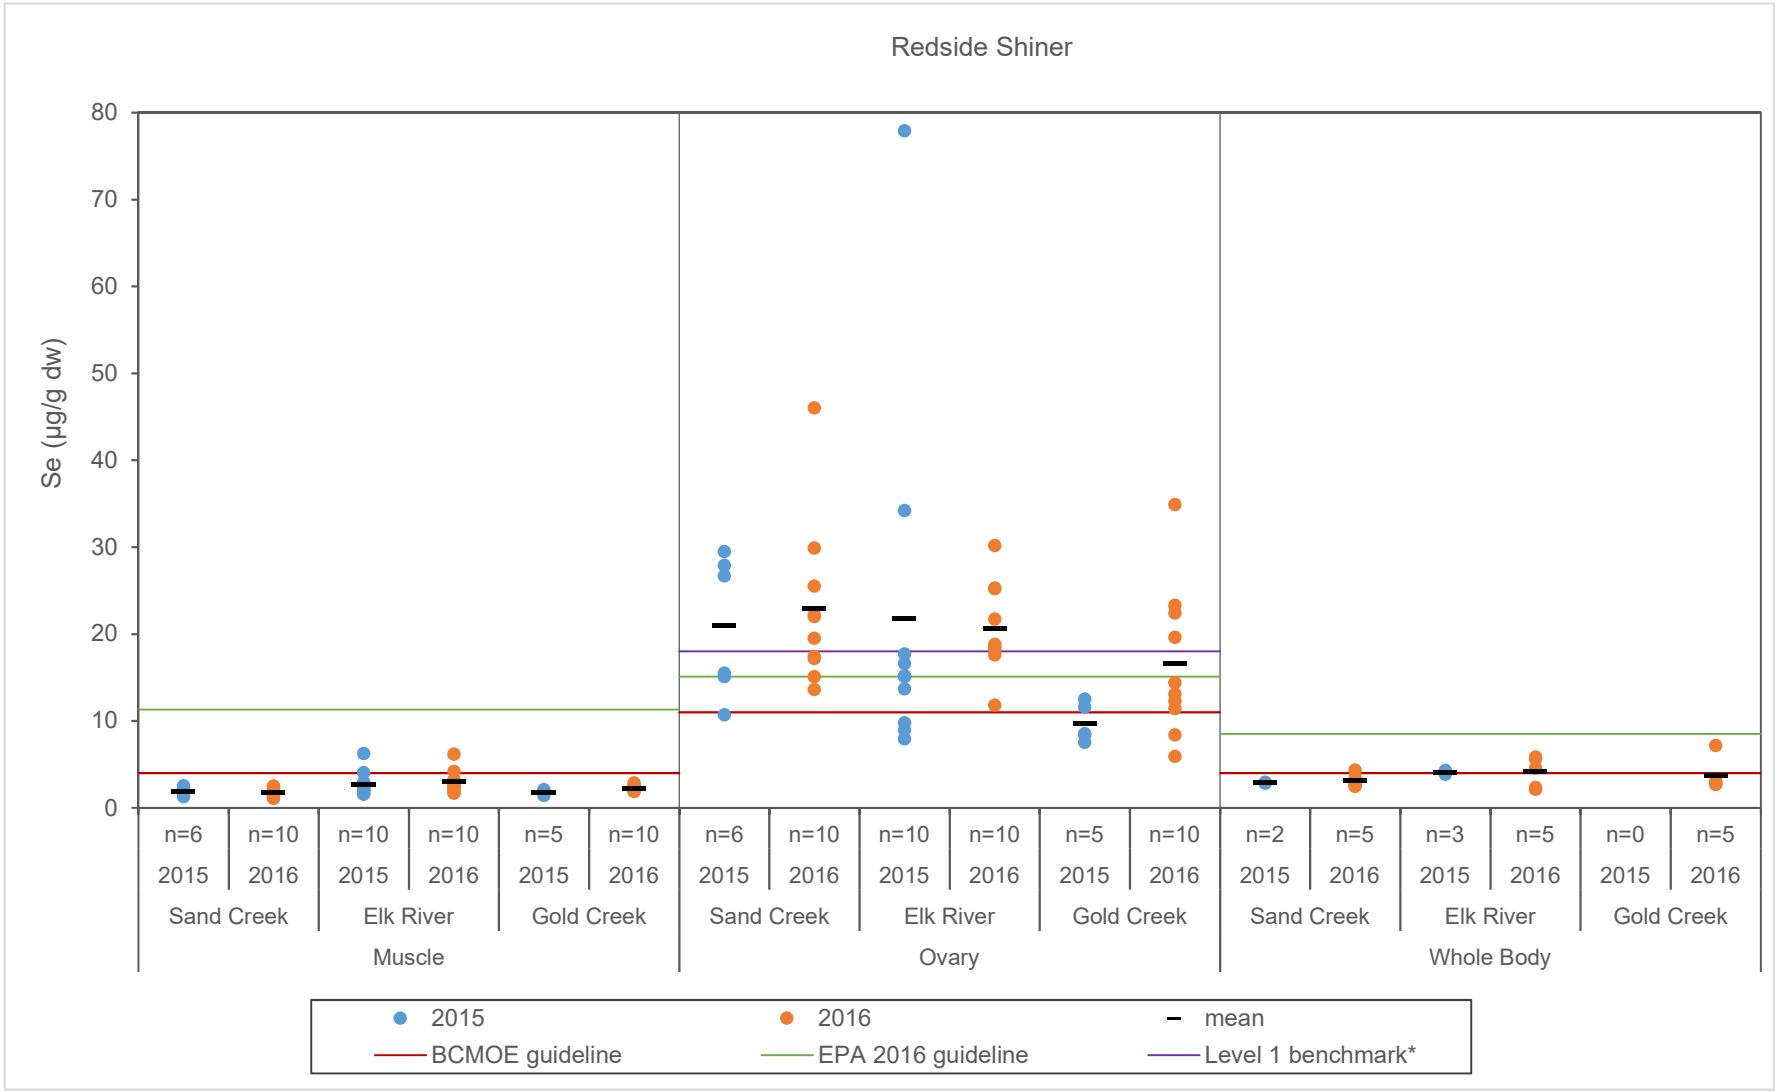

Figure F.26: Muscle, Ovary and Whole Body Tissue Selenium Concentrations (µg/g dw) in Redside Shiner Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, April 2015 and 2016

Note: * Level 1 benchmark for effects to fish reproduction (Teck 2014)

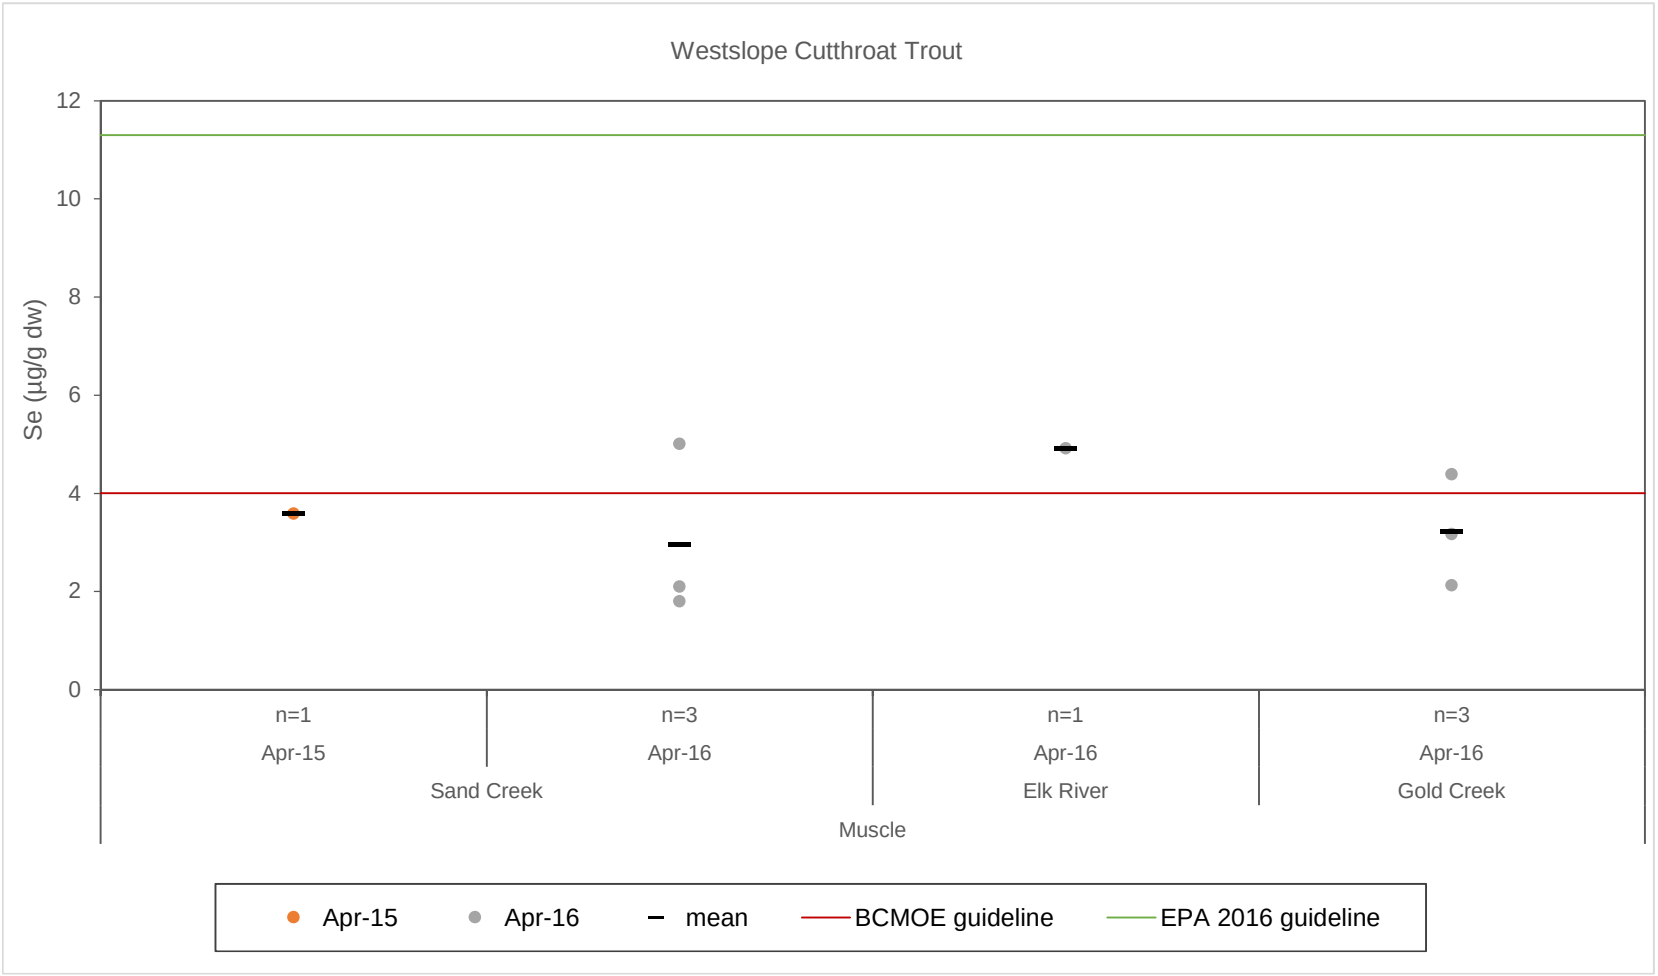

Figure F.27: Muscle Tissue Selenium Concentrations (µg/g dw) in Westslope Cutthroat Trout Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, April 2015 and 2016

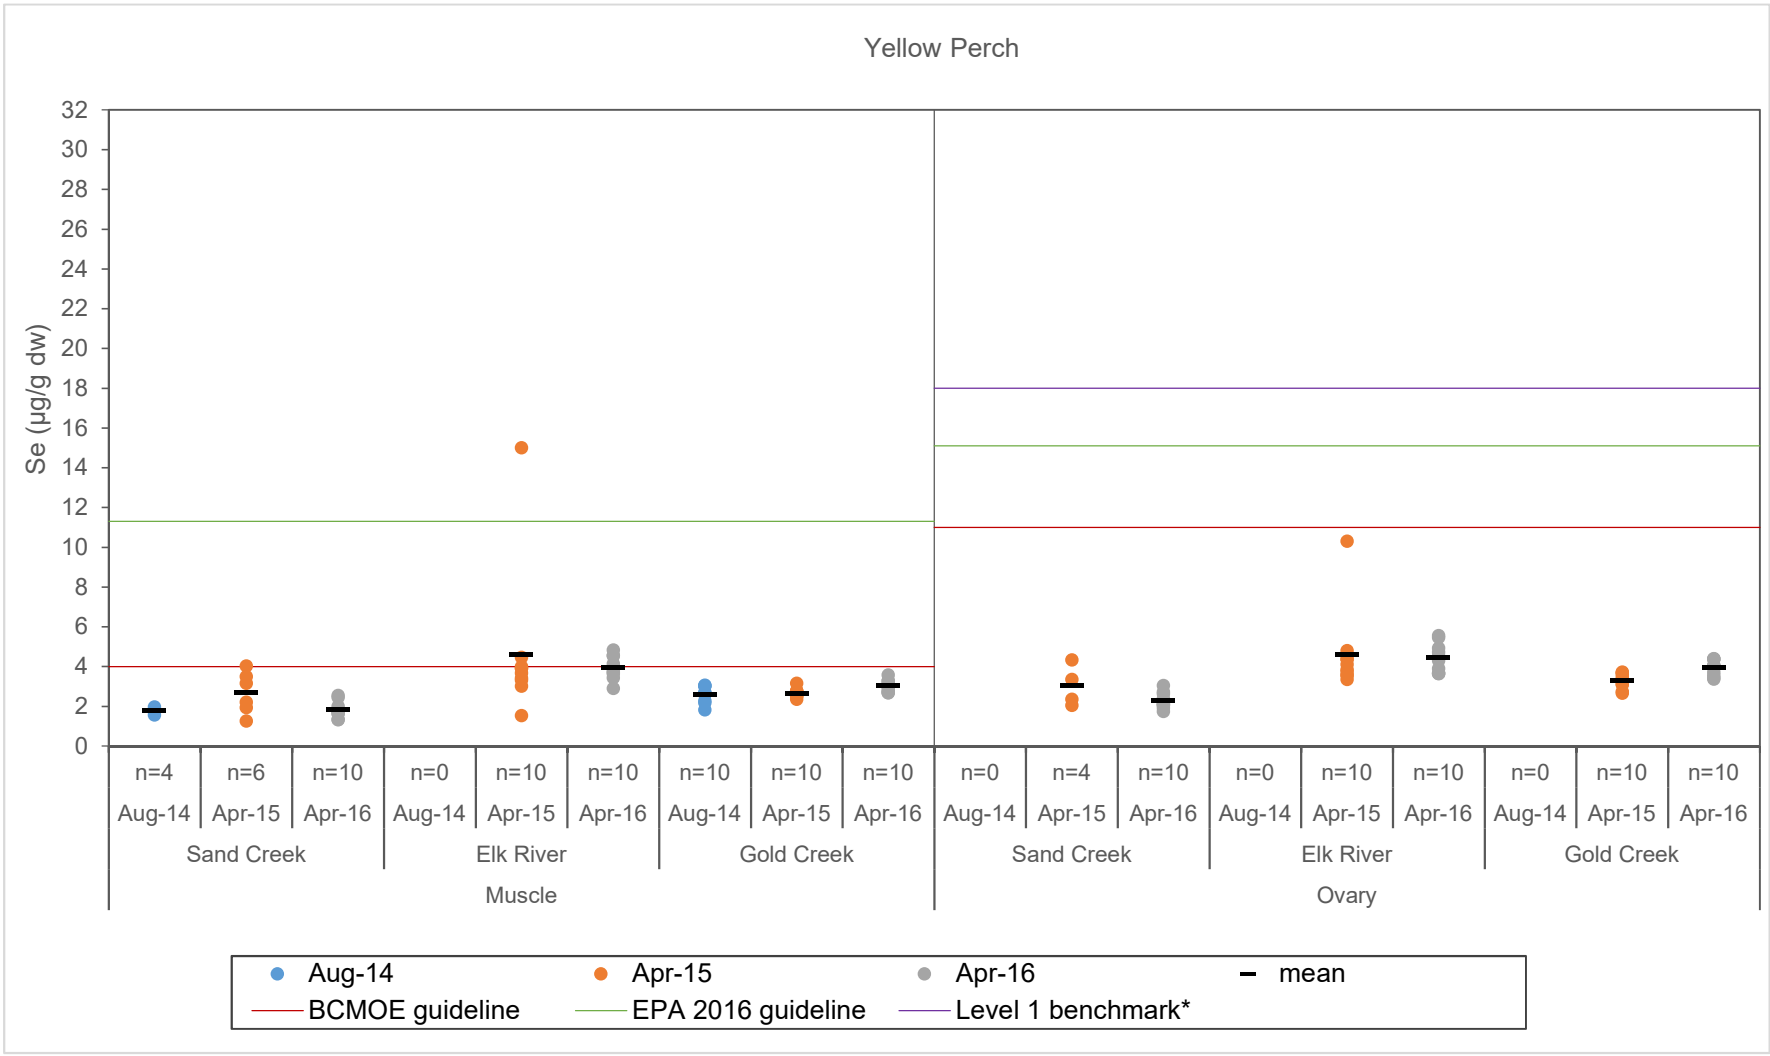

Figure F.28: Muscle and Ovary Tissue Selenium Concentrations (µg/g dw) in Yellow Perch Collected Downstream (Elk River and Gold Creek) and Upstream (Sand Creek) of the Elk River in Koocanusa Reservoir, April 2014, 2015 and 2016

Note: * Level 1 benchmark for effects to fish reproduction (Teck 2014)

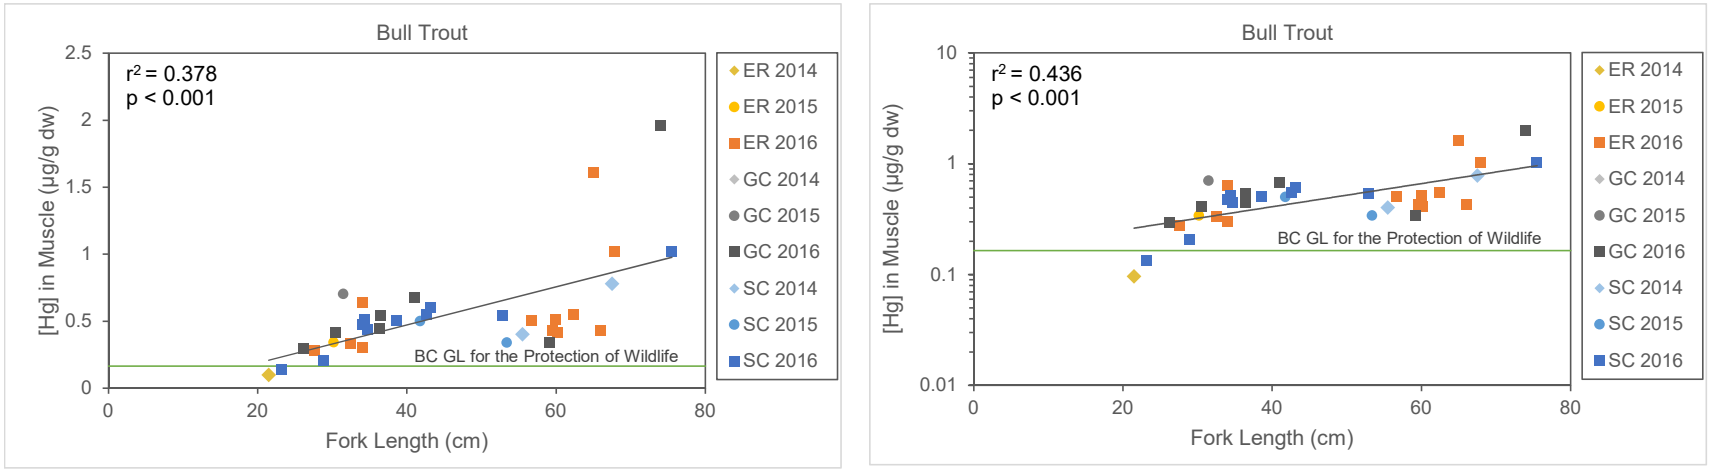

Figure F.29: Mercury Concentrations (µg/g dw) in Bull Trout Muscle Relative to Fork Length (cm) in Koocanusa Reservoir, April 2014 to 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

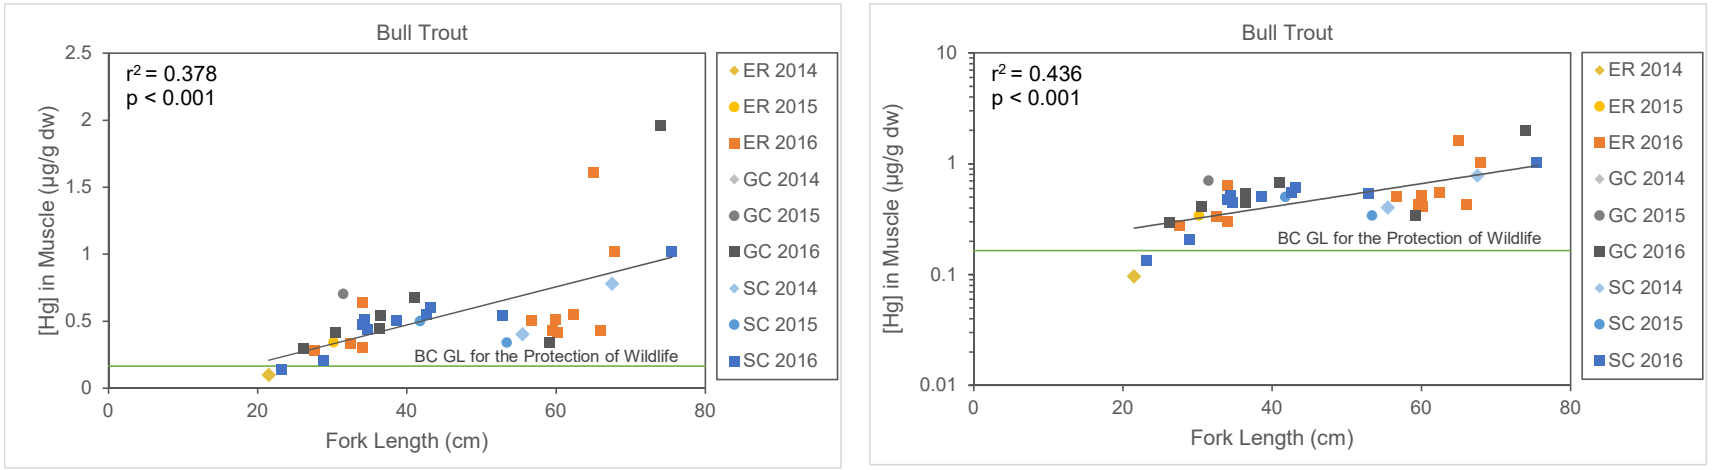

Figure F.30: Mercury Concentrations (µg/g dw) in Bull Trout Muscle Relative to Fork Length (cm) in Koocanusa Reservoir, April 2014 to 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

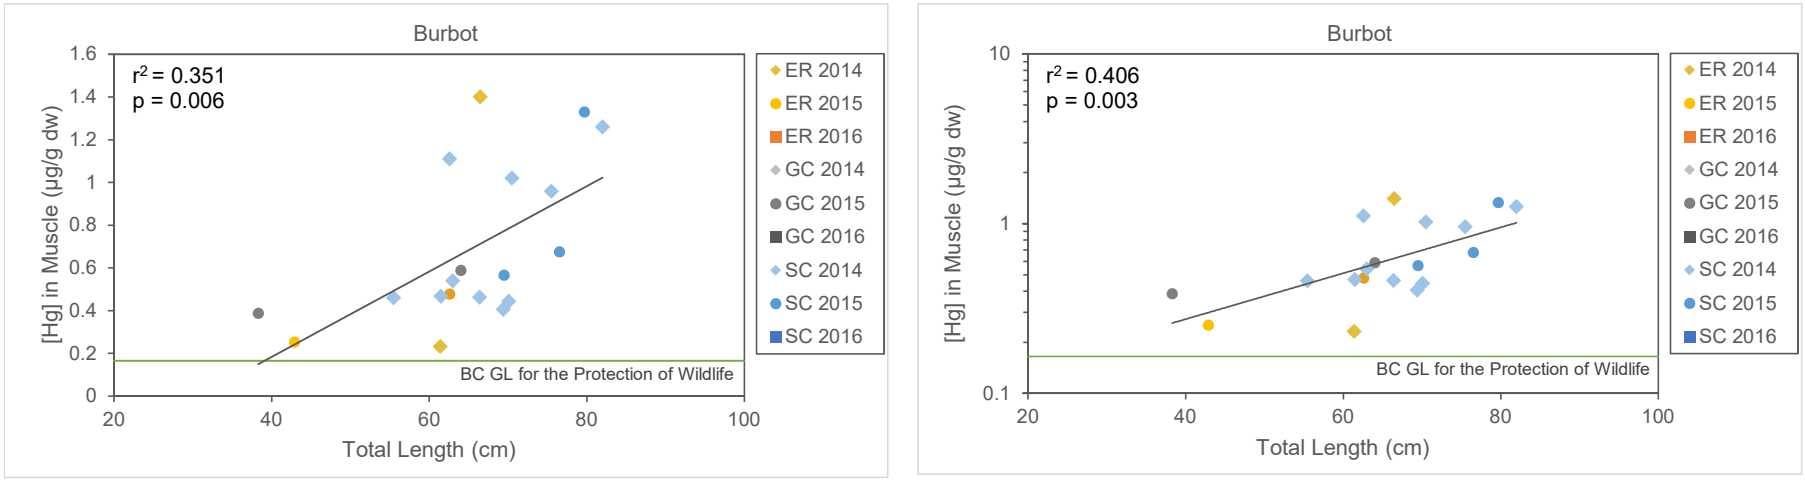

Figure F.31: Mercury Concentrations (µg/g dw) in Burbot Muscle Relative to Total Length (cm) in Koocanusa Reservoir, 2014 - 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

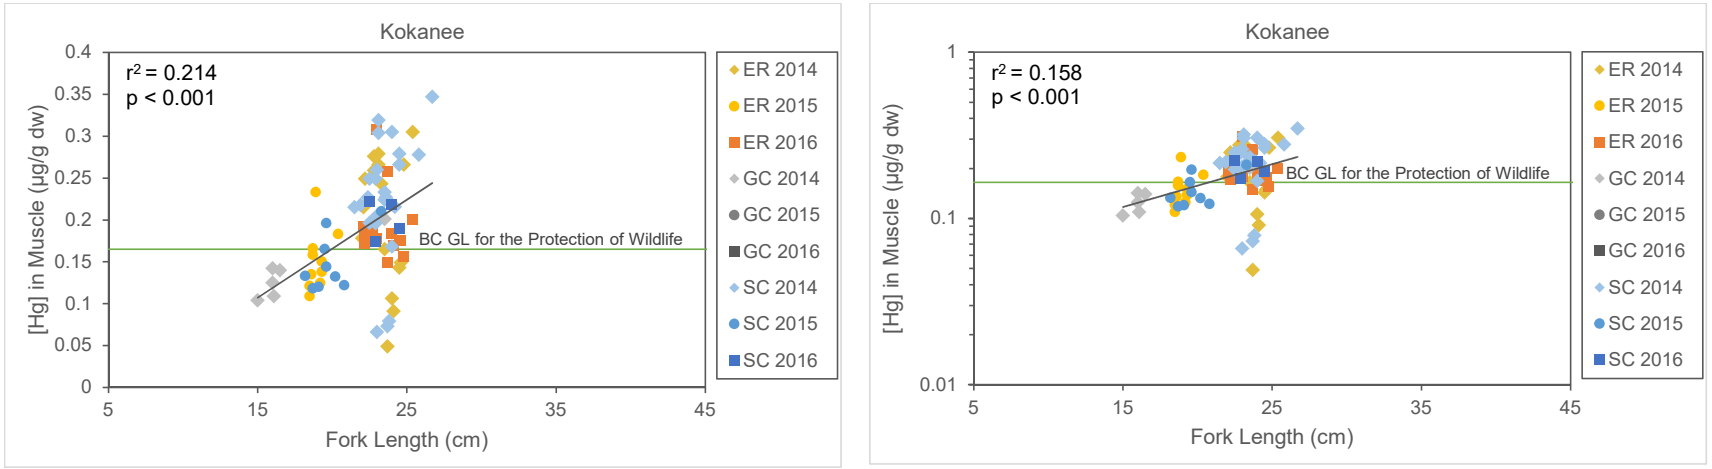

Figure F.32: Mercury Concentrations in Kokanee Muscle Relative to Fork Length (cm) in Koocanusa Reservoir, 2014 to 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

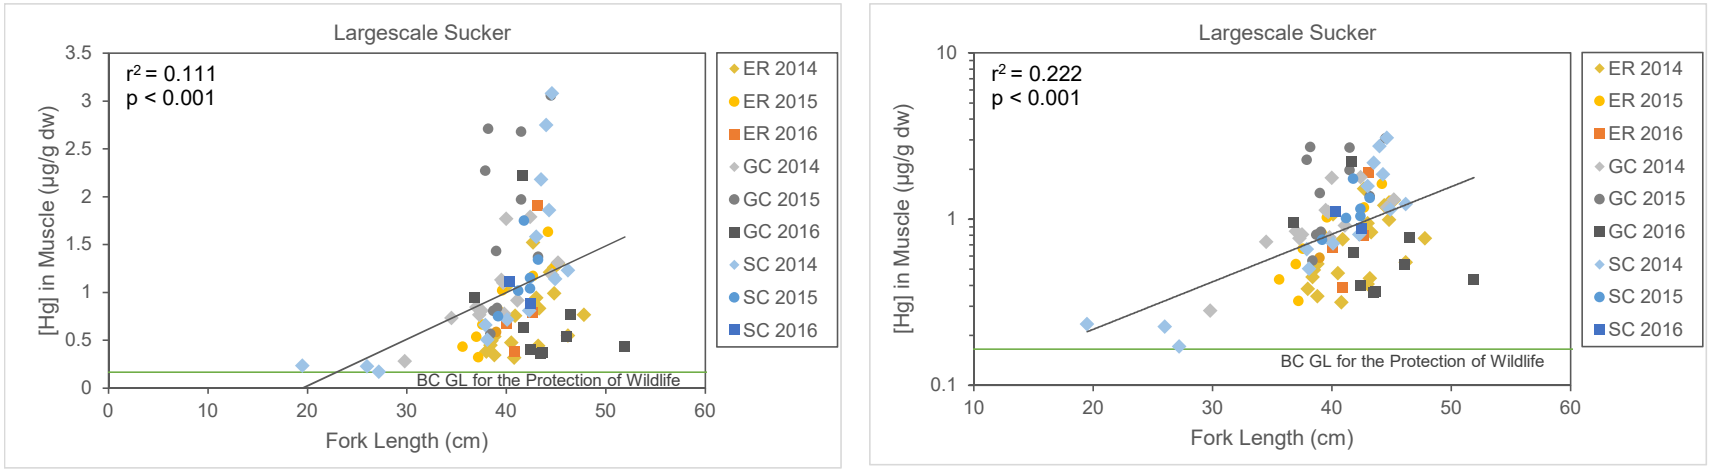

Figure F.33: Mercury Concentrations in Largescale Sucker Muscle Relative to Fork Length (cm) in Koocanusa Reservoir, 2014 to 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

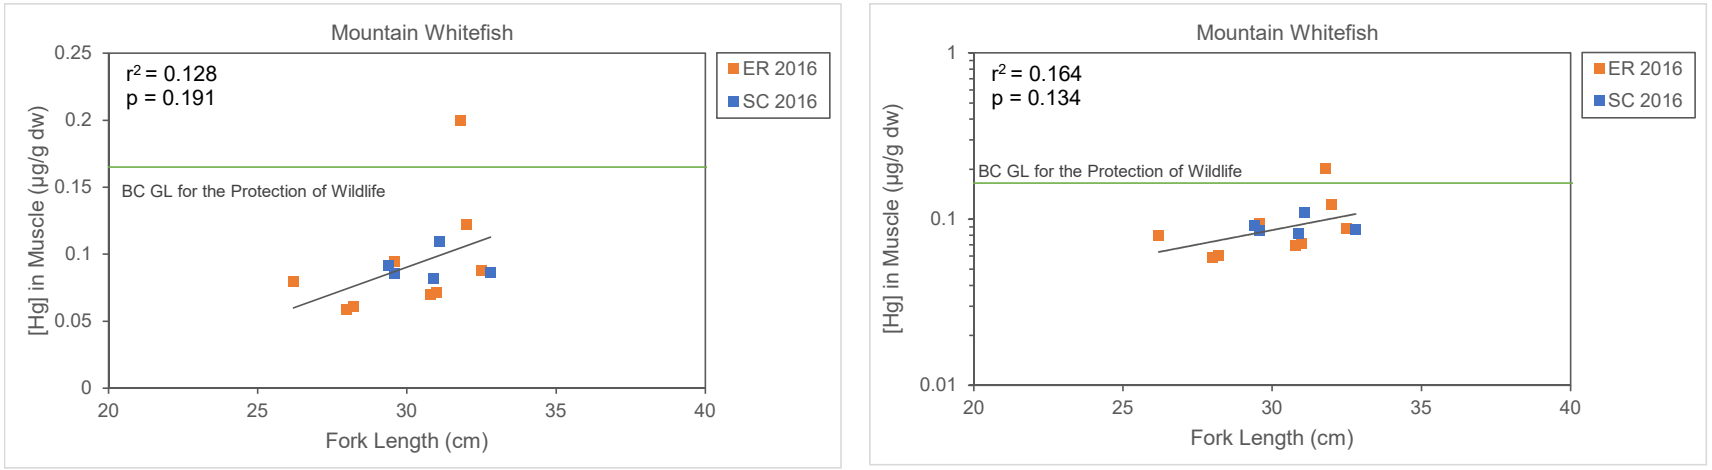

Figure F.34: Mercury Concentrations (µg/g dw) in Mountain Whitefish Muscle Relative to Fork Length (cm) in Koocanusa Reservoir, August, 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

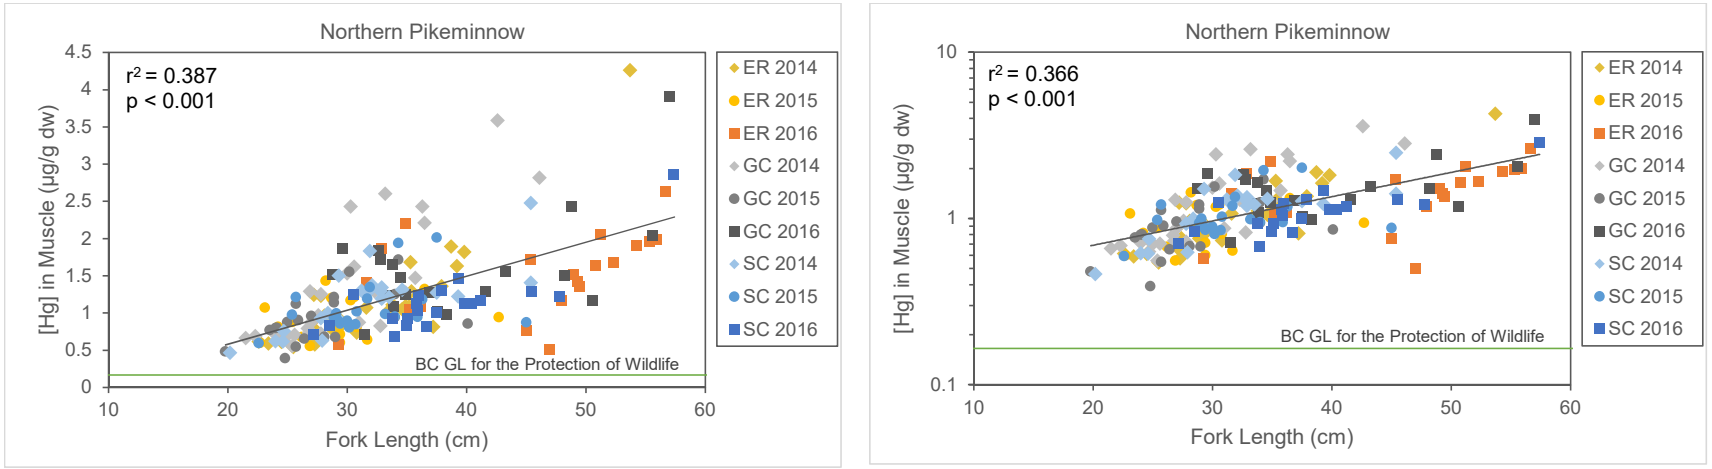

Figure F.35: Mercury Concentrations in Northern Pikeminnow Muscle Relative to Fork Length (cm) in Koocanusa Reservoir, 2014 to 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

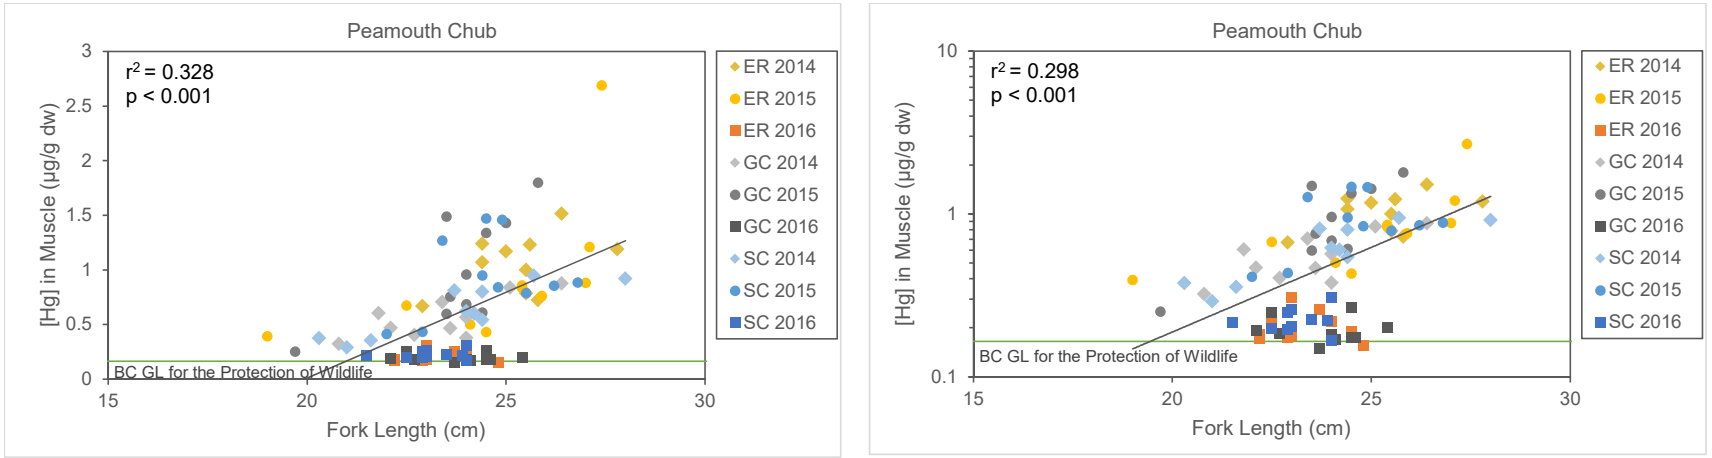

Figure F.36: Mercury Concentrations (µg/g dw) in Peamouth Chub Muscle Relative to Fork Length (cm) in Koocanusa Reservoir, April, 2014, 2015, and 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

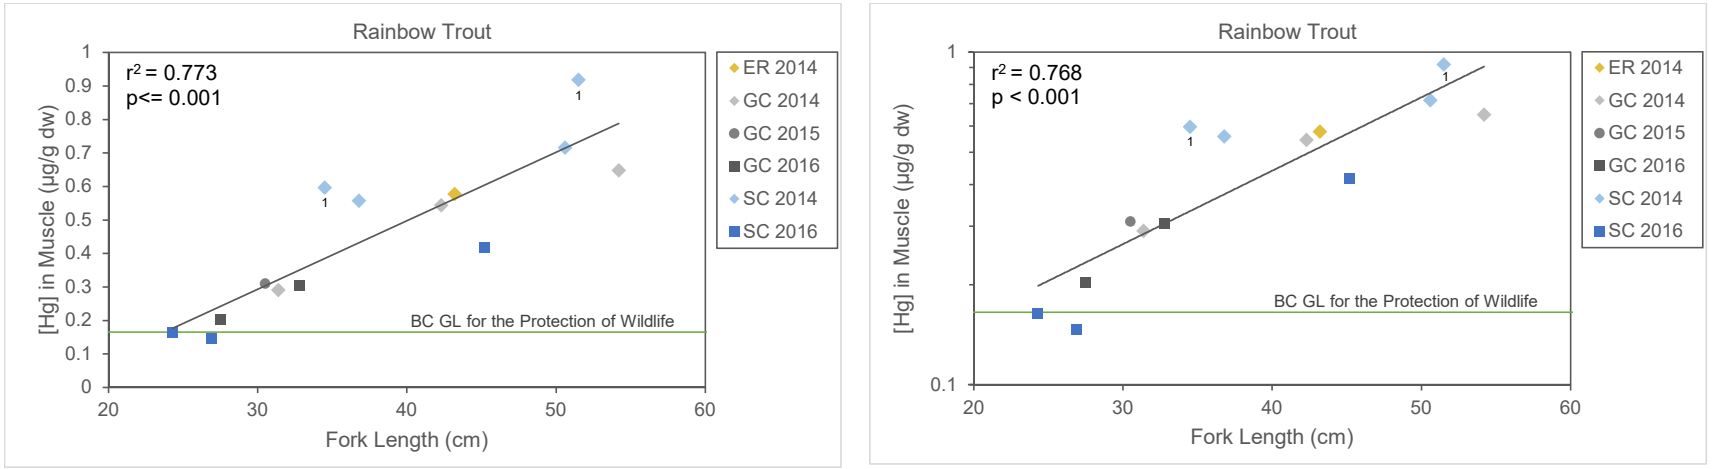

Figure F.37: Mercury Concentrations (µg/g dw) in Rainbow Trout Muscle Relative to Fork Length (cm) in the Koocanusa Reservoir, February 2014, April 2014 to 2016, and August 2014

[1] indicates that Total Length was used.

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

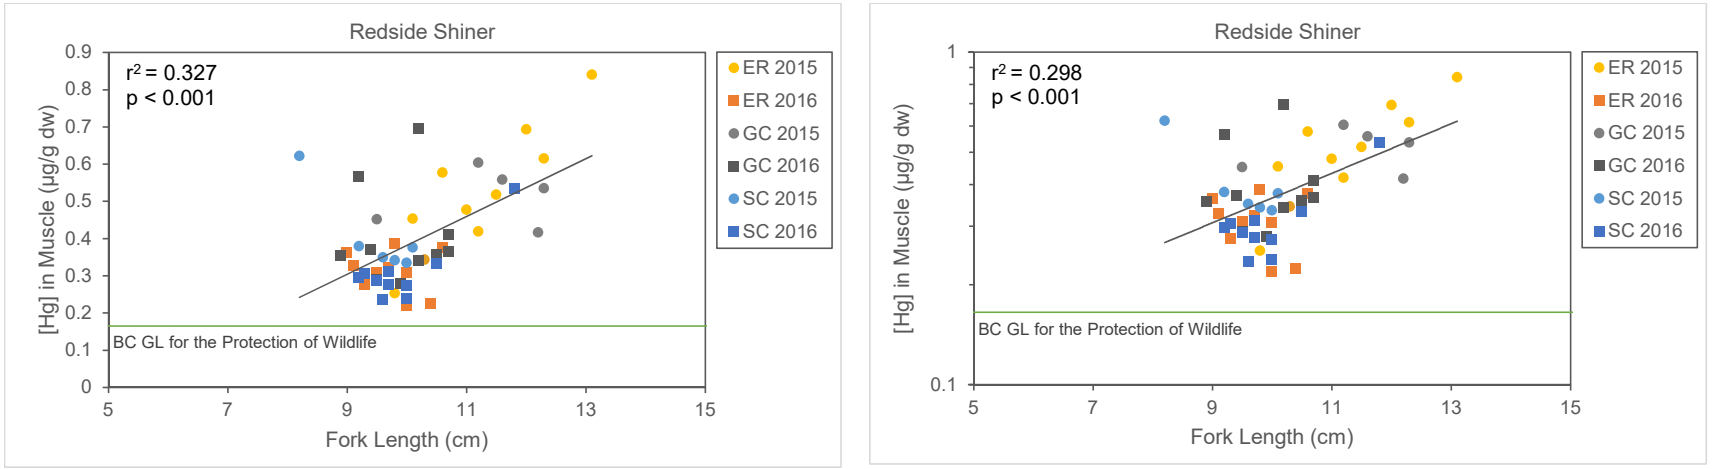

Figure F.38: Mercury Concentrations (µg/g dw) in Redside Shiner Muscle Relative to Fork Length (cm) in the Koocanusa Reservoir, April 2015 to 2016

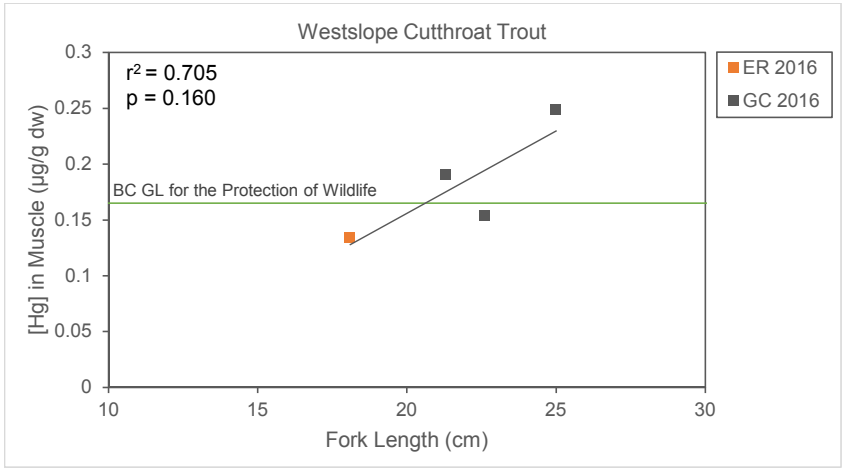
Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%. No data was available for redside shiners, so golden shiners were used for comparative purpose.



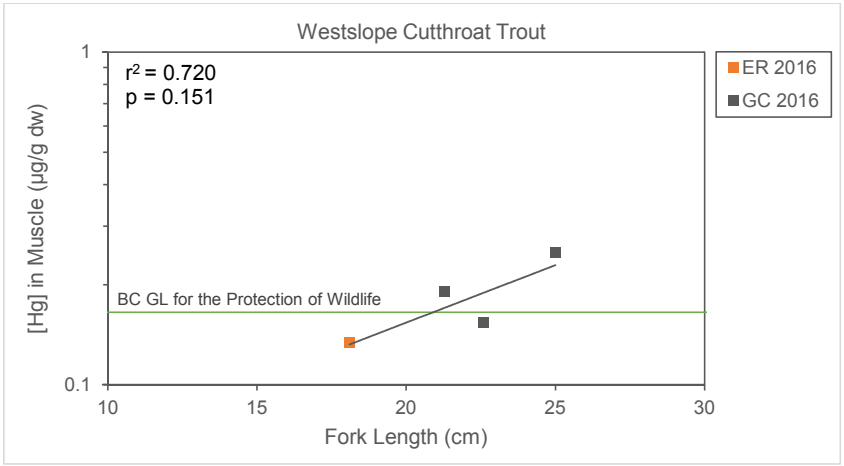


Figure F.39: Mercury Concentrations (µg/g dw) in Westslope Cutthroat Trout Muscle Relative to Fork Length (cm) in the Koocanusa Reservoir, April 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

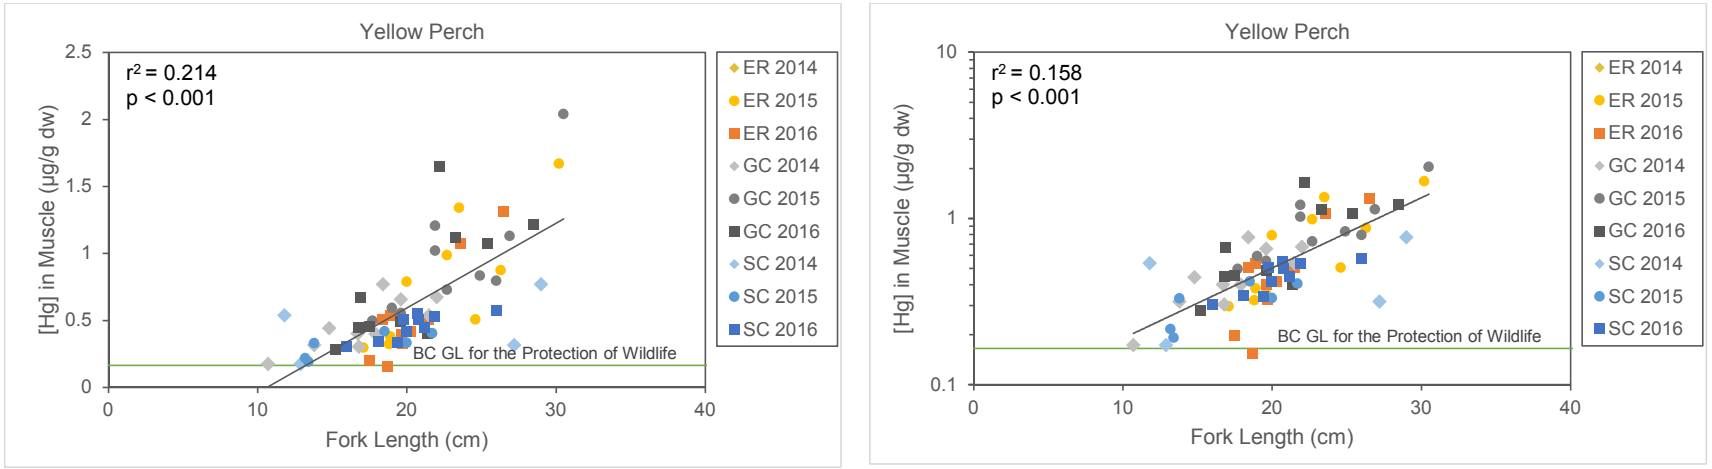

Figure F.40: Mercury Concentrations (µg/g dw) in Yellow Perch Muscle Relative to Fork Length (cm) in the Koocanusa Reservoir, April 2014 to 2016

Notes: Sand Creek (SC) study area is located upstream of the Elk River, while Elk River (ER) and Gold Creek (GC) study areas are located downstream of the Elk River confluence. Assuming all mercury is present as methyl-mercury (CCME 2000). The BC guideline for the protection of wildlife (0.033 µg/g ww) was converted to dry weight based on an average moisture content in fish muscle in Koocanusa Reservoir of approximately 80%.

Angling

[a] Total catch-per-unit-effort (CPUE) is the number of fish caught / effort used, expressed as number of fish per 100 m hr.

[b] Sacrificed for lethal sampling program.

[c] Mortalities are only the fish that died by accident (incidental mortalities)

[a] Total catch-per-unit-effort (CPUE) calculated as the total catch of a single species over the total effort for all the hoop net sets in one area.

[b] Net was found on April 24, 2016 on shoreline and spoke with a conservation officer.

[a] Age structures collected: sc - scales, pf - pectoral fin-ray.

[b] Adjusted body weight represents whole body weight less the liver weight and gonad weight and used for statistical analyses.

[c] Confidence around provided ages was low (i.e., at or below 50% confidence).

[a] Age structures collected: sc - scales, pf - pectoral fin-ray.

[b] Adjusted body weight represents whole body weight less the liver weight and gonad weight and used for statistical analyses.

[c] Confidence around provided ages was low (i.e., at or below 50% confidence).

Table F.23: Summary Statistics for Largescale Sucker Meristic Data Used for the Fish Health Assessment and Collected near Sand Creek, Elk River, and Gold Creek in Koocanusa Reservoir, 2015 and 2016

[a] Age structures collected: sc - scales, oto - otoliths.

[b] Confidence around provided age was low (i.e., at or below 50% confidence).

[c] Adjusted body weight represents whole body weight less the liver weight and gonad weight and used for statistical analyses.

[a] Age structures collected: sc - scales, oto - otoliths.

[b] Confidence around provided age was low (i.e., at or below 50% confidence).

[c] Adjusted body weight represents whole body weight less the liver weight and gonad weight and used for statistical analyses.

[a] Age structures collected: sc - scales, oto - otoliths.

[b] Confidence around provided age was low (i.e., at or below 50% confidence).

[c] Adjusted body weight represents whole body weight less the liver weight and gonad weight and used for statistical analyses.

	Angling	Total Caught	0	0	14	1	0	**15**	
		CPUE[b]	0	0	13	0.95	0	**14**	

[a] Gold Creek was not sampled as the ice at Gold Creek mouth was too thin, which presented a risk to health and safety.

[b] Total catch-per-unit-effort (CPUE) calculated as the total catch of a single species over the total effort for a fishing method in a study area (i.e., number of fish per angler per 24 hour period, number of fish per burbot trap per 24 hour period).

Table F.41: Summary of Fish Catches at the Sand Creek, Elk River, and Gold Creek Study Areas in Koocanusa Reservoir, April 2015

Study Area	Fishing Method	Summary Statistic	Fish Species												Total by Fishing Method	Total No. Species (all methods)

	Gold Creek	57	0%	0%	57	0%	5.3%	0%	5.3%
Redside Shiner (April)	Sand Creek	9	0%	0%	8	0%	11%	0%	11%
	Elk River	16	0%	0%	13	0%	46%	0%	46%
	Gold Creek	10	0%	0%	6	0%	83%	0%	83%
Yellow Perch (April)	Sand Creek	27	0%	0%	26	0%	0.038%	0%	0.038%
	Elk River	38	0%	0%	33	0%	3.0%	0%	3.0%
	Gold Creek	36	0%	0%	35	0%	2.9%	0%	2.9%
All Other Fish Species (February, April, August)	Sand Creek	17	0%	0%	9	0%	0%	0%	0%
	Elk River	15	6.7%	0%	10	0%	0%	0%	6.7%
	Gold Creek	3	0%	0%	1	0%	0%	0%	0%

[a] Parasites found were almost exclusively tapeworms; however, parasitic flukes (*Clinostomum marginatum*) were observed on northern pikeminnow at Gold Creek.

Table F.47: Summary of Externally and Internally Observed Fish Abnormalities at Sand Creek, Elk River, and Gold Creek Study Areas in Koocanusa Reservoir, 2016

Fish Species	Study Area	External			Internal				Total Proportion of Fish with Abnormalities
		Sample Size	Damage to Fins, Eye, Operculum, or Scales	Cysts	Sample Size	Excessive Internal Connective Tissue	Parasites[a]	Irregular Size or Discolouration of Liver or Gonads	
Largescale Sucker (April)	Sand Creek	42	7.1%	0%	32	0%	6.3%	0%	13%
	Elk River	37	0%	0%	33	0%	0%	0%	0%
	Gold Creek	35	0%	0%	31	0%	19%	0%	19%
Northern Pikeminnow (April)	Sand Creek	42	2.4%	0%	39	0%	7.7%	0%	10%
	Elk River	43	0%	0%	41	0%	2.4%	0%	2.4%
	Gold Creek	33	0%	0%	32	0%	3.1%	0%	3.1%
Peamouth Chub (April)	Sand Creek	50	0%	0%	50	0%	38%	0%	38%
	Elk River	56	0%	1.8%	53	0%	23%	0%	24%
	Gold Creek	68	0%	0%	66	0%	23%	0%	23%
Redside Shiner (April)	Sand Creek	43	0%	0%	43	0%	30%	0%	30%
	Elk River	42	4.8%	0%	42	0%	38%	0%	43%
	Gold Creek	44	0%	0%	43	0%	37%	0%	37%
Yellow Perch (April)	Sand Creek	34	0%	0%	34	0%	2.9%	0%	2.9%
	Elk River	35	0%	0%	35	0%	20%	0%	20%
	Gold Creek	42	0%	0%	42	0%	7.1%	0%	7.1%
All Other Fish Species[a] (April, August)	Sand Creek	27	0%	0%	3	0%	0%	0%	0%
	Elk River	30	0%	0%	5	0%	0%	0%	0%
	Gold Creek	10	0%	10%	8	0%	0%	0%	10%

[a] Parasites found were exclusively tapeworms; almost all tapeworms were found in body cavity except one found within the operculum of a largescale sucker in Gold Creek.

33	"	"	PC	33		201	M	Oto.	4	++	(7)	5°		

Note: Some very tough aging especially on older fish. Edges are often difficult because of the shape & surface structure of the otoliths. It is essential to prep both otoliths as often only 1 or 2 halves are assessable.

Sc = 05
Oto = 31.

96	ER	"	PC	20		257	F	Oto.	10	++	(5-6)	11°	True annuli ??	

Note: GC fish pretty good. Jonation is fair to good often on 1 of the 2 otoliths. Good to have both to prep.

Note: ER fish. Some tougher aging in this group. Jonation is tougher to follow than previous areas possibly because these are possibly more older fish.

185	"	April 26	"	33				Ofo.	9	##	(7)	10°		xx

Note: GC-PCC - Very tough aging. GC-NSC - Much better Zonation than PCC. Also more younger fish. Zonation much more reliable on NSC otoliths from Gold Creek when compared to PCC samples.

Notes: In all NSC samples, the edge is often a difficult call. Some ++ fish may be 1 year older. Edges are often corroded off or obliterated by a dark surface layer that makes edge assessment difficult especially if growth is not substantial.

Difficult call on edges.

Similar to Sand Creek and E. Kk River samples. Often poor centres and edges but good mid growth. Sample ages could go two ways by 1 or 2 years. One annulus often tough to sort out.

1.0

				Otoliths OK. - Scales tough to assess. Fine annuli ??									
657	GoldCrk	April 20	WCT	01				Sc	3	*	(6)	3*	2 Scales.
658	"	" 24	WCT	02				Sc	2	++	(6)	3°	2 Scales FCI-2
659	"	"	WCT	03				Sc	2	++	(5-6)	3°	1 Scale
				NO Scales taken - only for 2 to work with?									
		General:		Scales generally not well collected for any of the sports species. With many samples very few, if any scales and often very dirty.									
				Otoliths generally tough to age of Brook Trout & Rainbow trout from these sampling sites. Mountain Whitefish also tough. May want to test to collect fin rays as well as otoliths and scales in future collections from these sites.
